Pan-Head, Phillips Drive

Thread-Cutting Screws

Tapping screws create a zero-clearance, tight fit in hard materials such as plastic, heavy-gauge sheet metal, aluminum, cast iron, brass, zinc, and lead die castings. Meet ANSI/ASME B18.6 standard.

Note: Additional sizes, materials, and slotted drive are available on Grainger.com®.

Self-Tapping Sheet Metal Screws

- Hardened steel
- Hex Washer Head have a ¼" driver size

1-pc., 1-side-installation fasteners penetrate metal and tap their own mating threads to eliminate the need for prepunched holes.

Note: Additional sizes, materials, and slotted drive are available on Grainger.com®.

Size	Length	Item No.	Pkg. Qty.

Hex Washer

w/Neoprene Washer

ITW Buildex

Self-Drilling Hex Washer Sheet Metal Screws

- Package quantities are exact

1-pc., 1-side-installation fasteners have a drilling point tip that drills its own hole and forms its own internal mating threads.

Climaseal corrosion-resistant finish provides excellent resistance to most forms of abrasion and torque.

Electro Zinc corrosion-resistant finish is applied to 36K129.

Gray Spex corrosion-resistant finish on 36K145 is an organic waterborne coating, applied with a state-of-the-art process that eliminates Phillips recess fill problems.

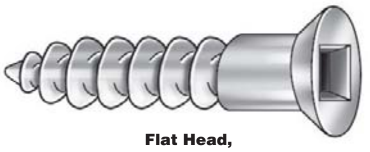
ITW Buildex

Self-Drilling Sheet Metal Screws

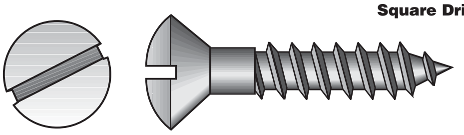
1-pc., 1-side-installation fasteners drill their own holes and form their own internal mating threads.

Climacoat finish prevents rust from bleeding into substrate.

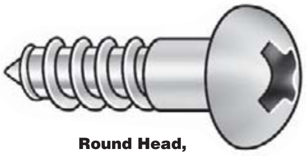
Climaseal corrosion-resistant finish provides excellent resistance to most forms of abrasion and torque.



Flat Head, Square Drive



Oval Head, Slotted Drive



Round Head, Phillips Drive

Wood Screws

- Pkg. 100

For use with wood or other resilient materials.

Meet ANSI/ASME B18.6.1 standards.

Note: Flat head and round head slotted-drive wood screws are also available; on Grainger.com®, search for "wood screws."

Flat-Head Wood Screw

Pan-Head Composite Screw

Driver Bit

Phillips Square-Driv Wood Screws and Bits

- Bit included with each box of screws

Case-hardened, flat-head screws have 35% more steel under the head to prevent snapping. Paintable, stainable Durafast coating will not rust or streak and is corrosion-resistant.

Flat Head, Square Drive

Deck Screws

Coarse thread and Type 17 point make it easier to assemble wood and vinyl decks, or any outdoor wood-to-wood project. Countersunk flat head produces a flat surface area. Number 2 drive size provides superior driving with 4 points of contact.

82° Flat Head

Drywall Screws

Attach drywall or wallboard to metal or wood studs and joists without the need for predrilling. Thread-cutting screws feature a thin shank, deep threads, and a very sharp point. With a #2 Phillips driver, the countersunk bugle head won't tear the surface paper of the drywall. Made of steel with black phosphate finish.

Socket Head Cap Screw Information

Standard
Features a relatively high cylindrical head with a recessed hexagonal socket. Use where maximum tensile strength is essential. See page 2113, 2114, 2115.

Button
Dome-shaped head has wider hex socket and lower profile than standard. Ideal for lighter applications with low limited clearance where loading capacity is not critical. See page 2121.

Flange
Projecting collar around bottom of head acts like a washer, dispersing the load on the bearing surface. Use when a wider bearing surface or a more-finished appearance is desired, and with thinner materials. Go to Grainger.com® and search for "Flange Socket Head Cap Screws."

Flat
Features an 82° countersunk flat head. Flush mounts so moving parts can pass over freely. Not ideal for applications that require optimal antifatigue properties. See page 2119.

Low
Head height is 50% lower than standard size; socket size is smaller. Used in thinner materials and where clearance is too limited to use a full-height cap screw. Cannot withstand the same preloads and standard socket-head cap screws. See page 2121.

Vented
A small hole drilled through the entire length of the cap screw allows gas and fluids to vent. See page 2115.

Min. thread length is calculated using the screw's length. The formula is dia. x 2 + 1/4". For example, 1/4-20 x 4: 1/4 x 2 = 1/2". 1/2" + 1/4" = 3/4". This item would have at least 3/4" thread. Longer than 6" are available at Grainger.com®; search for "hex head cap screws."

CONTINUED

Min. thread length is calculated using the screw's length. The formula is dia. x 2 + 1/4". For example, 1/4-20 x 4: 1/4 x 2 = 1/2". 1/2" + 1/4" = 3/4". This item would have at least 3/4" thread. Longer than 6" are available at Grainger.com®; search for "hex head cap screws."

Nylon locking element is bonded to threads for a firm hold that won't loosen under vibration. Meet ASME B18.3 standards.

18-8 Stainless Steel Vented-Head Cap Screws

Vent gas or fluids through air shaft drilled through entire length of screw. Meet ASME B18.3 standards.

Min. thread length is calculated using the screw's length. The formula is dia. x 2 + 1/4". For example, 1/4-20 x 4: 1/4 x 2 = 1/2". 1/2" + 1/4" = 3/4". This item would have at least 3/4" thread. Longer than 150mm are available at Grainger.com®; search for "hex head cap screws."

Shoulder Screw Information

Also called stripper bolts or shoulder bolts, shoulder screws are used frequently in pulleys and linkages. They also function as precision spacers or guide screws.

SHOULDER SCREW TYPES

Both types of shoulder screws are reusable and come in ISO metric and USS measurements.

Precision (Smooth Head)

Manufactured with more-exacting tolerances. Hex socket drive allows high-torque wrenching. Slotted drive permits deeper access in hard-to-reach places where a hex key can't reach. Phillips drive provides excellent torque control.

Standard (Knurled Head)

Dimensions meet ASME standards for inch sizes and ISO standards for metric sizes. Shoulder dia. tolerances: -0.002" to -0.004". Suitable for use in machinery and other critical mechanical applications. Screws feature a hex socket drive.

SPECIAL VARIATIONS

Hex Head

Allows easy tightening with an adjustable wrench.

Self-Locking

A nylon patch on screw threads bonds with the material being fastened to hold the screw firmly in place and prevent loosening from vibration. Not reusable.

SHOULDER SCREW DIMENSIONS

Standard

Alloy Steel Shoulder Screws

- Hex socket drive
- Knurled head
- Thread class: 3A standard, 5g6g metric
- Tensile strength: 140,000 psi standard, 159,500 psi metric
- Shear strength (metric): 95,700 psi
- Shoulder length tolerance: ±0.005" standard, +0.25mm metric

Metric sizes meet ISO 7379.

Notes: Additional dimensional information, self-locking screws with nylon patch, and additional sizes are available on Grainger.com; search for "shoulder screws."

Metric are 12.9 alloy steel; due to undercut between shoulder and thread, be sure to lower the tightening torque normally used for Class 12.9 screws.

Slotted Drive

18-8 Stainless Steel Precision Shoulder Screws

- Tensile strength: 90,000 psi inch, 80,000 psi metric
- Thread class: 2A
- Shoulder length tolerance: +0.002" inch, +0.050mm metric
- Shoulder dia. tolerance: +0.000/-0.001"

Closer tolerances permit use in critical applications that require greater precision. Undercut beneath the head lets screws mount flush to surface.

Note: 416 SS precision shoulder screws, additional dimensional information, and additional sizes are available on Grainger.com. Search for "shoulder screws."

Set Screw Information

Set screws can be used to prevent relational motion of permanently located parts. They are typically used in electronics and for applications where space is a key concern.

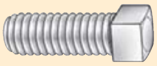
Set screws feature these key characteristics:

- A hexagonal socket recessed in one end, or an external square or slotted head
- A point designed to bear against a mating part at the opposite end
- Threads extending the entire length of the shaft

HEAD TYPES

Hex Socket
Recessed drive makes screws ideal for flush mounting.

Slotted
Single slot for driving with a standard screwdriver.



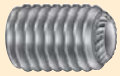
Square
Enables external wrenching of the screw. Use in environments in which grease or dirt might clog a recessed drive.

POINT TYPES

Cone
Pointed end generates highest torsional holding power in applications where parts must be permanently located. See page 2128.

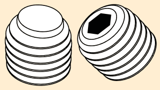
Cup
Cup-shaped point features a conical depression for excellent holding power with slight penetration. See page 2126.

Flat
Minimizes shaft damage in applications where parts are frequently reset or when fastening into thin walls. See page 2130.



Knurled Cup
Provides more resistance to vibration than a plain cup point. Deep socket broach assures a good hex key fit. See pages 2128.

Oval
Rounded point reduces indentation and prevents deformation of parts in applications requiring frequent adjustment.



Half-Dog
Used for permanent setting of parts and can replace dowel pins when hole is threaded. Works well against hardened members or hollow tubing.

Rivet Information

RIVET TYPES

Open-End—Retains the mandrel head within the body of the rivet. A strong, cost-effective alternative to tubular rivets in industrial applications with materials that do not have high load-bearing requirements. Go to Grainger.com® and search for "open-end rivets."

Closed-End—Provides greater shear and tensile strength over open-end rivets of similar sizes and materials. Seals liquidtight, with 100% mandrel retention. Go to Grainger.com® and search for "closed-end rivets."

Blind—Designed for blind-side applications where only 1 side of the material is accessible. Will not mar or scratch painted or other finished materials. See pages 2131, 2132, 2133, 2134.

HEAD TYPES

Dome—Provides a low-profile finished assembly.

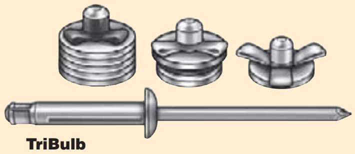
Large Flange—Provides greater bearing surface for fastening soft and brittle material. Also great to cover enlarged holes or slots.

TriBulb—Large blind-side footprint allows use in oversize holes. Use with both soft and brittle materials.

Closed-End

Domed

Large Flange



TriBulb

Multigrip

OTHER RIVET TYPES

See grainger.com/fasteners for our expanded rivet selection including the following.

Push-In

Usually made of nylon, push-in rivets expand to lock material into holes. Use on soft or hard materials.

Tubular/Semitubular

Rivets can be used to fasten soft and hard materials.

Tubular rivets have a hole in the headless end. Most commonly used in self-piercing applications where a predrilled hole is not required.

Semitubular rivets are similar to tubular rivets, but require much less insertion force.

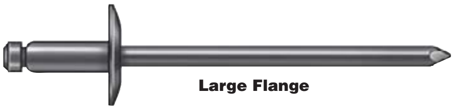
Solid

1-pc. fasteners are permanently set using a hammer or rivet press, and expand in the hole to securely lock parts together.

Split

Used to fasten soft materials together. 2 legs pierce the material and then fold over to fasten.

Domed



Large Flange

Blind Rivets

POP® Avdel®

Blind rivets have 2 parts: the rivet and the mandrel. The rivet fastens to the materials, and the mandrel is used to set the rivet and then is discarded.

Note: Countersunk, button, and structural domed rivets are available on Grainger.com®; search for the head type, such as "countersunk rivets."

Rivet Nuts

Once installed, nuts provide permanent, captive threads that won't loosen when vibrated, or rotate when attached to the mating material. Large-flanged head allows increased push-out strength and extends above the material to provide built-in spacer.

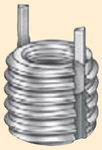
Threaded Inserts Information

Helical Wire Thread Insert
Converts threads, repairs stripped threads, or creates long-lasting threads in multiple materials

Knife Thread Insert
Provides sturdy machine threads in hardwood

Hex Drive Thread Insert
Provides sturdy machine threads in soft woods

Key Locking Thread Insert
Use to convert or repair threads with a positive mechanical lock that prevents spinning



Self-Locking Thread Insert
A locking adhesive on the external threads locks the insert in to place

Press Insert
Provides sturdy machine threads in plastic materials

Helical Wire Thread Inserts HeliCoil®

Free-running and locking internal designs are different. Nitronic® 60 stainless steel inserts are a lower-cost alternative to cobalt-bearing and high nickel alloy, with better corrosion resistance than Type 304 in most media, better chloride pitting resistance than Type 316, and nearly twice the yield strength of Types 304 and 316. Screw thread insert taps sold separately on page 2141.

Free-Running—Greater in diameter than tapped hole; compress when installed. Inserts evenly distribute load and stress.

Screw Locking—Eliminates backout of installed fastener from stress and vibration. Locking torque is retained over numerous assembly cycles.

Internal Thread Size	Length*	Free Coil Dia.	Drill Size	Insert Tap	Brand	Pkg. Qty.	INSERTS FREE RUNNING Item No.	INSERTS SCREW LOCKING Item No.

HeliCoil® RECOIL QUALITY THREAD INSERT SYSTEMS

Screw Thread Insert Taps

STI taps are oversized from standard taps to allow for the wire insert once installed. High-speed, steel intermediate (plug) lead taps cut threads to a precise dimension.

Note: Additional sizes are available; go to Grainger.com and search for "Screw Thread Insert Taps".

2 Locking Key

4 Locking Key

Key Locking Thread Inserts

- For metal applications; not recommended for cast iron or brittle material

Repair damaged threads with a positive mechanical lock, preventing rotational spinout from vibration or torque.

Note: Units measured in inches have an internal thread class of 3B and an external thread class of 2A. Metric units have an internal thread class of 6H and an external thread class of 6G.

Stainless steel and key locking thread insert installation tools are available on Grainger.com®; search for "stainless steel key locking thread inserts" or "key locking thread installation tools".

Well-Nut

Jack Nut

POP® Avdel®

Threaded Inserts

Jack Nut—For use in thin, soft, or brittle materials. Can be set with manual or pneumatic tools. Steel material. Removable.

Well-Nut—Flanged bushings have a brass machine nut molded on to 1 end. Seal against moisture and gases and help prevent galvanic corrosion. For isolating against shock-and-vibration and electrical conductivity. Rubber, chlorophrene material. Removable.

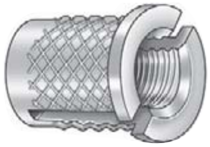
Diamond-Knurled, Flush

Diamond-Knurled, Flanged



Reverse Slot

Press Inserts

- Use in plastic

Note: Stainless steel are available; on Grainger.com®, search for "stainless steel press inserts."

Diamond-Knurled—Inserts are installed cold, eliminating the need to chase threads. For blind and through holes; install with a hammer or arbor press.

Reverse Slot—Reverse slot puts head on the back side of the part for greater pull-out resistance. Simply drill or mold hole and press into place.

Hex Drive Thread Inserts

- Die cast zinc alloy
- Use with soft woods, composition board, and MDF
- Install with a standard hex key or power driver

Flush models are for installation on curves or below surfaces. Flanged models help control the insert depth. For knock-down furniture, shipping crates, and cabinetry.

E-Z LOK

Self-Locking Thread Inserts

- Carbon steel

Adhesive on the external threads activates immediately after installation, locking the insert into place and sealing against liquids and gases to pressures of 6000 psi.

Note: Internal thread class for internal thread sizes is 2B; 6H for metric sizes. External thread class for external inch thread sizes is 2A; 6G for metric sizes.

303 stainless steel available; on Grainger.com®, search for "303 stainless steel self-locking thread inserts."

Double-End Threaded Stud w/Hex Shank

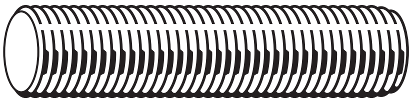
Threaded Rod and Threaded Stud Information

Threaded Rods—Headless, fully threaded metal bars are available in stock lengths of 1 ft. to 12 ft. Cut to length with a hacksaw or power band saw.

Threaded Studs—Headless metal rods are precut to standard lengths as short as ¼". Can be threaded on 1 or both ends, or along entire length.

Fully Threaded Studs—Threaded the entire length with conventional threads. Commonly used with a nut on either end to clamp 2 parts together.

Double-End Studs—General term for studs with an unthreaded portion in the middle and threads on both ends. Also known as stud bolts.



Threaded Rods

- Right-hand thread

Fully threaded rods can be used for hanging, mounting, bracing, supporting, and fastening in plumbing, heating, electrical, construction, and fabrication applications.

Note: Additional lengths and materials are also available; go to Grainger.com® and search for "Threaded Rods".

Nylon Fully Threaded Rods

- Class 2A to 2B threads
- Temp. range: -40° to 185°F
- Off-white color

Meet IFI standards.

Note: Metric and black nylon fully threaded rods are also available; on Grainger.com®, search for "black nylon fully threaded rods."

MAULDIN PRODUCTS MW Industries, Inc.

PTFE-Coated Fully Threaded Studs

- B7 alloy steel
- Tensile strength: 125,000 psi

Fluoropolymer coating prevents galling and seizing. Assembled with 2H hex nuts. Meet ASTM A193 standards.

Threaded Rod Hangers

- Heat-treated, case-hardened steel
- Zinc-plated for corrosion resistance

Hardened steel prevents snapping during installation or in high-stress environments 1-pc. design ensures a strong hold between screw and connector.

Notes: Nut drivers sold separately, this page.

Threaded rods are sold separately; see pages 2144, 2145.

SAMMYS®

UNC anchors can be used to hang threaded rod from wood, steel, concrete, and metal deck. Color-coded to make it easy to select the correct-size Sammys nut driver; sold separately, this page.

Sammy X-Press—Anchors expand upon installation to stay in place without a retaining nut, for use where the back of the installed fastener is not accessible. Install quickly with Sammy X-Press It Installation Tool 36C177, sold separately, this page.

DEWALT®

Wood and Steel hangers require no pre-drilling. Wood hangers have a Type 17 gimlet to help reduce splitting. Concrete hangers 54PD63, 54PD64, and 54PD65 are internally threaded; 54PD61 and 54PD62 have external ⅜" thread for direct attachment to anchors.

STRONG-TIE®

Install quickly with no special installation tools. Hanger anchor 4XFX3 is designed for hanging installations. Coupler anchor 4XFW8 is designed for concrete foundations.

ROD HANGER DRIVERS AND EXTENSION ROD

Sammys® drivers are color-coded by size for quick selection on the job.

Weld Studs

All studs have right-hand thread direction. Steel material.

Bottom Projection—Styles offer a smooth, finished appearance on the outer surface.

Top Projection—Styles can be assembled into a prelocated hole.

Right Angle—Flat spade head style allows the installer to use various sizes of electrode tips and can be used when an offset is required.

Standard Clevis Pins

Flat-headed pins have a hole drilled in the opposite end. All pins meet ASME B18.8.1 standards.

Note: 316 stainless steel and plain finish steel clevis pins are also available; on Grainger.com®, search for "clevis pins."

Dowel Pins

Note: A1 metric, 416 and 18-8 stainless steel dowel pins are also available; on Grainger.com®, search for "dowel pins."

Plain Alloy Steel
- Length tolerance: ±0.012"

Hardened Steel Metric—Solid cylindrical pins are chamfered on 1 end for easy insertion and feature a smooth radius on the other end for easy removal. Meet DIN 6325/ISO 8734A m6 standard.

416 Stainless Steel Metric Dowel Pins
- Length tolerance: +0.5/-0.0mm

416 Stainless Steel—Meet MS16555, ASTM A380.
- Length tolerance: ±0.010"

Carbon Steel Coiled Spring Pins

Reusable pins absorb and distribute shock-and-vibration throughout the pin cross-section. Meet ASME standard.

Note: 420 stainless steel are also available; on Grainger.com®, search for "coiled spring pins."

E-Style External Retaining Rings

Provide a large shoulder on small-diameter shafts. Snap directly into deep grooves from the side of the shaft to ensure extra thrust capacity. Inch-system rings meet ASME standard; metric-system rings meet DIN standard.

Note: Zinc-plated steel retaining rings are also available; on Grainger.com, search for "retaining rings."

Spiral Retaining Rings

Provide 360° coverage of the retained surface. Unique circumferential metal structure provides exceptional strength, stability, and even distribution of thrust loads. Wound from pretempered flat wire to exact tolerances. Meet ANSI standards.

Note: Additional sizes are available on Grainger.com; search for "retaining rings."

Self-Locking Retaining Rings

- Stainless Steel

Designed to push onto ungrooved shafts and bores. No groove required; frictional force is used to retain assemblies. Once installed, rings self-lock and are difficult to remove.

Spring Information

SPRING TYPES

Compression

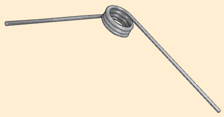
Shorten under load to absorb impact, apply pressure to surfaces, or protect against the effects of shock. See pages 2159 and 2160.

Disc

Convex discs generate high force within a very short length. Discs can be used singly or stacked in numerous combinations to achieve desired load and travel with minimal movement. See grainger.com/fasteners.

Extension (Tension)

Expand and elongate under load and have a hook, eye, or some other means of attachment at either end to allow attached pieces to give way and absorb impact, shock, or other forces. See page 2158.



Torsion

Ends rotate in angular deflection to offer resistance to externally applied torque. Commonly used over an arbor or mandrel for support, and in other applications where pressure needs to be maintained over a short distance. See page 2159.

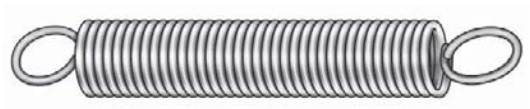
Utility Extension Springs



For use with OEM or maintenance and repair applications. Crossover center loop ends. Type 302 stainless steel meet ASTM A313 and AISI Type 302/304 standards. High carbon steel meet ASTM A227 standard.

Note: Additional sizes and ultra-precision extension springs are available on Grainger.com; search for "extension springs" or "ultra-precision extension springs."

Precision Compression Springs

Manufactured to tighter load and dimensional tolerances.

Note: Additional sizes are available; on Grainger.com, search for "precision compression springs."

Type 302 Stainless Steel—Springs offer better corrosion resistance and perform well at up to 500°F. Meet ASTM A313 standards.

NAAMS Series Die Spring

ISO D Die Spring

Raymond™

Die Springs

High-strength chromium alloy steel springs have ground square ends and are color-coded by duty performance for easy sorting and selection when replacement is needed. ISO D Die Springs are manufactured to ISO10243 standards and are designed to be interchangeable with other manufacturers' springs of the same size, type, and color.

Note: Additional sizes, materials, and slotted drive are available on Grainger.com®.

Utility Compression Springs

Excellent for static or low-cycle applications. For spring stock, determine spring rate by dividing the spring constant by the total number of coils used once the spring has been cut to the desired length. Meet ASTM A227 standard.

Note: Additional sizes are available; on Grainger.com®, search for "compression springs."

Anchor Information

DEFINITIONS

Minimum Embedment—Minimum depth in which the anchor must be set to function properly.

Tension Strength—Ultimate parallel load an anchor can withstand before pulling out of the base material.

Shear Strength—Ultimate perpendicular load an anchor can handle before breaking.

ANCHOR TYPES

Wedge

Fully threaded masonry with stud bolt body, split expansion ring, integral cone expander, nut, and washer. Use to fasten fixtures to a solid base material. See page 2162, 2163, 2164.

Drop-In

Internally threaded, shallow embedment anchors preassembled with an internal expansion plug for use in concrete. See page 2166.

Sleeve

Threaded stud with an outwardly flared cone-shaped end. Use to fasten steel, aluminum, wood panels, doors, framing, and shelving to concrete. See page 2165.

Expansion

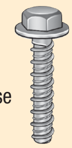
Provide quick installation of lightweight fixtures in masonry and concrete. Use with lag, wood, or sheet metal screws. See page 2163.

Stud

Use to anchor pipe run supports, blowers, pumps, and support racks. Bottom-bearing is for jacking and leveling items. See page 2163.

Hammer-Drive

Nail-like devices consisting of an expander drive pin and an expansion sleeve. Used to anchor items to brick and concrete surfaces. See page 2168.



Self-Threading

Removable structural anchors work in concrete or hollow block. For high-load capacity applications. See page 2167.

Masonry

Excellent for wood-to-concrete applications. Notched high-low threads cut into masonry for stability; tapered shank provides wedging action for a strong hold. Can be removed and reinstalled. See page 2167.

Hollow-Wall

For use in thin or hollow base materials like concrete block, drywall, paneling, or plaster. See pages 2168, 2170.

Drywall

Self-drilling anchors preserve drywall integrity at installation, and stay in place while screws back out easily. See page 2170.

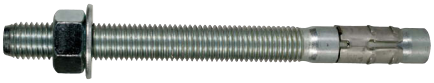
Strong-Bolt 2 Seismic Wedge Anchors



SIMPSON Strong-Tie

- Category 1 Anchor Classification
- Static tension and shear loading in cracked and uncracked concrete

Use in all structural applications, including racking, equipment shelving, bracing, and seating. Use in static, seismic, and wind loading applications. Comply with ICC-ES ESR-3037.

Tested per ICC-ES AC193 to meet current cracked concrete anchor codes.

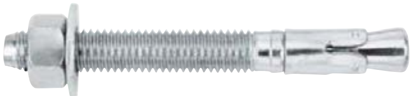
Seismic Wedge Anchors



DEWALT ENGINEERED BY Powers

- Zinc-plated carbon steel

Use in Category 1 cracked and uncracked concrete. Include nut and washer. Meet or exceed IBC, IRC, and Florida Building Code. UL Listed; FM Approved.

MKT

Sup-R-Stud Grade 5 Wedge Anchors

- Yellow, dichromate steel
- Non-seismic rated

Can be used for immediate setting and loading. Yellow electroplating permits easy recognition after installation. Commonly used in conveyor systems, pipe hanging, racking, machinery, and anchoring. Include nut and washer. Meet Federal G.S.A. Specifications FF S-325C Group II, Type 4, Class I.

Note: Safe working loads should not exceed 25% of ultimate values.

Expansion Shield

MKT

Expansion Shields and Anchors

- Min. embedment equals anchor length

Note: Screw length needs to be at least the length of the anchor plus the thickness of the material.

Expansion Shields—Medium to heavy loads in dead, variable, or vibratory conditions in all types of masonry and natural stone.

Expansion Anchors—Lead anchors provide quick installation of lightweight fixtures in masonry and concrete. Not affected by chemicals or moisture.

Trubolt Wedge Anchors

- For use in concrete
- For increased load value, use deeper embedment
- Non-seismic rated

Fully threaded with 1-pc. wraparound stainless steel expander clip. For continuous low-temperature applications, use stainless steel anchors. Include nut and washer. Stainless steel anchors meet U.S. Government A-A-1923A Type 4.

Note: Safe working loads for single installations under static loading should not exceed 25% of the ultimate load capacity.

Wedge And Epoxy Style Anchors

Wedge Style Drop-in Anchor

Epoxy Grip Anchor

- Zinc-plated steel
- Internally threaded
- Sold each

Wedge-Style Drop-In—With more holding capacity than standard drop-in anchors, wedge-style anchors can be used in a bottomless hole. There are no protruding studs to mar surfaces when removing or replacing. Require no special setting tools. Excellent for pipe work, equipment brackets, and handrails.

Epoxy Grip—Set in-place with adhesives for stress-free anchoring that remains stress-free until force is applied to the bolt. Use in strength design applications, or where close edge distance is required, such as when installing handrails in concrete ramps, etc.

Note: Load values as listed are derived by using MKT VMZ adhesive only.

Sleeve Anchors

Filler sleeve eliminates galling between sleeve and tapered bolt head. For concrete, hollow or shallow masonry, or grout-filled blocks. Include nut and washer. Red Head Meet U.S. Government A-A-1922A standard.

Taper Bolt Expansion Anchors with Nuts

Removable, reusable bolts include a finished, low-profile hex head. High tensile strength allows users to substitute smaller bolts, for reduced cost. Uniform expansion provides greater strength and holding power.

Drop-In Anchor, Non-Flanged

RED HEAD CONCRETE ANCHORING SYSTEMS

DEWALT ENGINEERED BY Powers

MKT

Drop-In Anchors, Tools, and Kits

- Drop-in anchor setting tool must be purchased separately (see table)

For use in pipe hanging, mounting valve and pipe, machinery mounting, anchoring shelf, and insulation applications, in concrete materials or solid concrete base materials.

Note: For load capacities in structural lightweight aggregate concrete, refer to ICBO Report number 1372. Safe working loads for single installations under static loading should not exceed 25% of the ultimate load conditions.

Screw Anchors

- Steel
- Drill bit size = anchor dia.
- Hex washer head

High-strength heavy-duty anchors are for use in both cracked and uncracked concrete. Easily installed with standard-size drill bits; removable, for temporary anchoring. Vibration- and shock-resistant. For use in fastening conveyors, pallet racking, racking guards, motors, bracing, piping, ladders, fencing, beams, angles, or dimensional lumber to concrete or masonry.

RED HEAD CONCRETE ANCHORING SYSTEMS

Large-Diameter Tapcon Self-Threading Anchors

- Grade 5 zinc-plated, hardened steel

Removable structural screw anchors are for high-load capacity applications. Use in concrete and masonry and in dry, noncorrosive environments. Install with standard masonry drill bits.

RED HEAD CONCRETE ANCHORING SYSTEMS

Masonry Anchors

- For wood-to-concrete applications

Easy-to-install anchors can be quickly removed. Notched high-low threads cut into masonry for greater stability and pull-out values.

Tapered shank provides a wedging action for a strong, reliable hold. Accommodate close-to-edge applications. Superior pull-out and shear strengths.

Note: Not recommended for use with aluminum when moisture may be present.

Concrete Deck Inserts

- Steel construction with zinc plated finish
- 8" length
- 12" flange width

Inserts have pre-mounted self-drilling screws and a lengthened "T" brace, to allow simple and easy installation in concrete-filled metal deck assemblies, in a variety of positions. A threaded bolt permits precise height adjustment and helps guarantee the minimum embedment depth. UL Listed. Meet ICC-ES, ESR-3958, IBC 2009, 2012, 2015, IRC 2009, 2012, 2015, FM standards.

Crimp-Drive

Split-Drive

Hammer Drive

Mushroom Head

Tie-Wirehead

Flat Head

Crimp, Hammer, and Split-Drive Anchors

Tamper-resistant light- to medium-duty anchors allow hammer-in installation and multiple head configurations. Install in concrete, grout-filled block, and stone. Duplex-head anchors are for temporary fastening and can be removed using a claw hammer. Sup-R-Coat electroplate and galvanized finishes are for use in corrosive environments, or with ACQ lumber.

Crimp Drive—Preformed curvature along shaft expands to secure anchor. Installs with a standard hammer into concrete and grout-filled block.

Sup-R-Split Hammer Drive—High-strength, heat-treated 1-pc. steel anchors are hammer-drive, friction-set; can be used for attaching wood or forming to solid concrete.

Note: Not approved for use in seismic applications.

Split-Drive—Install in concrete, grout-filled block, and stone. Duplex-head anchors are designed for temporary fastening and can be removed by using a claw hammer.

Shower Rod Anchor 6UTD3

Grab Bar Anchor 6UTC7

WingIts® The Solutions Company

Shower and Grab Bar Anchors

Shower Rod Anchor—Use with crescent and oval curved shower rods when there is insufficient structural blocking. Installs quickly into any hollow wall substrate up to 1¼" thick. Made of fire-retardant plastic material. Includes 4 stainless steel screws, 4 wings, and waterproof adhesive tape.

Grab Bar Anchors—Watertight installation eliminates blocking, even over grout lines in drywall with tile. 6UTC8 is rated up to 600 lb. and 6UTC7 is rated up to 800 lb. Each includes stainless steel screws. Meet ADA guidelines and commercial building codes. Installation into bare ½" drywall is not compliant with commercial building codes.

Wall and Tile Drill Bits and Sets—Precision bits cut fast, clean holes to install anchors in ceramic wall tile, wallboard, glass, steel, marble, and plaster. Made of industrial carbide.

Hollow-Wall and Drywall Anchors

Hammer-In Drywall Anchors—Install with no drilling necessary. Easy to remove, leaving only a tiny slit of a hole. Include anchors and screws. Meet ASTM E488 standard.

Hollow-Wall Anchors—Heavy-duty hollow-wall plastic anchors are designed for use in plaster, wallboard, concrete block or hollow tile. Feature 5/16" drill size and easily adjust to accommodate wall thickness up to 2½" when using a short bolt.

MASTER Anchor Hollow Wall Anchors—Structural plastic and stainless steel anchors secure objects up to 300 lb. in drywall and will work in holes created by other anchors' failure. Objects can be easily repositioned without loss of anchor integrity. Each includes faceplate, tape, and wings.

8-32 Thread Size supports most bathroom accessories. Can also be used for guest room window dressings, heavy drapery rods, shelving, cabinets, pedestal sinks, dispensers, coat hooks, railings, and most wall-mount accessories with 1" base or larger.

10-32 Thread Size supports low-profile or tilting-mount flatscreen TVs, bathroom partitions, commercial products, and electrical panel boxes.

Self-Drilling Drywall Anchors—Preserve drywall integrity at installation and when screws are removed. Deep thread provides strong engagement in 3/8", 1/2", and 5/8" drywall. No predrilling or hole preparation necessary. Can be easily backed out.

- For plastic use #8 sheet metal screws

Countertop Equipment 12C141

QUAKE HOLD!

Seismic Bracing Fasteners

Earthquake fasteners secure file cabinets, top heavy furniture, lab equipment, hospital equipment and office equipment that is required for IBC compliance.

FLOOR-MOUNT

Corner bracket is used for equipment with round/square legs or corners without legs. Z-brackets are used with equipment that have adjustable legs. Ratchet straps are used for multidoor refrigerators, freezers, and large floor equipment.

WALL-MOUNT

Flammable cabinet strut fastener secures flammable and toxic corrosive cabinets to wall stud. Wall strap is used for copiers and medium-size equipment. File cabinet strap is used for file cabinets, storage cabinets, and other types of similar cabinets. Ganging file cabinet straps are used for ganging file cabinets and similar cabinets together. Equipment wall straps are used for strapping kitchen refrigerators, freezers, and other similar sized items. Cart-to-wall are used for carts, metro racks, and tubular furniture. Strut straps secure refrigerators, freezers, and similar items. Adhesive plate assemblies secure large counter top equipment, refrigerators, and freezers. Steel furniture cable secures tall and top-heavy furniture to wall.

COUNTERTOP

Equipment fasteners are used for countertop and desktop equipment. HPLC Stack fastener kits are used for countertop and desktop stacked equipment. Lasso Strap fasteners are used for countertop and desktop pedestal equipment.

SPECIALTY

Gel pad seismic fastener is used for flat-bottomed equipment weighing less than 25 lb.

RED HEAD CONCRETE ANCHORING SYSTEMS

Anchor Adhesives and Applicators

A7 Acrylic—All-weather formula holds tight at low temperatures. Fast-curing adhesive works in 35 min. at 60°F. Product is not ration mix-sensitive and is ideal for use in damp holes and underwater applications. Single formula for both hollow and solid base materials. Nondrip, nonsag, easy cleanup. Temp. range: 0° to 110°F.

Description	Item No.
Anchoring Adhesives	
A7 Acrylic, 10 oz.	53TX69
A7 Acrylic, 28 oz.	53TX70

Spin-in Capsule

Stud Assembly

MKT

Chemical Anchor Capsules and Stud Assemblies

- Cure time: 10 to 20 min.
- Mixing ratio 7:1

Premeasured adhesive can be double stacked and requires no installation tool. Glass capsules are made from polyester resin, quartz sand, and benzoyl peroxide hardener. Sand and aggregate mixture is closest to natural concrete. Spin-In are for chamfered threaded rod and rebar. Stud assemblies are zinc-plated carbon steel.

O-Ring Information

DEFINITIONS

AS568 Dash Number—A universal standard that defines the sizes and tolerances for O-rings.

Durometer/Hardness—Elastomer material hardness is referred to as "durometer" within a material, the higher durometer number, the harder the material.

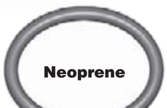
36	500	70 Shore A	1.5mm C/S (20) 5mm, (15) 13mm, (10) 16mm; 1.6mm C/S (20) Each of 2.2mm, 3.1mm, 4.1mm, 7.1mm, (15) 9.1mm, 10.1mm, 13.1mm; 2mm C/S (20) Each of 4mm, 6mm, (15) 8mm, 9mm, 10mm, 12mm, (10) 14mm, 16mm, 19mm, 20mm; 2.4mm C/S (15) Each of 4.3mm, 5.3mm, 5.6mm, 7.6mm, 8.3mm, 8.6mm, (10) Each: 1.5x16mm, 2x14mm, x16mm, x19mm, x20mm; 2.5mm C/S (10) Each of 10mm, 13mm, 14mm, 15mm, 17mm, 18mm, 19mm; 3mm C/S (10) Each of 9mm, 10mm, 11mm	**1RGY3**
37	485	70 Shore A	AS568A Dash No. (32) Each of 006 to 012, (12) Each of 110 to 116, (9) Each of 210 to 222, (6) Each of 325 to 334	**1RGZ3**
81	1,415	90 Shore A	AS568A Dash No. 1⁄16 in C/S (25) Each of 006 to 018, (20) Each of 019 to 021, (15) Each of 022 to 026, 028, (10) Each of 029, 030, 3⁄32 in C/S (25) Each of 109 to 118, (20) Each of 119, 120, (15) Each of 121 to 127, (10) Each of 128, 129, 131, 133, (5) 135, 1⁄8 in C/S (20) Each of 210 to 214, (15) Each of 215 to 222, (10) Each of 223, 224, 226, 228, 232, 236, Boss (25) Each of 904, 907, 908, 910, (15) Each of 903, 906, 912, (10) 916, Flange Fitting O-Rings (10) Each of Flange Numbers 8, 12, 16, (5) Each of Flange Numbers 20, 24, 32	**5JJT8**
150	1,110	70 Shore A	AS568A Dash No. (20) Each of 001 to 016, (15) Each of 110 to 116, (10) Each of 017 to 024, 117 to 124, 210 to 216, (7) Each of 025 to 031, (5) Each of 032 to 043, 125 to 142, 217 to 229, 325 to 328, 901 to 914, 916, 918, 920, 924, 928, 932, (4) Each of 329, 339, (3) Each of 143 to 146, 230 to 232, (2) Each of 044 to 046, 147 to 151, 233 to 237, 331 to 338	**1RGX7**
Buna N and Viton(R)				
19	1,168	70 Shore A and 75 Shore A	AS568A Dash No. (65) Each of 006 to 012, (12) Each of 110 to 116, (9) Each of 210 to 214	**1RGY9**
24	610	70 Shore A	AS568A Dash No. Buna N (40) Each of 012, 013, 110, 112, 113, (30) Each of 007, 014, 016, 115, 214, (25) Each of 010, 011, 111, 116, 210, 211, (20) Each of 120, 212, 216, (10) Each of 218, 220, 222, 326, Viton (10) 120	**2NRY7**
PTFE				
36	325	55 Shore D	AS568A Dash No. (15) Each of 005 to 012, (10) Each of 013 to 018, 110 to 116, (5) Each of 117 to 121, 210 to 219	**1RHA1**
36	325	55 Shore D		**1RGZ7**
Silicone				
36	436	70 Shore A	AS568A Dash No. (25) Each of 005 to 011, (15) Each of 012, 110, (10) Each of 013 to 018, 111 to 116, 210, 211, (7) Each of 117 to 121, 212 to 219	**3CVZ8**
Viton(R)				
20	212	90 Shore A	AS568A Dash No. (12) Each of 905 to 910, (10) Each of 901 to 904, 911 to 914, 916, 918, 920, 924, 928, 932	**1RGY6**
30	180	75 Shore A	AS568A Dash No. (10) Each of 006 to 012, 110 to 114, (5) Each of 115 to 116, 210 to 215, (2) Each of 216 to 222, 325 to 327	**1RGY4**
33	461	75 Shore A	AS568A Dash No. (32) Each of 006 to 012, (12) Each of 110 to 116, (9) Each of 210 to 222, (6) Each of 325 to 330	**1RGZ2**
36	436	75 Shore A	AS568A Dash No. (25) Each of 005 to 011, (15) Each of 012, 110, (10) Each of 013 to 018, 111 to 116, 210, 211, (7) Each of 117 to 121, 212 to 219	**3CWA3**
36	500	75 Shore A	1.5mm C/S (20) Each of 5mm, (15) 13mm, (10) 16mm; 1.6mm C/S (20) Each of 2.2mm, 3.1mm, 4.1mm, 7.1mm, (15) Each of 9.1mm, 10.1mm, 13.1mm; 2.0mm C/S (20) Each of 4mm, 6mm, (15) Each of 8mm, 9mm, 10mm, 12mm, (10) Each of 14mm, 16mm, 19mm, 20mm; 2.4 mm C/S (15) Each of 4.3mm, 5.3mm, 5.6mm, 7.6mm, 8.3mm, 8.6mm; 2.5mm C/S (10) Each of 10mm,13mm, 14mm, 15mm, 17mm, 18mm, 19mm	**1RGY7**
150	1,110	75 Shore A	AS568A Dash No. (10) Each of 210 to 216, (7) Each of 025 to 031, (5) Each of 032 to 043, 125 to 142, 217 to 229, 325 to 328, 901 to 914, 916, 918, 920, 924, 928, 932, (4) Each of 339, 329 (3) Each of 143 to 146, 230 to 232, (2) Each of 044 to 046, 147 to 151, 233 to 237, 331 to 338	**1RGY5**



PTFE and Neoprene O-Rings

- PTFE operating temp.: -300° to 500°F
- Neoprene operating temp.: -40° to 225°F

Round cross-section. Neoprene O-rings meet SAE J200 and ASTM D2000 standards.

Note: Polyurethane and FEP encapsulated O-rings with silicone or Viton® are also available; on Grainger.com®, search for "polyurethane O-rings", "FEP encapsulated with silicone O-rings", or "FEP encapsulated with Viton® O-rings."

Buna N and Viton O-Rings

Standard O-rings can be used for sealing valves, faucets, engines, machines, and more. Round cross-section. Medium-hard. Meet SAE J200, ASTM D2000.

Note: Additional O-ring durometers and materials available; on Grainger.com, search for "Buna N 90 durometers O-rings", "Viton 90 durometer O-rings", "Silicone O-rings", or "EPDM O-rings."

Key Stock Information

KEY STOCK

Step (Offset)

Precision milled with steps notched in at regular intervals for repairing sprockets, gears, and pulleys.

KEYS

A key is a small metal block or wedge inserted between a shaft and the hub of a pulley, gear, sprocket, or other rotating power device. The key provides driving torque and prevents movement. One part of the key fits into a precut slot in the shaft called a key seat. The remainder slides into a groove in the hub called a keyway.

Machine

Elongated keys feature rounded ends, square ends, or tapered gib heads.

Woodruff

Flat, semicircular keys that rock into place and adjust to an angular spine without coming unseated.

Key Stock Assortments

ITW Bee Leitzke

Packaged in a sturdy standable chipboard container.

No. of Pieces	Material	Includes	Item No.

Woodruff Keys

- Tensile strength: 72,000 psi
- Length tolerance: +0.000 to -0.010

Made of medium carbon steel. Remountable machinery keys can withstand great strain; designed to be installed deep into shafts and firmly embedded.

Step Key Stock

Zinc-plated 1018 grade carbon steel key stock works on couplings, sheaves, sprockets, and pulleys.

Use Type 1 for repair and salvage of damaged keys in shafts.

Use Type 2 when mating mismatched keyways, gears, and shafts.

A	B (Dimensions)	C	D	Item No.

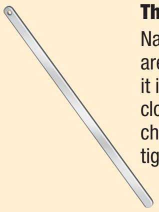
Shim Information

Shims are precisely gauged in multiple thicknesses to provide accurate spacing for a variety of uses:

- Equipment leveling during installation
- Tool and die setup and alignment
- Machine assembly, repair, and maintenance
- Mounting, leveling, and aligning motors and pumps

SHIM TYPES

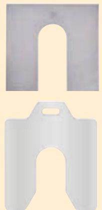


Thickness Gauges
Narrow shims that are used whenever it is required to set close spacing or to check extremely tight tolerances.

Roll

Sheet

Shim Stock
Easy to form and fabricate, shim **Rolls** or **Sheets** can be cut, stamped, bored, milled, sheared, and drilled into almost any shape required to make custom shims.



Slotted Shim

Slotted Shim with Tab

Slotted Shims
Help solve alignment and leveling problems, and eliminate misalignment of expensive machines. End tabs help prevent workers from placing hands under machinery.

PRECISION BRAND

Plastic Shim Stock

- 14-Pc. Sheet Assortment
- Contain 1 pc. of each thickness
- Easy to cut, oil-resistant, and nonconductive to electricity

Each thickness is indicated by a different shim color. Thickness tolerances to industry standards. Use for gaskets, special parts, and various manufacturing applications.

A-2"x2", Full Kit 260 pcs. 36D703

Slotted Shim Assortments

Used for aligning and leveling equipment. Hardened 302/304 stainless steel material resists rust and corrosion. Sizes A to D have a tab for easy gripping. Sizes E and H are not tabbed. 260-pc. and 130-pc. kits come packed in a latching metal box. 80-pc. kits come packed in a sturdy reusable carton.

MAUDLIN PRODUCTS. MW Industries, Inc.

Shim Stock Assortments

Slotted shims 0.001" through 0.031" have the tightest tolerances the industry can provide. Sizes 0.050" through 0.125" are made from re-rolled material, which reduces thickness tolerances to ±0.002". To prevent soft foot problems, 0.050" through 0.125" shims are quality processed to ensure flatness.

Tool Steel—Drill Rods

- Length: 36"
- Length tolerance: +.125"/-.000"
- Standards: UNS T30102, SAE J437, ASTM A-681-94, FEDERAL QQT-570 REV C

A2 Grade is used to replace 01 Grade for applications requiring safer heat treatment, less distortion during hardening, and greater wear resistance. Exhibit less movement during heat treating. 01 Grade provides dimensional stability (low movement) during hardening and high hardness response from low quenching temperatures. W1 Grade are used where a simple heat treatment is more important than wear resistance or high dimensional stability during heat treating.

Note: Additional sizes and grades are available; call 1-800-GRAINGER (472-4643).

Alloy Steel Blanks & Flat Stock

After being softened in the annealed heat-treatment process, **Flat Stock** alloy steel is relatively easy to machine and responds well to heat-treatment. It has good strength, toughness, ductility, and resistance to wear and fatigue. Suitable applications include general-purpose machining, blades, brakes, dies, fixtures, tool holders, bolts, piston rods, and axles. **Blank stock** has been heat-treated for strength and hardness while maintaining reasonable toughness. This helps make it optimal for machining and precision applications of metal parts and products.

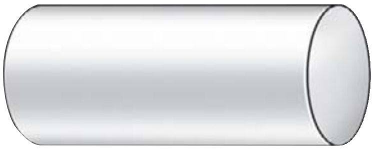
Alloy Steel Rod Stock



4140 cold-finished alloy steel is suitable when greater toughness and wear-resistance is needed for applications including, but not limited to, ejectors, tooling, cams, collars, bolts, axels, rods, and machinery parts and components. **8620 cold-finished alloy steel** is ideal for applications such as fasteners, bearings, gears, shafts and other machine parts.

Stainless Steel Information

These low-maintenance materials are often used in applications where corrosion resistance is critical. Stainless steels have a higher resistance to rust in many natural and man-made environments; however, it is important to use the appropriate grade of steel regarding strength, hardness, and workability requirements. See page 2188 for Stainless Steel Perforated Sheets.

300 SERIES—AUSTENITIC CHROMIUM-NICKEL ALLOYS

Type 302—Same corrosion resistance as 304, with slightly higher strength due to additional carbon.

Type 303—Free-machining version of 304, via addition of sulfur and phosphorus.

Type 304—The most-common grade; the classic 18/8 stainless steel. Offers excellent machining and welding characteristics. Widely accepted in dairy, beverage, and food product industries where sanitation and cleanliness are essential.

Type 316—The second most-common grade (after 304). Also known as marine-grade stainless steel, due to its increased resistance to chloride corrosion (compared to 304). It is resistant to the damaging effects of salts, reducing acids, and atmospheric and general corrosive conditions. For food and surgical stainless steel uses.

400C SERIES—FERRITIC AND MARTENISTIC CHROMIUM ALLOYS

Type 416—Easy to machine due to additional sulfur.

Type 430—Good formability, but with reduced temperature and corrosion resistance.

Type 440—A higher grade of cutlery steel, with more carbon, allowing better edge retention when properly heat treated. Can be hardened to above Rockwell 55 hardness.

600 SERIES—MARTENISTIC PRECIPITATION HARDENING ALLOYS

Type 630—Most common PH stainless; better known as 17-4 (17% chromium, 4% nickel).

Stainless Steel Comparison Chart

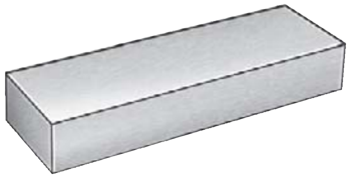
Stainless Steel—Precision Ground Blanks

Precision blanks have highly consistent dimensions with guaranteed tolerances. Machine-ready materials increase throughput to help minimize preparation and setup times. Type 304 meets ASTM A240 standard. Type 316 meet ASTM A240 and ASTM A167 standards.



Note: Additional sizes are available; call 1-800-GRAINGER (472-4643).

Stainless Steel—Wire

- Sold in 1-lb. coils
- Excellent corrosion resistance

Smooth-finish, full-hard, Type 302 wire is spring-tempered for industrial uses including wire forms, control linkages, springs, armature binding, and ceramic cutting. Comes in an easy-to-use dispenser box. Meets ASTM A555, ASTM A313, ASTM A580, and AMS 5688 standards.

Wire Cloth—304 Stainless Steel, Milling Grade

- 48 L x 48 W

Lighter wire diameters than standard (market) grade provide a greater percentage of open area in the screen cloth.

Note: Additional sizes are available; call 1-800-GRAINGER (472-4643).

Carbon Steel—Music Wire

- Sold in 1-lb. coils

Spring-tempered wire is used for control linkages, ceramic cutting, armature binding, wire forms, springs, and other industrial uses. Packaged in an easy-to-use pull-dispenser box, except 15V232 and 15V233 come in tubes. Meets ASTM A228 standard.

High-Carbon Steel—1085 carbon steel alloy provides high tensile strength and high fatigue resistance.

Spring Steel—Full-hard, smooth-finish 300 Series stainless steel provides excellent corrosion resistance.

Raised

Expanded Metal Sheets

Strong, rigid sheets allow air and light to pass through. Mesh construction is easily shaped, welded, and cut. Flat sheets provide a smooth surface. Raised sheets are used in applications that require surface traction.

Aluminum Information

Soft, lightweight, corrosion-resistant alloy conducts both heat and electricity.

ALUMINUM TEMPERS

H14 (½ Hard)
Material is strain-hardened only (without additional thermal treatment) to a half-hard temper.

H22 (¼ Hard)
Material is strain-hardened and partially annealed to a quarter-hard condition.

H32 (¼ Hard)
Material is strain-hardened and mechanical properties are stabilized with supplementary thermal treatment to a quarter-hard temper.

T52
Material resists corrosion and can be formed, machined, and welded. Aluminum rods are lightweight and suitable for braces, cross members, frames, ornamental work, railings, and supports. Rods can be drilled, machined, punched, and sawed.

T6
Material is solution heat treated and then artificially aged.

T651
Material is solution heat treated, artificially aged, and then stretch-stress relieved. Refers to plates and cold-finished bars and rods.

T6511
Extruded material is solution heat treated, artificially aged, and then stretch-stress relieved.

Material	Tensile Strength* (psi)	Yield Strength* (psi)	Hardness* (BHN)	Corrosion Resistance	Wear Resistance	Formability	Machinability	Weldability
Alloy 2011	55,000	43,000	95	Poor	Fair	Fair	Excellent	Not Recommended

STAINLESS STEEL FOIL ROLLS

Nonmagnetic rolls have good weldability and formability. Frequently used in heat treating, moisture barriers, chemical tanks, heat exchangers, fin stock, chemical equipment, metal stampings, and shim stock. Meet ASTM A240 standards.

COPPER FOIL ROLLS—ALLOY 110

Form a corrosion-resistant green patina over time. Plain finish, soft temper. Commonly used in heat exchangers, fin stock, metal stampings, transformers. Meet ASTM B152 standards.

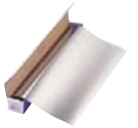
PRECISION BRAND
MAUDLIN PRODUCTS
MW Industries, Inc.



Coatings & Tool Wraps

Cut-to-fit wraps eliminate decarburization buildup, help protect from scale and oxide buildup during heat treating in atmospheric furnaces, and protect surface of air hardening tool steels. Packaged in reclosable cartons.

Note: Additional sizes are available on Grainger.com®.

Bar Grating Information

Designed to provide safe, secure footing for many applications, bar grating is a strong choice for projects ranging from trenches to decking.

STAIR TREAD

Constructed like other bar grating, with stair-specific additional reinforcement and extra safety adjustments. A nosing is attached to the leading edge for increased edge visibility and slip resistance. Nosings may be grooved or checker plate (also known as diamond plate).

DEFINITIONS

Anchors—Devices that attach grating to its supports.

Band—A flat bar welded to the end of a grating panel or along the line of a cutout. Extends neither above nor below the bearing bars. A load-carrying band transfers the load from unsupported bearing bars to supported bearing bars. A trim band carries no load; used to improve appearance.

Bearing Bar—Load-carrying bar that extends in the direction of the span.

Cross Bar—The connecting bar that intersects or curves between the bearing bars and is welded, forged, or mechanically locked to them.

Cutout—An area of grating removed to clear an obstruction or let pipes, ducts, or columns pass through.

Grating—Open grid assembly of metal bars with bearing bars running in one direction, spaced by rigid attachment to cross bars that run perpendicularly or by bent connecting bars that extend between them.

Length—The span of grating or distance between points of grating support.

Width—Measured perpendicular to the bearing bars and in the same direction as the cross bars to determine the overall dimension of a grating panel.

SURFACES

Serrated—Grips shoes tightly for high slip resistance. Offers good slip protection in areas prone to oil or other hazardous materials.

Smooth—All-purpose slip-resistant design's texture is less harsh underfoot than serrated.

MATERIALS

Aluminum—Good where a lightweight, corrosion-resistant material is desired.

Steel—Strong material is good to use if the environment is not expressly corrosive.

304 Stainless Steel—Stronger than aluminum, stainless steel provides superior corrosion and oxidation resistance.

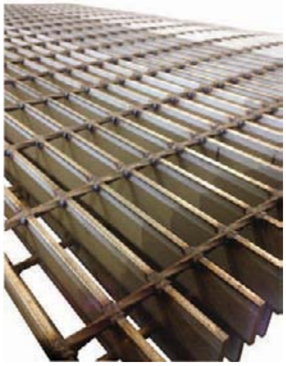
JOINING METHODS

Pressure Locked (Dovetail)—Cross bars are mechanically locked to the bearing bars at their intersections. Permanent joints give long-lasting service under normal conditions.

Riveted—Straight bearing bars and bent connecting bars are riveted together at their contact points. Reliable and durable.

Swage Locked—A cost-effective and reliable pressure locking method.

Welded—Joined at the intersection of the bearing bars and cross bars. A versatile choice for light to moderate loads. The most common way aluminum bar grating is manufactured.



Bar Grating

- Bearing bar spacing: 1.188"
- Cross bar spacing: 4"

Note: Additional sizes are available; call 1-800-GRAINGER (472-4643).

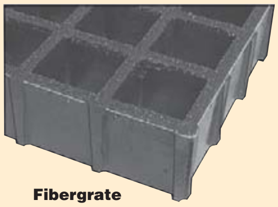
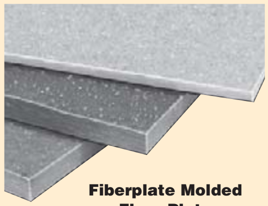
Fibertred Corvex Molded

Safe-T-Span Industrial Pultruded Grating



Fibergrate Molded Grating



Fiberplate Molded Floor Plate

Fiberglass Information

MOLDED GRATING

- **No more than ¼" deflection for recommended loads**

Provide reliable corrosion-, impact-, and slip-resistant surfaces.

Corvex—Premium polyester grating.

FGI-AM Antimicrobial Premium Polyester—Food-grade formulation inhibits bacteria, fungus, and mildew growth. USDA accepted.

Micro-Mesh Corvex—Lightweight sheets for use where underfloor access and unobstructed airflow is required.

Vi-Corr High Load Capacity—Engineered to carry forklift loads.

PULTRUDED GRATING

Safe-T-Span Pedestrian and Industrial—Manufactured from a fire-retardant isophthalic polyester resin system (ISOFR).

MOLTRUDED GRATING

Combines corrosion resistance of molded grating with longer span capacity of pultruded grating.

Rigidex—Large openings allow greater airflow for walkways and platforms.

Aqua Grate—Withstands corrosion and helps provide safety and comfort for walking with bare feet in high-traffic, public recreational areas. Meets ADA guidelines.

FIBERPLATE

Solid composite panels offer bidirectional strength.

DEFINITIONS

Ultimate Capacity—Represents the weight which, if exceeded, will result in a complete and total failure of the grating.

ISOFR—Isophthalic Polyester Fire Retardant Resin formulation has a flame spread rating of 25 or less. Designed for applications where moderate exposure to corrosive elements exists.

VEFR—Vinyl Ester Fire Retardant Resin. For severe exposure to corrosive elements.

Applied Grit Top—Quartz grit applied to surface for slip-resistant footing.

Meniscus Top—Concave surface provides highly slip-resistant footing in most environments, including in wet or oily conditions.

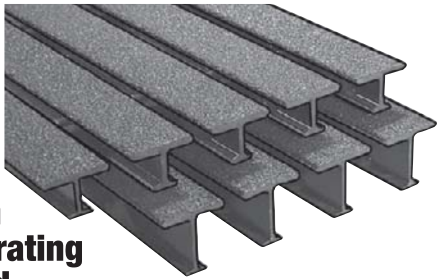
I-Shaped



T-Shaped

Fibergrate Composite Structures

Safe-T-Span Pultruded Grating & Stair Tread

- Grit top

Nonconductive, lightweight grating is manufactured from a fire-retardant isophthalic polyester resin system (ISOFR). Corrosion- and slip-resistant material replaces steel bar grating. A high percentage of glass provides durability and high unidirectional strength and stiffness, making this the ideal solution for applications where longer support spans are required. Supports loads in the span direction only.

Fibergrate Composite Structures

Aqua Grate

- Light gray

Lightweight, pultruded pedestrian grating withstands corrosion. Helps provide safety and comfort for walking with bare feet in high-traffic, public recreational areas. Fine grit surface provides a high level of slip resistance. Protection against long-term UV exposure is provided by a synthetic surfacing veil and UV inhibitors in the resin formulation. Features nominal ¼" space between the 1½" wide bearing bars.

Cylindrical Rod

Fibergrate Composite Structures

Dynaform Structural Shapes

- Temp. range: -100° to 150°F
- Tensile strength: 30,000 psi; except cylindrical rods are 100,000 psi

Resin material is ideal for platforms, walkways, and equipment support. Isophthalic polyester resin formulation (ISOFR) provides a low flame-spread rating of 25 or less (when tested according to ASTM E-84). Cylindrical rods are made of olive green ispophthalic polyester (ISO) resin which resists a wide array of chemicals and highly acidic conditions. Not fire retardant.

Silicone Foam Tubes

- 5 Ft. length
- Red
- Tensile Strength 200 (PSI)

Silicone foam tube is commonly used to create seals and washers for high-heat and outdoor applications. It withstands high temperatures and has excellent resistance to UV rays.

Details on page A1.

General Purpose Grade Rubber Comparison Chart

Additional grades of rubber material are available on Grainger.com.

TENSILE STRENGTH

Determined by calculating the maximum pulling force a rubber material can withstand without breaking. The higher the numerical value, the stronger the material.

ELONGATION

Measured by applying tensile force (stretching the material until it breaks), then determining the change in length from the original length. This value is expressed as a percentage of the original length.

COMPRESSION SET

Measures the ability of the rubber to return to its original thickness after prolonged compressive stresses at a given temperature and deflection. As a rubber material is compressed over time it loses its ability to return to its original thickness.

GRADE

Refers to the unique mechanical and physical properties of a specific rubber material.
High Strength rubber is stronger and more durable than standard rubber for demanding environments and applications.
Fabric Reinforced can withstand high stress and frequent flexing.
Food Grade is FDA-compliant for food, beverage, and pharmaceutical applications.

BACKING TYPE

Plain indicates the rubber does not have an adhesive.
Acrylic Adhesive provides reasonable temperature resistance with adhesion to a wide range of substrates. This adhesive ages well, has a lower tack so it sticks less when dry, and provides UV resistance.

DUROMETER

Measures the elasticity of a material: a lower durometer rating indicates a flexible and soft rubber, while a higher durometer rating indicates a harder rubber. Softer rubbers are measured on the A scale, whereas harder rubbers are measured on the D scale.

Material	Chemical Resist.	Oil Resist.	Abrasion Resist.	Weather Resist.	Tensile Strength	Elongation	Compression Set	Min. Temp. to Max. Temp.
Aflas	Excellent	Excellent	Good	Excellent	1,650 psi	—	—	0 to 450
Buna-N	Fair	Excellent	Good	Fair	1,000 psi	350 %	33 %	-30 to 250
Butyl	Excellent	Poor	Fair	Good	1,200 psi	300 %	50 %	-40 to 250
EPDM	Good	Poor	Good	Excellent	1,000 psi	350 %	33 %	-30 to 250
Fluorosilicone	Excellent	Good	Poor	Excellent	800 psi	250 %	8.97 %	-100 to 400
Hypalon	Good	Good	Fair	Good	1,500 psi	350 %	40 %	-40 to 250
Natural Rubber	Fair	Poor	Excellent	Fair	3,000 psi	750 %	25 %	-45 to 200
Neoprene	Fair	Good	Good	Excellent	1,000 psi	350 %	33 %	-30 to 250
Polyurethane	Fair	Fair	Good	Fair	3,000 psi	690 %	10 %	-45 to 250
Recycled Rubber	Poor	Poor	Good	Poor	250 psi	100 %	99 %	0 to 210
SBR	Fair	Poor	Excellent	Fair	400 psi	200 %	38 %	-45 to 200
Silicone	Good	Fair	Poor	Excellent	850 psi	300 %	35 %	-80 to 400
Vinyl	Good	Good	Fair	Good	1,000 psi	350 %	Not Rated	-40 to 180
Viton	Excellent	Excellent	Good	Excellent	1,000 psi	150 %	25 %	-10 to 400

Rubber Strips

Can be formed into custom gaskets and ideal for use in sealing and cushioning. Strips have a width of 6" or less.

Polyurethane Rubber Tubes

These abrasion-resistant tubes are polyurethane construction and offer the shock-absorbing characteristics of rubber with the durability and tear resistance of plastic.

Rubber Rods

Thicker and shorter than rubber cords and constructed of abrasion-resistant polyurethane. Rods are typically used for sealing, cushioning, or are fabricated into rubber parts.

Rubber Cord Stock

Commonly used for custom seals and the rubber is often vulcanized for improved elasticity, tensile strength, and hardness. Material is sometimes referred to as O-ring cord stock.

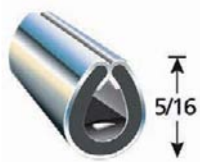
Rubber Balls

Used as seals in pumps and check valves, and are commonly used inside of vibrating sifters to help clean screens in food, beverage, and pharmaceutical applications.

Single Gripping

Dual-Gripping



Edge Guard

Edge Trim and Edge Guard

TRIM-LOK.com

Gripping Finger Trim— Flexible vinyl edge trim has a metal core and 1 or 2 gripping fingers to hold trim in place.
- Textured black

Edge Guard—Preglued, flexible black plastic trim with decorative finish. Great for vending machines, running boards, fender flares, car door edges and furniture.
- Temp. range: -20° to 150°F
- Hardness: 97
- Durometer: Shore A

Cord Stock and Foam Rubber Seals

- Temp. range: -20° to 150°F
- Black

Cord Stock—Water- and weather-resistant EPDM closed-cell sponge rubber seals are softer than rubber bulbs. Create an easy-to-close seal against dust, noise, and vibration. Solid round cord. Cut to length with scissors or knife.

Foam Rubber Seals—Water-resistant EPDM closed-cell sponge rubber seals are weather resistant. Create an easy-to-close seal against dust, noise, and vibration. Cut to length with scissors or knife. High-strength foam acrylic adhesive creates an airtight seal between the rubber and substrate and has low initial tack for easy repositioning. General-purpose pressure sensitive adhesive is ideal for light-duty applications.

Plastic Information

Material, Grade	Tensile Strength	Tensile Strength Rating	Impact Strength	Impact Strength Rating	Plastic Hardness	Plastic Hardness Rating	Friction Coefficient	Friction Rating	Water Absorption Rating	Machinability	Wear Factor	Corrosion and Chemical Resistance	Plastic Density	Temp. Range °F
ABS, Standard	7,200 psi	Good	4.6 ft-lb/in	Good	Rockwell R105	Hard	0.5	Slippery	Poor	Good	Fair	Fair	0.038 lb/cu in	-40 to 190
Acetal Copolymer, Standard	9,100 psi	Good	1.1 ft-lb/in	Poor	Rockwell M90	Hard	0.35	Slippery	Good	Excellent	Excellent	Fair	0.051 lb/cu in	-50 to 180
Acetal Homopolymer, Standard	9,600 psi	Good	1.2 ft-lbs/in	Poor	Rockwell M94	Hard	0.2	Very Slippery	Good	Excellent	Excellent	Fair	0.051 lb/cu in	-20 to 180
Acetal Homopolymer, PTFE-Filled	7,690 psi	Good	0.7 ft-lb/in	Poor	Rockwell M89	Hard	0.12	Very Slippery	Good	Excellent	Excellent	Fair	0.0526 lb/cu in	-40 to 185
Acetal Copolymer, Standard	9,100 psi	Good	1.1 ft-lb/in	Poor	Rockwell M90	Hard	0.35	Slippery	Good	Excellent	Excellent	Fair	0.051 lb/cu in	-50 to 180
Cast Acrylic, Standard	9,000 psi	Good	0.3 ft-lb/in	Poor	Rockwell M95	Hard	0.8	Not Slippery	Poor	Good	Fair	Fair	0.043 lb/cu in	40 to 190
Cast Nylon, Standard	12,000 psi	Excellent	0.4 ft-lb/in	Poor	Rockwell M85	Hard	0.2	Very Slippery	Poor	Good	Excellent	Fair	—	32 to 200
Cast Nylon, Enhanced Temperature	12,000 psi	Excellent	0.4 ft-lb/in	Poor	85D	Hard	0.2	Very Slippery	Poor	Good	Excellent	Fair	—	32 to 260
Cast Nylon, MDS-Filled	11,000 psi	Excellent	0.5 ft-lb/in	Poor	Rockwell M80	Hard	0.2	Very Slippery	Poor	Good	Excellent	Fair	—	32 to 200
Cast Nylon, Oil-Filled	9,900 psi	Good	1.0 ft-lb/in	Poor	Rockwell M85	Hard	0.14	Very Slippery	Poor	Good	Excellent	Fair	—	32 to 220
CPVC, Standard	7,500 psi	Good	1.2 ft-lbs/in	Poor	Rockwell R115	Hard	0.6	Not Slippery	Excellent	Fair	Fair	Excellent	0.056 lb/cu in	30 to 200
Garolite CE, Standard	10,000 psi	Good	1.7 ft-lb/in	Poor	Rockwell M100	Hard	—	Not Rated	Poor	Good	Fair	Fair	0.049 lb/cu in	0 to 250
Garolite G-10, Standard	40,000 psi	Excellent	14.0 ft-lb/in	Excellent	Rockwell M110	Extra Hard	—	Not Rated	Good	Good	Fair	Good	0.065 lb/cu in	0 to 270
Garolite G-10/ FR4, Standard	38,000 psi	Excellent	14.0 ft-lb/in	Excellent	Rockwell M110	Extra Hard	—	Not Rated	Good	Good	Fair	Good	0.072 lb/cu in	-70 to 280
Garolite G-11, Standard	37,000 psi	Excellent	12.0 ft-lb/in	Excellent	Rockwell M110	Extra Hard	—	Not Rated	Poor	Fair	Fair	Good	0.066 lb/cu in	0 to 300
Garolite XX, Standard	15,000 psi	Excellent	0.6 ft-lb/in	Poor	Rockwell M110	Extra Hard	—	Not Rated	Poor	Good	Fair	Fair	0.049 lb/cu in	0 to 250
Garolite LE, Standard	13,000 psi	Excellent	1.3 ft-lb/in	Poor	Rockwell M100	Hard	—	Not Rated	Poor	Excellent	Fair	Fair	0.048 lb/cu in	0 to 250
HDPE, Standard	4,500 psi	Poor	2.75 ft-lb/in	Good	65D	Medium	—	Very Slippery	Excellent	Fair	Good	Good	—	-58 to 170
HDPE, Marine	4,000 psi	Poor	1.1 ft-lb/in	Poor	64D	Medium	0.31	Slippery	Excellent	Fair	Good	Good	0.034 lb/cu in	-100 to 180
LDPE, Standard	850 psi	Poor	Excellent	Excellent	40D	Medium Soft	—	Slippery	Good	Good	Good	Good	0.033 lb/cu in	-60 to 150
Nylon 6/6, Standard	13,000 psi	Excellent	0.6 ft-lb/in	Poor	Rockwell M85	Hard	0.25	Very Slippery	Poor	Good	Excellent	Fair	0.041 lb/cu in	-20 to 210
Nylon 6/6, Glass-Filled	13,000 psi	Excellent	0.6 ft-lb/in	Poor	Rockwell M88	Hard	0.16	Very Slippery	Poor	Good	Excellent	Fair	0.042 lb/cu in	-40 to 230
Nylon 6/12, Standard	11,000 psi	Excellent	0.3 ft-lb/in	Poor	Rockwell R115	Hard	0.4	Slippery	Poor	Good	Excellent	Fair	0.042 lb/cu in	-20 to 200
Extruded Nylon 6/6, MDS-Filled	12,500 psi	Excellent	0.5 ft-lb/in	Poor	Rockwell M85	Hard	0.2	Very Slippery	Poor	Good	Excellent	Fair	—	-40 to 220
Nylon 6, Enhanced Temperature	12,000 psi	Excellent	0.4 ft-lb/in	Poor	85D	Hard	0.2	Very Slippery	Poor	Good	Excellent	Fair	—	32 to 260
Nylon 6, Lubricant-Filled	11,000 psi	Excellent	0.5 ft-lb/in	Poor	85D	Hard	0.18	Very Slippery	Poor	Good	Excellent	Fair	—	32 to 200
Nylon 6, MDS-Filled	11,000 psi	Excellent	0.5 ft-lb/in	Poor	Rockwell M80	Hard	0.2	Very Slippery	Poor	Good	Excellent	Fair	—	32 to 200
Nylon 6, Oil-Filled	9,900 psi	Good	1.0 ft-lb/in	Poor	Rockwell M85	Hard	0.14	Very Slippery	Poor	Good	Excellent	Fair	—	32 to 220
PAI, Standard	15,000 psi	Excellent	0.8 ft-lb/in	Poor	Rockwell M106	Extra Hard	0.2	Very Slippery	Poor	Fair	Excellent	Excellent	—	-321 to 500
PAI, Electrically Insulating	20,000 psi	Excellent	2.0 ft-lb/in	Good	Rockwell M120	Extra Hard	0.35	Slippery	Poor	Fair	Excellent	Excellent	—	-321 to 500
PEEK, Standard	16,000 psi	Excellent	0.6 ft-lb/in	Poor	Rockwell M100	Hard	0.32	Slippery	Good	Fair	Excellent	Excellent	—	-20 to 480
PEI, Standard	17,000 psi	Excellent	0.5 ft-lb/in	Poor	Rockwell M112	Extra Hard	0.42	Slippery	Good	Fair	Fair	Good	—	-20 to 340
PETG, Standard	7,700 psi	Good	1.7 ft-lb/in	Poor	Rockwell R115	Hard	—	Slippery	Good	Good	Fair	Good	—	-40 to 153
Polycarbonate, Standard	9,700 psi	Good	14.0 ft-lb/in	Excellent	Rockwell R120	Hard	0.53	Not Slippery	Good	Fair	Fair	Fair	0.043 lb/cu in	-40 to 240
Polyester, Standard	12,400 psi	Excellent	0.5 ft-lb/in	Poor	—	Hard	0.2	Very Slippery	Good	Good	Fair	Fair	—	-30 to 210
Polyester, Lubricant-Filled	10,500 psi	Excellent	0.4 ft-lb/in	Poor	Rockwell M96	Hard	0.19	Very Slippery	Good	Good	Fair	Fair	—	32 to 210
Polyimide, Standard	16,000 psi	Excellent	Not Rated	Poor	Not Rated	Not Rated	—	Slippery	Poor	Fair	Excellent	Excellent	0.051 lb/cu in	-450 to 750
Polypropylene, Standard	4,200 psi	Poor	1.2 ft-lb/in	Poor	Rockwell M85	Hard	0.5	Slippery	Excellent	Fair	Fair	Good	0.033 lb/cu in	0 to 180
Polystyrene, Standard	2,500 psi	Poor	0.2 ft-lb/in	Poor	Rockwell R70	Hard	0.5	Slippery	Poor	Fair	Fair	Fair	0.038 lb/cu in	0 to 150
PPS, Standard	10,900 psi	Excellent	1.4 ft-lb/in	Poor	Rockwell M84	Hard	0.2	Very Slippery	Excellent	Good	Fair	Good	—	32 to 430
PTFE, Standard	2,900 psi	Poor	—	—	55D	Medium Soft	0.08	Very Slippery	Excellent	Excellent	Excellent	Excellent	0.08 lb/cu in	-300 to 500
PTFE, Glass-Filled	1,000 psi	Poor	Not Rated	Good	55D	Medium Soft	0.12	Very Slippery	Excellent	Excellent	Excellent	Excellent	0.08 lb/cu in	-350 to 500
PVC Type 1, Standard	7,200 psi	Good	1.0 ft-lb/in	Poor	Rockwell R115	Hard	0.6	Not Slippery	Good	Fair	Fair	Excellent	0.051 lb/cu in	-20 to 140
PVC Type 2, Standard	7,250 psi	Good	1.0 ft-lbs/in	Poor	Rockwell R110	Hard	0.6	Not Slippery	Good	Fair	Fair	Excellent	0.051 lb/cu in	-20 to 140
Acrylic/PVC, Standard	6,100 psi	Good	—	—	—	Hard	—	Slippery	Good	Fair	Fair	Excellent	—	—
UHMW Polyethylene, Standard	5,800 psi	Good	Excellent	Excellent	66D	Medium	0.12	Very Slippery	Excellent	Good	Excellent	Good	—	-22 to 180
UHMW Polyethylene, Enhanced Temperature	6,800 psi	Good	Excellent	Excellent	68D	Medium	0.12	Very Slippery	Excellent	Good	Excellent	Good	—	-22 to 275

Felt Information

WOOL FELT

Naturally flame-resistant, Type 1 wool felts will still burn when exposed to an open flame, although they will self-extinguish once the flame is removed. Material is naturally abrasion- and vibration-resistant.

SYNTHETIC POLYESTER FELT

Economical synthetic felt. Ideal as a replacement for wool; however, polyester has lower sound-deadening, compression recovery, and wicking properties than wool.

FELT COMPARISON CHART

Material	Wool Fiber Content (%)	Durometer	Hardness	Tensile Strength (psi)	Resistance (psi)	Compression Recovery (%)	Max. Temp (°F)	Abrasion Resistance	Vibration Absorption	Acid Resistance	Alkalai Resistance (Dilute)	Solvent Resistance	Color
Wool Felt													
Grade F1	95	30 to 40A	Extra-Firm	500	33	99	200	Excellent	High	Good	Fair	Excellent	Off-White
Grade F3	85	30 to 40A	Firm	400	22	99	200	Excellent	High	Good	Fair	Excellent	Gray
Grade F5	95	20 to 30A	Medium	400	18	99	200	Good	Medium	Good	Fair	Excellent	Off-White
Grade F7	80	20 to 30A	Medium	250	12	99	200	Good	Medium	Good	Fair	Excellent	Gray

MJ May MATERIAL SPECIALISTS INC.

Burlap Fabric

Woven from natural jute fibers, this coarse fabric is 100% biodegradable and recyclable. Burlap has exceptional tensile strength and tear resistance. Large weave pattern results in exceptional breathability. Used in multiple industries including textile, construction, agriculture, and packaging.

Spray Adhesives

3M

Heavy-Duty 20 and Multipurpose 27—Fast-tack sprays cover a wide variety of substrates.

Pressure Sensitive 72—Industrial-grade formula is permanently tacky and repositionable. Can be used as pipe insulation lap adhesive.

Foam Fast 74—Features high coverage, soft bond lines, and immediate bonds.

Hi-Tack 76—High tack for 1-surface bonding.

Super 77 Multipurpose—High-tack, fast-drying spray bonds quickly. Low soak-in for long-lasting bond.

Insulation 78—Foam adhesive bonds polystyrene with no surface degradation.

Rubber and Vinyl 80—Neoprene-based adhesive is plasticizer-resistant.

Hi-Strength 90—Creates a high-strength bond with excellent moisture resistance. Features variable-width lace spray pattern.

Shipping Mate Case Sealing—Reseals cartons which come unglued or have to be opened and resealed. Holding strength in 10 sec. with carton-tearing strength in 5 min. Nonmisting, precise spray control.

Dry Layup Adhesive—This sprayable, synthetic elastomer-based adhesive is designed to reduce the amount of time required for dry layup of fiberglass.

Adhesive Remover, Citrus-Based—Leaves no residue and can replace mineral spirits, acetone, and other organic solvents for general cleaning.

CRC

Spray Adhesive—General-purpose, quick tack adhesive is ideal for labeling boxes and machinery, sealing packages for shipment, hanging insulation, repairing furniture, and displaying materials.

LOCTITE

Maximum Strength Headliner—Water-resistant aerosol formula is effective in contact with automotive fluids except gasoline. Sprays on clear. Air dries in 5 min.

SPRAYON

General Purpose and SP900 Heavy-Duty—Provide bonding for woodworking, installing insulation, and product line work. Dry quickly. General Purpose is foam-safe; delivered in a controlled mist spray pattern. SP900 Heavy-Duty forms permanent bonds; controlled lace spray pattern. VOC and MIR compliant.

GORILLA

Heavy-duty, multipurpose, and easy-to-use adhesive forms a clear, permanent bond that is moisture resistant, photo safe, and can be used on projects both indoors and out. Wide pad nozzle and controlled, fine mist spray allow even application.

Epoxy Adhesives

Use epoxy on a wide range of formulations to join construction elements together and form a strong bond. These adhesives protect underlying surfaces from dirt and moisture.They are widely used due to their resistance to chemicals and environments, their high strength, and their ability to resist deformation under sustained load.

3M Scotch-Weld—All DP series adhere to metal and plastic. DP110 also bonds to rubber. DP420 also adheres to ceramic, glass, and wood. DP460 is also for use with ceramic and wood.

Devcon—All bond to metal, glass, ceramic, concrete, and wood.

Gorilla Glue—For use on ceramic, metal, and wood.

Loctite—All Hysol Series are for use on metal and plastic. E-00CL, E-00NS, E-20HP, E-30CL, and E-90FL can also bond to ceramics and glass. E-60NC are for use with electronics. Fixmaster Fast Cure Epoxy bonds to metal, ceramic, concrete, wood, glass, and plastic. 4KL23 and 3KE55 include 10 premeasured cups each.

J-B Weld—All bond to metal and plastic. Weld and Professional Series also adhere to wood. Kwik Weld also bonds to fiberglass. Use Marine Weld for ceramic, fiberglass, glass, masonry, and wood.

Super Glue—Quick Setting Metal is for use on aluminum, copper, stainless steel, brass, iron, and steel. Plastic Fusion is for use on plastic, rubber, metal, concrete, and porcelain. All other epoxies are used for glass, metal, wood, rubber, and plastic.

Vibra-Tite—All adhere to ceramic, metal, and wood.

Depend 330
4KL14

Devcon LOCTITE 3M

Acrylic Structural Adhesives

These durable acrylic adhesives combine the benefits of fast process speeds with tough, durable, and environmentally resistant bond strengths. They perform well against the elements because they are waterproof and stand up to UV exposure. Feature a higher tolerance for unprepared surfaces.

DEVCON

Plastic Welder—Bonds most plastics, bare metals, and dissimilar substrates.

LOCTITE

Loctite 324/325/326—Bond to alnico, ferrite, and neodymium metals.

Depend 330—Bond to ceramic metal, plastic, and wood.

3M

Bonds to low surface energy plastics (LSE), thermoplastics, composites, and metals.

Plastic Adhesives

Plastic adhesives are resistant to weathering, oil, water, and plasticizer migration. They create a permanent bond. Fiberglass-reinforced polyester is ideal for long-lasting repairs.

1099 Scotch-Weld—Bonds vinyl extrusions and sheeting, fabrics, foams, and many plastics.

4475 Industrial Plastic Adhesive—Bonds many ceramics, glass, leather, cloth, and vinyls.

PR100—Precision nozzle. Recommended for gasket attachment, small joint assembly, jewelry assembly, Orthopedics and footwear.

LOCTITE

Urethane Adhesives

- 1.69-oz. cartridge
- Temp. range: -65° to 250°F

Urethane or polyurethane adhesives exhibit superior moisture and humidity resistance, as well as good toughness and flexibility. They bond a wide variety of materials, including most metals plastics, and composites.

Hysol U-05FL—Bonds a variety of metals, as well as plastics, glass, wood, and more. Can also be used for potting and encapsulating strain and heat sensitive electronic components.

Hysol U-09FL—Ideal for bonding polycarbonate and other plastics, glass, and metal. Suited for applications requiring a clear, nonyellowing bond line.

Hysol U-09LV—Bonds polycarbonate and other plastics, glass, and metal. Suited for applications requiring a clear, nonyellowing bond line.

Epoxy, Urethane, and Silicone Adhesive Packets

- 1:1 mixing ratio
- Full cure: 24 hr.
- Pkg. of 10 (3.5g) packets

EPOXY ADHESIVES
Chemical- and water-resistant once cured.

SILICONE ADHESIVES
Flexible once cured to form a bond that resists moisture, vibration, ozone, and temperature extremes.

URETHANE ADHESIVES
Fast-setting adhesives have excellent tear, abrasion, wear, and scratch resistance.

LOCTITE

EA 3463 Metal Magic Steel—Seals pipes, gas tanks, water tanks, and vessels. Epoxy stick can be kneaded.

EA 3471 Steel Putty—Steel-filled, nonsagging epoxy bonds to stainless steel, concrete, cast-iron, and other metals.

EA 3472 Steel Liquid—Steel-filled, pourable epoxy bonds to steel, cast-iron, stainless steel, and concrete.

EA 3473 Fast-Set Steel Putty—Trowelable putty sets quickly and is machinable when cured.

EA 3476 Stainless Steel Putty—Trowelable putty matches the thermal expansion coefficient of stainless steel.

EA 3478 Superior Metal—Renews and protects surfaces from corrosion and abrasion in harsh environments. Use on fuel and gas tanks, pipes, and elbows.

PC 7254 Aluminum Putty—Trowelable epoxy can be machined when cured.

Fixmaster 2000°F Putty—Trowelable, machinable putty fills and restores damaged and cracked metal.

J-B WELD

SteelStik—Hand-kneadable and steel-reinforced putty. Requires no tools or prep time. Makes permanent repairs on wet and dry surfaces.

Waterweld—Hand-kneadable. Cures under water. For metal, plastics, and composites. Safe for use with PVC plumbing and potable water contact.

KwikWood Epoxy Putty—Repairs and rebuilds damaged, missing, and rotted wood quickly.

Wood Restore Repair Putty—Easy-to-sand putty fills cracks and voids in wood and can be painted in 1 hr. Use indoors or out.

PC PRODUCTS

PC-Plumbing—For sealing plumbing components with potable water contact. Cures wet or dry. Waterproof after cured. Use on PVC, ABS, stainless steel, copper, galvanized, black pipes, and tubing.

HERCULES

Mixes quickly and easily to form a permanent bond in 20 min. Adheres to almost all surfaces including metals, masonry, wood, glass, ceramic, and some plastics.

LOCTITE®

Belt/Rubber Repair and Etching/Cleaning Solutions

- Up to 180°F

URETHANE BELT REPAIR

Abrasion-, corrosion-, and impact-resistant products repair conveyor belts and damaged rubber equipment. Nonshrinking and completely unaffected by oil, grease, and water.

MR Flex 80 Putty Pourable Repair Compound—Rebuilds and repairs rubber parts and lines in pumps. Trowelable, 2-part putty bonds to metal, concrete, rubber, and some plastics.

MR Flex 80 Liquid Repair Compound—Castable, 2-part urethane makes molds, fixtures, and expansion joints. Use for nonscratching holding fixtures.

Fixmaster Rapid Rubber Repair Urethane—Premium-quality belt repair for damaged rubber equipment. Quickly and easily repairs with the same durability and flexibility as the belt.

ETCHING AND CLEANING SOLUTIONS

For use with Rapid Rubber Repair 2WKR2.

SF FM Etching Agent Activator etches surfaces for better bonding of urethanes.

SF 8220 Flex Cleaner is a colorless liquid designed to thoroughly clean rubber, urethane, or metal surfaces before cleaning. Nontoxic formula dries quickly and leaves no residue. One-component liquid cures at room temperature and requires no mixing.

Threadlocker Guide

Threadlockers significantly increase the reliability of threaded fasteners. Liquid fills gaps between threads to help form solid, unitized assemblies. They help prevent fasteners from loosening due to vibration and protect against rust and corrosion. Depending on the formula, threadlockers can be primerless and oil tolerant.

Color	Strength Level	Disassembly	Removable With	Full Cure Time	Optium Temp. Ranges	For Fastener Diameter
Purple	Low	Removable	Hand Tools	24 Hour	-65° to 300°F	Up to ¼" (6mm)
Green	Medium	Removable	Hand Tools	24 Hour	-65° to 300°F	Up to ½" (12mm)
Blue	Medium	Removable	Hand Tools	24 Hour	-65° to 300°F	¼" to ¾" (6mm to 22mm)
Red	High	Permanent*	Heat and Hand Tools	24 Hour	-65° to 550°F	Up to ½" (36mm)
Black	High	Permanent*	Heat and Hand Tools	24 Hour	-65° to 300°F	Larger than ⅞"

*No threadlocker is permanent. High strength can be removed using standard hand tools following direct exposure to temperatures of 450°F.

Threadlockers

Primerless Threadlockers—Allow you to apply threadlocking material without using priming activators.

Threadlockers—Help prevent damage to fasteners by sealing air gaps to stop fasteners from loosening. Primers are often suggested when using threadlockers to help increase adhesion to fasteners. For a selection of primers, see page 2223.

Wicking-Grade Threadlockers—Ideal for threaded assemblies, these low viscosity threadlockers flow or wick themselves onto threads. Meet MIL-S-46163A for existing designs. 49CF71 also meets ASTM D 5363 for new design.

HIGH LUBRICITY

High-strength formula with increased lubricity reduces friction and achieves proper clamp load, even when exposed to vibration. Use for permanent applications on large metal fasteners over ⅞" dia.

PLASTIC FASTENER

Low-strength and fast-curing threadlocker can be used as a tamperproofing agent for screw heads.

STICK

Semisolid stick formula won't spill or leak.

TAPE

Offers convenience with no mess. Works with 3 wraps on threaded bolts every time.

LOCTITE

Retaining Compounds

Retaining compounds fill the space between parts to hold them in place with a high-strength bond. They harden in the absence of air (called anaerobic adhesives). Full cure in 24 hr.

Low-Viscosity—Bond rigid metal assemblies. Fixture in 10 min. Agency approvals: CFIA, MIL-R-46082B for existing designs, ASTMD-5363 for new designs.

High-Temperature—High-viscosity for repairing valve sleeves, retaining valve seats, and affixing cylindrical liners. Fixture in 30 min. CFIA listed.

Note: Require a secondary heat cure at 356°F (180°C) to generate high-temp. resistance.

High-Strength—Room temp.-curing adhesives are for pulleys, cams, flywheels, and rotor-to-shaft bonds. Fixture in 10 min. NSF/ANSI-61 certified, ABS approved, and CFIA listed.

Specialty—Nonrun paste fills metal surface imperfections and repairs worn areas to keep machinery running. Repairs worn shafts, splines, keyways, and housings. Fixtures in 20 min. CFIA listed.

Primers, Activators, and Accelerators

Anaerobic adhesives cure in the absence of air and in the presence of metal ions. When assembling inactive metal parts, which are low in metal ions, primers are recommended to ensure proper adhesion. Use with anaerobic threadlockers, retaining compounds, pipe sealants, and gasketing materials.

Primer Is Recommended for Inactive Metals	Primer Is Optional for Active Metals
Aluminum - Anodized (Alodine, Irridite) and Pure, Black Oxide - Natural or Chemical, Cadmium, Gold, Iconel, Magnesium, Plated Parts, Silver, Stainless Steel, Steel - Galvanized and Magnetite, Titanium, and Zinc	Brass, Bronze, Copper, Iron, Kovar, Manganese, Monel, Nickel, and Plain Steel

Pipe Thread Sealants and Repair Kits

THREAD SEALANT
Anaerobic thread sealants are applied to a metal fastener and installed into a metal assembly. In the absence of air and the presence of active metals, the anaerobic compound will cure into a thermoset plastic, thus locking and sealing the fastener in place.

REFRIGERANT PIPE SEALANT
Refrigerant Pipe Sealant has excellent solvent resistance on threaded fittings and pipes up to 3" dia. It has good chemical resistance and is recommended for refrigeration systems and service with aggressive chemicals.

PIPE THREAD SEALANT
Seal threaded pipe fittings propery and block the leak path along the threads. Help make sure pipe joints are pressure-tight and waterproof.

PIPE THREAD REPAIR KITS
Make permanent repairs to stripped, threaded assemblies in 5 min. Allow up to 1538 in.-lb. torque on a 1" bolt. Resist most shop fluids.

PIPE JOINT COMPOUND
Pliable compound seals oily fittings and resists loosening by thermal expansion. Use on water, steam, oil, and fuel lines.

Instant Adhesives

- "Multipurpose" items fill gaps up to 0.004"
- "Toughened" items provide increased impact and shear strength
- "Gap-Filling" set slowly, allowing adjustment and filling up to 0.008"
- "Close-Fitting Parts" are solvent-free with high tensile and shear strengths for tight tolerance
- "Porous Surfaces" bond a wide range of uneven and absorbent substrates

Instant adhesives provide very strong bonds and start curing almost immediately.

Anaerobic-, Poly-, Silicone-, and Solvent-Based Sealants

Anaerobic-Based Flange—Rigid gasketing material remains liquid when exposed to air, but cures to a solid bond when confined between 2 mating flanges. For rigid flanges.

Polyurethane-Based—Sealant won't harden or set, even at very high temperatures.

Silicone-Based—Highly flexible adhesive offers excellent weatherability, fluid and temperature resistance to meet key industry specifications.

Solvent-Based—Generally used as a gasket dressing to fill voids between a cut gasket and the parts being sealed.

Gasket Sealants

Sealants indicated as Low-VOC are low-solvent formulations that release significantly fewer harmful vapors than standard adhesives. 1TDX3 is an odorless, solvent-free adhesive for rigid or flexible flanges. Solvent-based, paste-like sealant 2EMY3 sets slowly to a pliable film and is best suited for nonrigid, vibrating assemblies. Resistant to gasoline and other solvents. General purpose Superflex RTV Silicone Sealants 3KMY7, 3KNK3, and 3KMY8 cure at room temperature to form a tough rubber seal. Will not slump in overhead or vertical applications. Withstand extreme temperature cycling, UV light, and ozone. Cannot be painted.

Gasket/Paint Remover

Solvent-based cleaner 5YK56 removes baked-on fiber gaskets, gasket adhesives, and sealants. Excellent on paint and varnish. Contains no methylene chloride. Blistered paint can be scraped off or flushed away with water, Use on brick, tile, steel, brass, chrome, porcelain, and other surfaces.

Contact Construction Adhesives

CONTACT CEMENTS

A. Weldwood Nonflammable—High solids polychloroprene-based, waterborne contact adhesive.

B. Weldwood Original—A neoprene rubber that forms a permanent bond. For use with all laminate products. Adheres to wood, masonry, and most metals with no clamping required. High heat resistance.

C. Weldwood Bottled—Strong cement bonds on contact.

D. Weldwood Gel—Easy-to-use gel does not drip. No-mess formula is ideal for vertical and overhead surfaces. Easy spread for excellent coverage.

E. DAP Landau Top & Trim High Heat-Resistant—Automotive interior cement adheres headliners, fabric, and other materials during refurbishment. Apply with hot or cold spray equipment.

F. Acrylic Contact Cement—Solvent-based single-component adhesive remains flexible after cure. Dries clear to light yellow in 30 min. Full cure in 24 hr. Use on tile, rubber, wood, metal, laminates, and most plastics.

G. 3M Neoprene Contact Adhesive 10—Air-drying neoprene adhesive bonds immediately and permanently upon contact pressure without clamping or texturizing.

H. 3M Neoprene High-Performance Contact Adhesive 1357—Neoprene-based brush- or spray-coat adhesive bonds metal, wood, rubber (except EPDM), urethane foam, acrylic, and ABS. Meet Fed. Spec. MMM-A-121. 5E127 and 5E130 also meet MIL-A-21366A.

I. Pliobond 25/35 Nitrile Special Purpose Adhesive—All-purpose thermosetting contact adhesives have pigment-reinforced synthetic rubber and synthetic plastic resin solids; provide a permanent bond that won't get brittle with age.

J. 3M Fastbond Contact Adhesive 30-NF—High water-dispersed sprayable contact adhesive for high immediate bond strength and long bonding range. Green adhesive dries to green. Neutral dries to clear. Nonflammable in wet state. Post-formable and heat resistant.

K. 3M Fastbond Pressure Sensitive Adhesive 4224NF—Water-based carpet adhesive is plasticizer resistant and has an aggressive tack. Repositionable for adhering carpet matting tiles to the floor. For use with glass, paper, steel, galvanized steel, bare and clad aluminum, fabric, and foam.

L. Loctite MR 5414 Black Contact Adhesive—Professional, solvent-based adhesive with neoprene blends in with black-colored fabric, rubber, weatherstripping, and other porous materials. Withstands temperature extremes and is resistant to gasoline, kerosene, and other solvents. Fast drying and waterproof. Allows repositioning of the parts after initial contact.

FLOORING ADHESIVES

M. DAP 4000 Subfloor VOC, Subfloor and Deck—Bonds wet, frozen, and treated lumber.

N. DAP 7000 Subfloor and Deck—Solvent-based formulation reduces nailing requirements, floor squeaks, and nail pops. Easy gunning.

O. DAP 4000 Subfloor and Deck—Forms a permanent bond on wet, frozen, and treated lumber. Reduces nailing requirements.

P. Weldwood Multipurpose—Trowel-grade adhesive bonds many types of floor coverings. Formula provides greater shrink resistance and allows for easy repositioning during installation. Water-resistant, low-odor adhesive is nonflammable and cleans up easily with water. Ideal for Interior use.

Q. Weldwood Sheet Floor—Trowel-grade, latex-based formula is for installing synthetic, felt-backed resilient sheet goods.

R. Weldwood Ceramic Tile—Trowel-grade, latex-based adhesive for installing ceramic and mosaic tile on floors, walls, and countertops.

S. Weldwood Wood Floor—High solids, trowel-grade synthetic adhesive for installation of prefinished wood flooring.

Multipurpose/ Construction Sealants

3M 760 Hybrid Sealant—Thick paste bonds to glass, metal, wood, concrete, and ceramic. UV resistant.

3M Polyurethane Construction Sealant 525—Adheres to expansion joints, metal, wood, aluminum and PVC joinery seams, clay and concrete roof tiles.

DAP Silicone Plus Premium Sealant—Seals wood, ceramic, and horizontal cracks, gaps and holes.

DAP Window, Door, and Exterior Sealant—Adheres to wood, aluminum, vinyl, plaster, drywall, masonry, stone, brick, glass, and concrete.

Dow Corning 700 Industrial Grade & 732 Multipurpose Sealants—Bonds concrete, glass, masonry, metal, and plastic.

GE SCS Silicone Contractors Sealant—Adheres to glass, plastic, granite, and sheet metal.

GE Contractors SCS1000 Silicone Construction Sealant—For glass, metal, glazed surfaces, and many plastics.

GE Silicone II Gasket Sealant—Adheres to glass, metal, plastic, fiberglass, granite, concrete, and wood.

4KM87

GE Silicone II Paintable Sealant—Use on siding, trim, moldings, patios, concrete, fiberglass, plastic, metal, and wood.

Loctite 5510 Sealant—High strength adhesive paste is used for elastic bonding and sealing on various substrates.

Loctite UR 7001 Urethane Sealant—Adheres to concrete, masonry, glass, plastics, wood, and aluminum.

Surebond SB-180 Sealant—Typical applications include sealing and glazing, plumbing, interior and exterior. Cures to the touch in an hour.

Surebond SB-170 Multi-Purpose Silicone Sealant—Adheres to hard-to-stick plastics, wood, PVC, vinyl, metal, glass, and painted surfaces.

Surebond SB-188 High-Temperature Silicone Sealant—Bonds to ceramic, glass, metal, plastic rubber, wood, fiberglass.

Roof and Gutter Sealants

Roof Asphalt Filler and Sealer—Forms watertight seal on wood, masonry, fiberglass, metal, and asphalt.

Butyl-Flex Gutter and Flashing Sealant—Bonds concrete, metal, plastic, rubber, and wood. Resists weather, extreme temperatures, and shock.

Polyurethane Sealants—Provide superior adhesion to wood, metal, concrete, stone, aluminum, masonry, vinyl, fiberglass, plastic, and brick. Meet ASTM C920 Class 35.

Silicone II Gutter and Flashing—Silicone sealant adheres to most aluminum, stainless steel, wood, masonry, brick, concrete, painted surfaces, vinyl, and plastic.

Silicone II Aluminum and Metal—Adheres to most aluminum, stainless steel, masonry, brick, concrete, granite, and metal. Resists extreme heat, UV rays, and freezing temperatures.

Geocel 4500 Roof Bonding Sealant—Bonds to many common substrates including asphalt shingles, steel, concrete, EPDM, primed TPO, primed PVC, Hypalon (black only), metal, and wood.

Elastomeric Acrylic Sealant—Use on concrete, drywall, glass, many plastics, masonry, metal, porcelain, stucco, vinyl, and wood.

Window/Door Caulks, Sealants, and Glazes

ACRYLIC

A. Concrete Caulk—Use with mortar, and masonry. Paintable; cleans easily with water. Indoor/outdoor use.

B. ALEX Caulk—Adheres to wood, plaster, drywall, and masonry.

C. DYNAFLEX 230 Elastomeric Sealant—For crown molding and siding. Mildew-resistant when cured.

D. Window Glazing Caulk—For face glazing wood or metal frames. Weathertight seal.

E. MAX EXTRA Siliconized Acrylic Caulk—Mildew-resistant, paintable caulk for sealing interior and exterior windows, replacing window panes, and sealing cracks in the doorjamb or window seal.

BUTYL

F. SB-140 Skylight and Window Butyl Sealant—Flexible, one-part sealant is easy to remove and excellent for resealing and repairing leaks. Stays soft and malleable. Fast skinning and nonstaining.

HYBRID

G. ALEX PLUS Caulk—Mildew-resistant and flexible.

H. Flexible Clear Sealant—Weatherproof and mildew- and UV-resistant. Adheres to concrete, glass, brick, wood, metal, and fiberglass.

I. ALEX Fast Dry Caulk—Mildew-resistant. Paintable in 30 min.

J. Side Winder Siding and Window Sealant—Adheres to vinyl, fiber, cement, aluminum, and wood. Permanently flexible. No shrinkage, low odor. Indoor/outdoor use.

K. ALEX PLUS Sealant, Aerosol Can—Aerosol can provides excellent control without a caulk gun, for a smooth, consistent bead and no overflow.

POLYURETHANE

L. Polyurethane Sealant 540—One-part sealant cures fast with a joint movement capability ±25%. Nonstaining formula does not require mixing. Ideal for vertical and horizontal expansion joints, concrete control joints, precast and tilt-up construction, masonry expansion joints, aluminum curtain walls and storefronts, and submerged applications.

SILICONE

Flexible silicone provides a long-lasting, waterproof seal that is low odor and resists shrinking and cracking. It remains flexible after being dried or cured and can withstand higher temperatures.

M. 100% Silicone Window and Door Sealant—Seal resists cracking, crumbling, and chalking. Can be used to make gaskets. Mildew resistant. Indoor/outdoor use.

N. Silicone Plus Window and Door Sealant—Won't shrink or crack. Adheres to PVC, vinyl siding, and painted wood. Indoor/outdoor use.

O. Silicone Premium Kitchen and Bath Sealant—For use on ceramic tile, glass, porcelain, and PVC in kitchen and bath applications.

P. Silicone I Sealant—Mold- and mildew-resistant sealant accommodates 25% movement in extension and compression with excellent recovery when joints shift. Low sag or slump allows application to overhead surfaces. Resistant to sun and freezing temperatures. Adheres to wood, metal, vinyl siding, drywall/plaster, glass, and plastic.

Q. Supreme Paintable Silicone—Fast-acting caulk can be painted with a brush after 30 min. and exposed to water in as little as 30 min.

R. Silicone I Window and Door Sealant—Adheres to most wood, metal, vinyl siding, drywall, plaster, glass, and plastic. Use on doors, siding, trim, molding, baseboards, and vents. Also use around wire, pipes, and other attic/basement applications. FDA approved.

S. Silicone II Window and Door Sealant—Twice the stretch of Silicone I. Withstands extreme joint movement.

T. Silicone II Window and Door Sealant—Stretches and compresses with joint movement.

DAP

100% Silicone Sealant

One-component, acetoxy cure material is ideal for caulking and sealing. Provides a durable, watertight seal that won't crack or shrink. It offers long-lasting flexibility and is safe for incidental food contact. Cured sealant is mildew resistant.

Kitchen, Bath, and Plumbing High-Performance Sealant

Kwik Dry formula is paintable and water-resistant in ½ hr. Waterproof seal with Microban protects against mold and mildew up to 10 yr.

Kitchen and Bath Sealant with Microban

Antimicrobial protection fights mold, mildew, odors, and stains. Kwik Seal Plus formula provides a watertight seal with maximum adhesion and flexibility.

Premium Kitchen and Bath Sealant

Low-odor silicone formula is water-resistant in ½ hr. Forms a flexible, waterproof seal with excellent adhesion.

Kwik Seal

Acrylic formula is mold- and mildew-resistant. Dries tack-free in 15 min. Resists cracking, crumbling, and shrinking.

Latex caulk and sealant form a mildew-resistant, watertight seal. Water cleanup.

Phenoseal Adhesive Caulk

Mildew-resistant and watertight seal. Water cleanup.

DOW CORNING

DOWSIL Silicone Base Clear Cartridge Sealant is for use on concrete, glass, masonry, metal, plastic, and wood. DOWSIL 786 RTV Sealant is designed to seal nonporous surfaces around showers, tubs, sinks, and plumbing fixtures where conditions of high humidity and temperature extremes exist.

GE

Waterproof sealants won't shrink or crack over time.

Silicone II Sealant

3LA50, 4UH01, 3LA48, and 3LA49 are low odor and mildew resistant. Sealant remains permanently flexible. 22N770 is a flexible, mold- and mildew-resistant formula that accommodates 25% movement in extension and compression with excellent recovery. Useful for horizontal and vertical overhead surfaces. 5PWD3 and 5PWD4 feature low VOC.

Silicone II Supreme Sealant

Sealant is permanently flexible, won't corrode metals, is water-ready in ½ hr., and resists mold up to 10 yr. Mildew- and UV-resistant.

Silicone I Sealant

Keeps water away from kitchen and bath applications. Flexible formula is mold and mildew resistant. Accommodates 25% movement in extension and compression with excellent recovery when joints shift. Applies to horizontal or vertical overhead surfaces. For use on laminate, porcelain, glass, metal, plastic, granite, wood, and most ceramic tile.

Supreme Paintable Sealant

Modified silicone formula is ready for paint in ½ hr. Not sticky or stringy. Stays mold- and mildew-free for up to 10 yr.

HOMAX

Extra-wide caulk strip is a preshaped, flexible, peel-and-stick strip that seals out moisture that can damage walls by eliminating the gap where dirt can accumulate.

Marine Sealants

Marine Adhesive Sealant Fast Cure 4000 UV and 4200—Flexible bond for wood, fiberglass, gelcoat, plastics, and metals. Use for boat hardware above or below water line. 1RWH9 has VOC levels that meet SCAQMD requirements.

Marine Adhesive Sealant 5200 and 5200 UV—Flexible sealant for wood, fiberglass, metal and most plastics.

550 Adhesive Sealant—Medium paste forms permanent elastic bond on concrete, wood, aluminum, and most lacquered metals, polyester, glass, and stone.

730 UV Hybrid Sealant—Bonds material with differing thermal expansion.

740 UV Hybrid Sealant—Elastic bond for concrete, wood, aluminium, most lacquered metals, polyester, glass, stone, and ceramic. Can replace rivets and other fasteners.

DOWSIL 733 Glass and Metal Sealant—Conventional acetoxy RTV sealant with adhesion promoter.

Loctite Gasket Dressing SI 592—For use as a permanent seal above or below the water line.

Pick-Proof Adhesive/Sealant

- Sealant container: 10.3 oz. cartridge

Formulated for use in correctional institutions, this hard-setting adhesive features a tensile strength of 2000 psi and resists cracking. Adheres to bars, vents, windows, doors, covers, and grids.

Description	Begins to Harden	Full Cure	Application Temp. Range	Color	Item No.

Pneumatic Caulk Guns

- ¼" MNPT inlet
- 326 lb. thrust ratio

For Bulk Containers—Barrel of the gun holds the caulk while the gun's plunger presses against the caulk packed in the barrel end and squeezes caulk from the top of the barrel and through a nozzle attachment on the gun. Leaves no packaging to dispose of but requires cleaning after use to remove caulk residue.

For Cartridges—Caulk cartridges fit into the barrel of the gun while the gun's plunger presses against the end of the cartridge and squeezes caulk through the cartridge nozzle. Gun requires less frequent cleaning than bulk or sausage pack guns because the cartridge minimizes contact between the caulk and the gun.

For Sausage Packs—Barrel of the gun accepts caulk in sausage packs (chubs) while the gun's plunger presses against the end of the pack and squeezes caulk through a nozzle. They compress the pack to a compact plug and leave less packaging waste than cartridge guns.

Battery Powered Caulk Guns

- Variable-speed triggers
- 360° rotating collar provides excellent bead control

Carriage design allows the user to quickly and easily change between 10-oz., Quart, and Sausage-style material containers.

12V—Compact, lightweight guns provide up to 400 lb. of push force for dispensing everyday construction sealants and adhesives. Include auto-reversing anti-drip, seal puncture tool, and durable hang hook.

18V—All-metal gears provide 950 (Milwaukee) or 1100 (Makita) lb. of force for steady dispensing of the highest viscosity materials. Anti-drip mechanism instantly stops leaks. Makita models have an LED light.

Gorilla Glue

- Full cure: 24 hr.

Dries White and All-Purpose Glue—Bonds wood, stone, metal, ceramic, and more. White dries faster. Waterproof.
- Temp. range: -40° to 212°F

Super Glue—Bonds to most common building materials. Anticlog cap with a metal pin inside ensures an airtight seal for maximum reusability.
- Temp. range: -65° to 220°F

Wood Glue—Bonds wood-to-wood without leaving an orange afterglow. FDA approved for indirect food contact.
- Temp. range: 0° to 150°F

Wood Glues

DAP WELDWOOD

Carpenter's Glue—Sets fast, grips tight, and sands easily. Solvent resistant. Nontoxic.

TITEBOND III ULTIMATE WOOD GLUE

Waterproof formula meets ANSI/HPVA Type I water-resistance specification. Has longer open assembly time and lower application temperature. Sands easily. Interior/exterior.

TITEBOND II

Premium and Extend Wood Glue—Meet ANSI Type II water-resistance specification. 3KRU6 and 3KRU7 have a longer set time. Interior/exterior.

Wood Glue—Great for general woodworking with porous and semiporous materials. ANSI Type II.

TITEBOND ORIGINAL WOOD GLUE

Aliphatic-resin glue sets quickly to reduce clamp time. Resists heat, solvents, and mildew. 3KRU4 and 4EML7 have a longer set time.

TITEBOND

Quick & Thick, No Run/No Drip—Glue dries twice as fast and three times as thick as traditional PVAs. Bonds to multiple surfaces.

Polyurethane Wood Glue—Combines a long 20-min. working time with a short 45-min. clamping time. Waterproof formula is excellent for wood to wood, metals, ceramics, most plastics—porous and nonporous materials. ANSI Type I and Type II.

Gorilla Tape

Weatherproof, airtight tape is easy to tear by hand. For indoor and outdoor use.

Double-Sided Tape—Bonds plastic, metal, wood, glass, brick, ceramic, and stone. 45DV48 holds up to 15 lb. on smooth and rough surfaces for easy hanging; 49UU23 is an industrial strength double-sided tape with a heavy duty bond. Holds up to 30 pounds. Ideal for indoor and outdoor projects and sticks to smooth and rough surfaces.

Duct Tape—Double-thick adhesive grips smooth, rough, and uneven surfaces. Withstands moisture, UV rays, and temperature extremes.

Repair Tape—Fix, patch, seal, hold, and protect almost any surface.

Hot Glue Guns and Sticks

CORDLESS GLUE GUNS

Master PortaPro Glue Gun

Butane heat source has push-button piezo ignition, glue flow cutoff, fuel flow safety lock, and fuel-refill indicator. 1UBG6 includes 4 brass nozzles, eight ½" x 6" glue sticks, and plastic case.

ELECTRIC GLUE GUNS

12-Pc. Heavy-Duty Glue Gun Kit

Includes 3 special-use nozzles, nonstick work pad, 6 high-temperature glue sticks, wire stand, and carrying case.

DualMelt Pro Glue Gun Kit

Dual-temperature glue gun has On/Off light, protected nozzle, fold-out stand, cushion grip, slip-resistant trigger action, and auto shutoff.

Heavy-Duty Glue Guns

High temperature setting bonds cardboard, ceramics, leather, light metals, and wood. Low temperature setting bonds heat-sensitive parts such as fabrics, foam materials, and plastics.

SUREBONDER

36FL79 professional gun is a light-duty, high-temperature gun. 20YV40 and 20YV41 are medium-duty high-temperature guns. 39AN01 is a high-temperature gun for fixed temperature applications. Heavy-duty gun 20YV44 features cartridge heaters with adjustable temperatures.

Drill Bit Information

DRILL BIT TYPES

Double-ended drill bits have cutting edges on both ends.

Extended-length drill bits are long bits that can drill deep holes and access hard-to-reach areas.

Flat-bottom drill bits create holes with flat bottoms. They are also used for counterboring holes, drilling holes at an angle, and creating intersecting holes and half holes.

Jobber-length drill bits provide a good balance of strength and accuracy when drilling a variety of materials.

Mechanics-length drill bits are short drill bits that provide more strength and rigidity and are less likely to break or shear when drilling hard materials than longer bits.

Micro drill bits create precise, tiny holes with close tolerances.

Reduced-shank drill bits can drill large holes while still being compatible with standard drill chucks.

Screw-machine are shorter than jobber-length and maintenance-length drill bits of the same size. Sometimes called stub-length drill bits, they provide more strength and rigidity and can drill straighter holes than longer drill bits. Their short length also allows them to access tight spaces where longer drill bits cannot fit..

Solid spade drill bits make shallow holes and can drill into thin sheet metals without deforming the material.

Spotting drill bits create a shallow hole that helps prevent drill bits from walking, or moving, when starting to drill.

Spot-weld drill bits are used to drill out a spot weld that is holding two or more thin sheets of metal together.

Step chamfer drill bits create a hole with a countersink in one pass.

Taper-length drill bits have long flutes and can drill deep holes.

Coolant Through

Left Hand Cutting Direction

Right Hand Cutting Direction

FEATURES

Coolant-through drill bits have holes that allow coolant to flow to their tip to reduce heat and help clear chips during drilling.

Left-hand cutting direction drill bits can be used in reverse-drilling applications, such as removing broken screws from a hole.

Right-hand cutting direction drill bits are the standard option for making holes in a workpiece.

FLUTE STYLES

Fast-spiral flutes evacuate chips more quickly than standard spiral flutes.

Helical flutes create smaller chips and evacuate them more quickly than standard spiral-flute drill bits.

Spiral flutes pull chips out of the hole during drilling.

Parabolic flutes are wide, deep spiral flutes that maximize chip flow and heat dissipation and eliminate the need to reduce feed rates in deep drilling applications.

Straight flutes resist breaking when drilling into hard and abrasive materials and help evacuate chips in horizontal drilling applications. They generate minimal heat during drilling and leave a smooth finish on the hole without requiring a reaming pass.

FINISHES

AlCrN coating protects drill bits from wear during dry, high-speed machining applications. It is harder, resists cracking and oxidization better, and performs better in high-feed applications than a TiAlN coating. It also resists high heat better than an AlTiN coating.

AlTiN coating protects drill bits from wear when drilling hard and abrasive materials. It is more resistant to high heat than a TiAlN coating.

Black/gold finish lubricates the bits and provides some resistance to wear and rust.

Black-oxide finish improves the bits' wear resistance and chip flow when drilling ferrous metals.

Bright finish is not affected when the drill bits' cutting edges are resharpened

EgiAs coating provides excellent hardness and heat resistance. It protects drill bits from wear in high-speed drilling applications on steel, cast iron, and hardened steel with a Rockwell Hardness of 35 to 50 HRC.

Straw/bronze finish protects drill bits from wear.

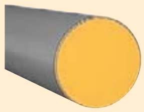
TiAlN coating withstands high temperatures and protects drill bits from wear during high-speed, dry machining applications with difficult-to-machine ferrous metals.

TiCN coating protects drill bits from wear and is harder and more wear-resistant than a TiN coating.

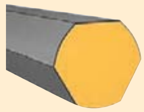
TiN coating protects drill bits from wear, increases chip flow in softer materials, and allows the bits to run at higher speeds than drill bits with a black-oxide finish.

TiNAl coating provides a low-friction surface and is suitable for drilling most materials.

WXL coating protects drill bits from wear and is designed for drilling nonferrous metals and steels with a Rockwell hardness of up to 50 HRC. It is harder and has a higher oxidation temperature than a TiAlN coating.



Straight Shank



Straight Shank with Three Flats

SHANK TYPES

Hex shank provides maximum surface contact with a drill chuck to prevent drill bits from slipping in the chuck during drilling.

Straight shank is the standard option and can be installed in a drill chuck.

Straight shank with three flats installs into a drill chuck and has three flats that prevent the shank from slipping in the chuck during drilling.

Threaded shank screws into a threaded drill adapter to enable drilling in tight areas and ensure the bits will not fall out of the drill

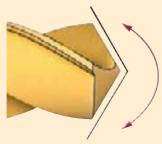
MATERIALS

Carbide drill bits are harder, more wear resistant, and more heat resistant than high-speed steel or cobalt drill bits and require a rigid setup.

Carbide-tipped drill bits have carbide cutting edges that provide excellent hardness, wear resistance, and heat resistance. The bits' body is made from a material that absorbs more vibration and shock than carbide, which helps keep the bits from breaking.

Cobalt drill bits tolerate higher drilling speeds and are harder and more wear-resistant than high-speed steel drill bits. They provide some shock absorption and can be used in hand-held power tools.

High-speed steel drill bits provide more flexibility and absorb more shock and vibration than cobalt and carbide drill bits, making them suitable for use in manual drilling machines and handheld power tolls.



DRILL BIT POINT ANGLE

Drill bit point angle is the included angle at a drill bit's tip where its cutting edges meet. Drill bits with a small (or steep) drill bit angle, such as a 90° drill bit angle, are used for drilling softer materials such as plastic. Drill bits with a 118° drill bit angle are commonly used for drilling a range of materials, such as wood, aluminum, and plastic. Drill bits with a large (or flat) drill bit angle, such as a 135° split-point angle, are used for drilling harder materials such as stainless steel or titanium.

For more information on Drill Bits, see page 2239.

Drill Bit Blanks

- Ground finish
- Carbide material
- Dia. tolerance: +0.0000/-0.0005"
- Additional material and sizes are available on Grainger.com®

These solid carbide drill bit blanks come in standard sizes expressed in fractional inches, which are the most common trade size used for drill bits. They are harder than cobalt steel and high-speed steel drill bit blanks. They provide good wear resistance when drilling into the toughest materials. Machined to create custom drill bits with precise dimensions to suit specific applications. Typically used to check size of a drilled hole or to create gauges, drifts, punches, rollers, locating pins, spindles, or knockout pins.

Series 777 Tool Blanks

- Unfinished
- Carbide material
- Parallelism and flatness tolerances: ±0.020"
- Minimum grind stock: Thickness: +0.008"; Width: +0.012"; Length: +0.008"
- Additional material and sizes are available on Grainger.com®

Commonly used as wear parts, tools, grinder rests, and appliance parts, these solid C-2 grade medium-grain carbide strips contain 6% to 8% cobalt.

Sharpener
6YB32

Sharpening Attachment
3ZH44

Drill Doctor — The Drill Bit Sharpener | GENERAL®

Drill Bit Sharpeners

Sharpeners—Easy chuck alignment system for quick, precise sharpening. 110V, 1.75 amp motor produces 20,000 rpm. Long-lasting diamond wheel sharpens standard twist, HSS, TiN, cobalt, carbide, and masonry drills in under 60 sec. 6YB32 and 6YB33 can be used with split point bits. 6YB32 includes carrying case.

Sharpening Attachment—Locks into 5 standard angles (88°, 68°, 59°, 49°, and 41°) to quickly resharpen drill bits. Use with ANSI, OSHA, UL Listed standard electric bench or surface grinders.

Drill Bit Sharpeners

DAREX

For standard conic and split point styles. Drill Sharpener V-390 6MVH6 is for light-duty, intermittent jobs. Drill Sharpener XT-3000 6MVH7 is an advanced manual sharpener for use on a variety of drill sizes and styles. Drill Sharpener with Auto Sharpener XT-3000 6MVK0 performs the same functions as 6MVH7, but automates the drill sharpening process for higher volume requirements.

Center Drills

Center drills consist of a pilot drill and a countersink and are used to create holes at the center of a piece of stock so it can be turned between centers on a lathe in metalworking tasks. Drills with a **plain tip** are the standard choice for creating center holes. Drills with a **radius tip** have a tapered flute that allows them to create more accurate holes than other styles of center drills. Drills with a **bell tip** have a 120° chamfer on their tip that bevels the outer edge of the center hole to strengthen it and protect it from damage in applications where the piece of stock will go through multiple machining passes. **Jig-bore** drills have a flat on the shank for securing them to a jig borer machine with a set screw.

High-Speed Steel—Provides good wear resistance in a wide range of machining applications.

Cobalt Steel—Provides good wear resistance when machining hard materials at high speeds and is harder than high-speed steel.

Powdered Metal—Stronger than high-speed steel and cobalt steel.

Solid Carbide—Provides excellent wear resistance when machining the toughest materials, such as stainless steel.

High-Speed Steel Countersinks

- 82° countersink angle
- Bright finish

Countersinks expand the top of an existing hole in a workpiece to allow countersinking screws to install flush with the surface of the workpiece. This helps prevent the workpiece material from swelling when a screw is inserted in the hole and tightened down.

Fast-Cut 1-Flute—Leaves clean edges on holes and has a high, positive rake that reduces vibration.

3-Flute—Typically provides better chip clearance and performs better when machining stringy materials than countersinks with more flutes.

6-Flute—Provides fast material removal and leaves a smooth finish. Removes more material with each revolution and typically provides more wear resistance than countersinks with fewer flutes.

Countersink Material Information

High-Speed Steel—Provides good wear resistance in a wide range of countersinking applications.

Cobalt Steel—Provides good wear resistance when machining hard materials at high speeds and is harder than high-speed steel.

Bright (Uncoated)—Unaffected when the countersink's cutting edges are resharpened.

TiN—Protects against wear, increases chip flow in softer materials, and allows for higher speeds than bright (uncoated) finish.

TiAlN—Protects against wear in dry, high-speed machining tasks and can withstand high temperatures.

Anti-Vibration Cobalt Steel Zero-Flute Countersinks

Zero-flute countersinks minimize vibration and chatter during use and prevent chips from sticking to the tool. They leave smooth, clean edges as they expand the top of a hole in countersinking tasks. Commonly used for installing aluminum frame storefronts, glass and window design, and architectural metalworking applications.

General Purpose 3-Flute Countersinks

KEO

Three-flute countersinks typically provide better chip clearance and perform better when machining stringy materials than countersinks with more flutes. These countersinks are compatible with a range of materials and are the most common choice for expanding the top of a hole in countersinking tasks.

Smooth-Finish 6-Flute Countersinks

Six-flute countersinks provide fast material removal and leave a smooth finish as they expand the top of a hole in countersinking tasks. They remove more material with each revolution and typically provide more wear resistance than countersinks with fewer flutes.

Carbide Countersinks

Carbide countersinks provide excellent wear resistance when machining the toughest materials, such as stainless steel.

Fast-Cut 1-Flute—Leaves clean edges on holes and has a high, positive rake that reduces vibration.

3-Flute—Typically provides better chip clearance and performs better when machining stringy materials than countersinks with more flutes.

6-Flute—Provides fast material removal and leaves a smooth finish. Removes more material with each revolution and typically provides more wear resistance than countersinks with fewer flutes.

Cobalt Steel Counterbores with Built-In Pilots

Counterbores make a flat-bottomed cavity at the top of a hole so that a bolt, nut, or other part is hidden beneath or sits flush with the top of the hole when installed into it. Also called solid pilot counterbores, these counterbores have a built-in pilot that keeps them centered in the hole to ensure a level seat. The pilot cannot be removed. Cobalt steel counterbores provide good wear resistance when machining hard materials at high speeds. For additional sizes, see Grainger.com®.

Broaches

HS Hassay Savage Company

- High-speed steel

Broaches machine keyways and other shapes into a hole. **Davis-style keyway** broaches create precise keyways in the bore holes of pulleys, gears, washers, and other shaft-mounted parts to lock them to keyed shafts. **Hex** and **square** broaches punch hexagonal or square holes in fixtures, jigs, and sockets. Hex broaches turn a round pilot hole into a hexagonal hole in a single pass. Square broaches turn a round pilot hole into a square hole in a single pass.

Adjustable Hand Reamers

- High-speed steel
- Black-oxide finish
- Sets supplied in wooden box

Adjustable hand reamers have nuts and straight blades that can be adjusted to allow the tool to enlarge or finish holes of different sizes. The blades can be sharpened and replaced. The reamers push chips forward into the hole and are suitable for reaming through holes. They are held with a tap wrench, adjustable wrench, or vise and slowly rotated to feed them into a hole.

YANKEE

High-Speed Steel Straight Shank Expansion Reamers

These reamers have an adjustment screw that expands the size of their cutting head so it can be reground to its original size. This lets users compensate for wear on the reamers' cutting edge to extend the tools' life. The reamers enlarge or finish a hole to a precise tolerance or size.

OSG Super Tool, Inc. YANKEE CLEVELAND

Chucking Reamers

- Straight shank
- Non-coolant-through design

Chucking reamers mount to a compatible machine such as a drill press, lathe, or screw machine. They enlarge or finish a hole to an exact tolerance or size for a precise fit when installing fasteners or other parts, and they typically have a 45° chamfer on the cutting edge to maximize accuracy as they enter the hole. **Carbide** reamers are suitable for machining the toughest materials. **Carbide-tipped** reamers offer the strength and wear resistance of carbide on just the cutting edge. **Cobalt** reamers are suitable for machining hard materials at high speeds. **High-speed steel** reamers are suitable for general purpose applications. **Right-hand spiral-flute** reamers pull chips out of the hole. **Straight-flute** reamers push chips into the hole.

Carbide, Straight-Flute 21T225

Taper Pin Reamers

- High-speed steel
- Bright (uncoated) finish

Taper pin reamers enlarge, finish, or shape holes for a precise fit when installing taper pins into the hole. They have a 1/4" taper to the foot and are made from high-speed steel, which offers good wear resistance in general purpose metalworking applications.

Helical—Reduce the size of the chips created during reaming and prevent chips from packing in the flutes. Operated with a machine such as a drill press, lathe, or screw machine.

Spiral—Pull chips out of the hole during reaming, which helps prevent damage to the reamers and workpiece. Suitable for reaming applications with blind holes and interrupted cuts. Operated with a machine such as a drill press, lathe, or screw machine.

Straight—Push chips forward into the hole and are the most commonly used style of reamer. Operated with a tap wrench, adjustable wrench, or vise.

High-Speed Steel Bridge Reamers

Bridge reamers install into compatible power tools to enlarge, debur, and finish holes in structural materials to a specific size. They have tapered flutes that ease their entry into rough-cut or misaligned holes. Designed for reaming difficult-to-machine materials such as iron and structural steel in applications where extreme precision is not required. Also commonly used to ream rivet holes in parts for automobile, bridges, rail cars, ships, and pressure vessels.

HEX NUT SHANK

Hex nut keeps the reamer securely in place in tools that have a square drive. Typically used to ensure the reamer won't come loose when it's used in a power tool that is being operated at a high location. **Hex nut shank with safety magnet** also have a magnet on the shank and provide a stronger hold than reamers that are secured with only a hex nut.

MORSE TAPER SHANK

Can be directly inserted into the spindle of a compatible tool or into an adapter such as a Morse taper sleeve or socket. This maximizes efficiency when installing and removing the reamers. These reamers provide accurate centering, and their self-locking taper shank is held in place by the friction between the shank and the toolholder.

STRAIGHT SHANK

Straight shank reamers with safety collars prevent the reamer from going too deep into the workpiece. **Straight shank reamers with three flats** are used in pneumatic or electric power tools.

Drill/Screw Extractor Set 4DZL8

WESTWARD · Chicago-Latrobe · IRWIN HANSON · Alden · CLE-LINE

Screw and Drill Extractor Sets

High-carbon steel construction, heat-treated and tempered for long life.

Multi-Spline—Use to remove broken studs, bolts, socket screws, and fittings for high torque applications. Left-hand spiral design provides extra gripping power.

Spiral Flute—Tapered left-hand spiral flutes grip screws firmly.

Straight Flute—Provide maximum bite without binding or chewing.

Drill/Screw Extractor Sets—Include both screw extractors and drill bits.

For Removing Studs, Bolts, Screws	No. of Pieces	Includes	WESTWARD Item No.	CHICAGO-LATROBE Item No.	IRWIN HANSON Item No.

Tap Information and Tap/Drill Size Reference Charts

TAP TYPES

Chip-Free Thread-Forming Taps

Press against the sides of a hole to form threads, and don't create chips. Produce cleaner, stronger, and more accurate threads than taps that cut threads.

Pipe and Conduit Thread Taps

Used for internal threading of pipes, pipe fittings, and holes.

Spiral-Flute Taps

Spiral flutes pull chips out and away from the hole to prevent chips from packing in the hole.

Spiral-Point Taps

An angular point pushes chips in front of the tap, which helps keep the tap's flutes from clogging.

Straight-Flute Taps

Chips move into the taps' straight flutes but are not evacuated during threading.

MATERIALS

Carbide

Provides maximum hardness and excellent resistance to heat and wear. Suitable for tapping hard materials at high speeds and requires a rigid setup such as a CNC machine.

Carbon Steel

Suitable for thread repair tasks that do not require high accuracy.

Cobalt

Harder and more wear-resistant than high-speed steel. Suitable for high-speed tapping in hard materials.

High-Speed Steel

Offers more resistance to abrasion and heat than carbon steel and provides good wear resistance in a range of materials.

Powdered Metal

Tougher and less likely to break than cobalt and high-speed steel. Finishes and Coatings

Black Oxide

Retains lubricants to improve wear resistance and chip flow.

Bright (uncoated)

Provides a smooth, polished surface.

CrC/C

Multilayer coating with an inner layer of TiN and an outer layer of CrC/C. Protects against wear when tapping ferrous and nonferrous metals.

Diamond

Offers excellent hardness and protects against wear when threading abrasive materials.

Hardlube

Features an inner layer of TiAlN that withstands high temperatures and protects against wear and an outer layer of WC/C that helps prevent chips from sticking to the tool.

TiCN

Harder and more wear-resistant than TiN coating.

TiN

Resists wear and allows for faster speeds than bright finish.

CHAMFERS

Bottoming

1 to 2 chamfered threads in front of the tap. Used for threading near the bottom of blind holes.

Modified Bottoming

2.5 to 3 chamfered threads in front of the tap. Used primarily in blind holes.

Semi-Bottoming

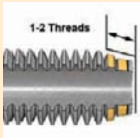
2 to 2.5 chamfered threads in front of the tap. Used primarily in blind holes.

Plug

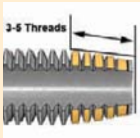
3 to 5 chamfered threads at the front of the tap. Used in through holes and blind holes with adequate space for chips to accumulate in front of the tap.

Taper

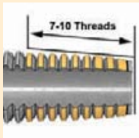
7 to 10 chamfered threads at the front of the tap. Used in through holes.



Bottoming Thread Chamfer



Plug Chamfer Thread



Taper Chamfer Type

PITCH DIAMETER LIMITS

A letter followed by a number which shows the tolerance of pitch diameter over the basic pitch diameter.

***Spiral Point*

Die Sets

- Right-hand thread direction

Die sets contain multiple carbon steel hex dies for restoring damaged or rusted external threads on metal and plastic parts in general purpose threading tasks. The dies are turned with a die wrench or a standard wrench, and each die can repair one size of thread.

For more information on taps, see page 2261.

Tap and Die Sets

High-Speed Steel Taps & High-Speed Steel Dies 1PZ44

Sets contain multiple taps and dies for threading tasks. Taps create internal threads in holes, and dies create or repair external threads on parts that will be installed in the holes.

Combination Drill, Tap & Countersink Set 6EXL3

Combination Drill, Tap and Countersink Sets

- Right-hand thread direction
- High-speed steel material

These sets contain multiple combination drill-tap-and-countersink tools in a range of sizes. Combination drills, taps, and countersinks make a hole, create threads in the hole, and countersink the top of the hole in one pass.

No. of Pieces	Thread Sizes Included	Finish - Machining	Brand	Item No.

Combination Drills, Taps and Countersinks

- Right-hand thread direction
- High-speed steel material
- Bright (uncoated) finish

These combination tools drill a hole and create threads in the hole in one pass. They also create a countersink at the top of the hole that allows a screw to sit flush with the top of the hole when it is screwed into the hole.

High-Performance Chip-Free Thread-Forming Taps

- Right-hand flute direction

High-performance chip-free taps are harder and more wear-resistant than general purpose chip-free taps. They provide better precision and accuracy than general purpose taps when used in designated materials.

REGAL CUTTING TOOLS

Acme Taps

- High-speed steel material
- Bright (uncoated) finish
- 4 flutes
- 2G thread limit/class of fit

These taps create trapezoidal Acme threads, which have a 29° thread angle and are stronger than similarly sized square threads. Sometimes called tandem taps, Acme taps are used for threading through holes on parts that allow rotation or transversing (straight-line) movement on equipment that will bear heavy loads, such as jacks, valves, and presses. They are installed in tap holders in rigid setups such as drill presses and milling machines.

Pulley Taps

- Right-hand thread direction
- High-speed steel material
- 4 flutes
- H3 thread limit

Pulley taps make internal threads in set-screw holes on pulley assemblies, and they each have a long shank that acts as an alignment guide as the tap reaches through a pulley hub to access the holes. The taps can access hard-to-reach holes that a standard tap could not reach, and their shank diameter is roughly equal to their thread diameter.

Extension Taps

- Right-hand thread direction

Extension taps have long shanks that let them tap deep or hard-to-reach holes. They create internal threads in holes, and their reduced-diameter shank clears the hole when tapping a hole at a depth that is greater than the taps' thread length.

Black Oxide Finish, High-Performance Spiral Point 2PFH8

TiCN-Coated, High-Performance Spiral Point, Metric Coarse, 3 Flute 54LJ96

TiCN-Coated High-Performance Spiral Flute 54MJ63

Additional tap sizes, materials, and coatings are available on Grainger.com®.

Pipe and Conduit Thread Taps

- Right-hand thread direction

Pipe and conduit thread taps create or repair internal threads in pipe, conduit, and fittings so they can mate with parts that have matching external threads.

Interrupted-Thread Pipe and Conduit Thread Taps

NPT, 3 Flute
33ZL63

- Right-hand thread direction

These taps have an interrupted thread pattern in which every other tooth has been removed from the cutting edge. They offer more space for chip evacuation than taps with a standard thread pattern, which allows large chips to be cleared from the taps during threading tasks.

Short-Projection Pipe and Conduit Thread Taps

NPT, 5 Flute
33ZM72

- Right-hand flute direction
- High-speed steel material

These taps have fewer tapered threads at their tip than standard pipe and conduit taps. They don't have to enter deep into the workpiece to produce full threads and are suitable for tapping shallow holes.

For more information on taps, see page 2261.

Bright (Uncoated) High Speed Steel Spiral Flute, UNC, 2 Flutes
33ZJ83

Screw Thread Insert (STI) Taps

STI taps create an oversized thread inside a hole so that a helical-coil screw thread insert can be installed in the hole. The insert distributes the load across the length of the threads and improves the threads' strength when a fastener with a standard screw thread size is screwed into the hole.

High-Performance Spiral-Flute Taps

- Right-hand thread direction

High-performance spiral-flute taps create internal threads in blind holes and are harder and more wear-resistant than general purpose spiral-flute taps. They provide better precision and accuracy than general purpose taps when used for threading holes in designated materials.

General Purpose Spiral-Point Taps

- Right-hand thread direction

General purpose spiral-point taps create internal threads in through holes and are intended for threading a wide range of materials. These taps are made from high-speed steel.

Additional tap sizes, materials, and coatings are available on Grainger.com®.

OSG WIDIA GTD WALTER PROTOTYP

High-Performance Spiral-Point Taps

- Right-hand thread direction
- Plug chamfer

High-performance spiral-point taps create internal threads in through holes and are harder and more wear-resistant than general purpose spiral-point taps. They provide better precision and accuracy than general purpose spiral-point taps when used for threading holes in designated materials.

Carbide Straight-Flute Machine Taps

- Right-hand thread direction

Straight flute machine taps are installed in a toolholder on a machine and are used to create or repair internal threads in blind holes and through holes. These carbide taps provide excellent hardness and heat resistance and can be used for tapping hard materials at high speeds.

Tap Wrenches

Tap wrenches are used to manually turn taps when repairing or creating threads in holes.

Fixed T-handle wrenches are more compact than straight-handle wrenches.

Ratcheting wrenches can be turned and repositioned quickly when working in tight spaces.

Sliding T-handle wrenches have a T-handle that slides from side to side, allowing them to be turned in tight spaces. They are more compact than straight-handle wrenches.

Straight-handle wrenches have a long, straight handle that provides more leverage than a T-handle.

End Mill Flute, Material, and Finish Information

End mills have cutting edges on their nose and/or sides that remove material from a workpiece. They are used on computer numerical control (CNC) or manual milling machines to create parts with complex shapes and features such as slots, pockets, and grooves. Flutes on the end mills' cutting head carry the removed material away from the workpiece to prevent damage to the end mills or workpiece.

Materials

Carbide end mills provide excellent wear resistance and heat resistance and are harder than powdered-metal and cobalt end mills. They require a rigid setup.

Cobalt end mills can tolerate more vibration than carbide end mills.

Powdered-metal end mills are tougher and less likely to break than cobalt end mills.

Finishes

AlTiN is more resistant to high heat than TiN, TiCN, and TiAlN.

AlTiCrN offers higher resistance to oxidation than an AlTiN coating.

Bright (uncoated) provides a smooth, polished surface.

Diamond is only used for milling nonferrous materials such as aluminum, graphite, copper, and carbon fiber.

DLC is a cost-effective alternative to diamond finish and is used for milling abrasive materials such as stainless steel, ceramics, plastics, and aluminum alloys.

EXO is a multilayered TiAlN coating with a very smooth finish. It resists wear better than a standard TiAlN coating and withstands high speeds and high temperatures.

GMS has a lower coefficient of friction than GMX-35, which helps prevent built-up edge. It is also harder and more resistant to high heat than TiAlN and ZrN.

GMX-35 is harder and resists high heat better than TiAlN and ZrN, and it is suitable for high-speed milling and dry machining applications.

nACRo is harder and more resistant to high heat than TiAlN, TiCN, AlTiN, and AlCrN.

TiAlN withstands high temperatures, allows for faster speeds than a bright finish, and resists cracks and oxidation better than TiN or TiCN.

TiCN is harder and more wear-resistant than TiN.

TiN resists impact better than TiAlN and AlTiN.

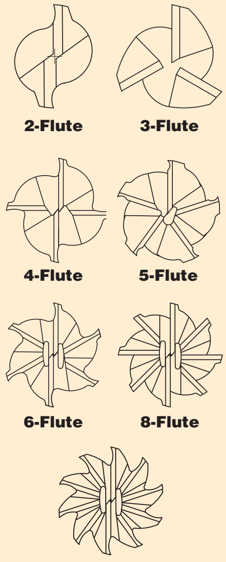
SS provides a polished surface that's smoother than a bright finish.

Taz reduces the need for coolant and is recommended for dry machining applications.

WXL is used for milling nonferrous metals and steels with a Rockwell hardness of up to 50 HRC.

WXS is used for milling nickel-based alloys and hardened steels with a Rockwell hardness of more than 50 HRC.

ZrN has a higher oxidation temperature than TiN and is used for milling nonferrous metals.



Helical-Flute Thread Mills

- Carbide material

Helical-flute thread mills have spiral flutes and provide a smoother cut than straight-flute or single-profile thread mills. They are used to create threads on tough or thin-walled materials and can create internal threads of the same pitch in a range of hole diameters, eliminating the need to change tools when threading multiple holes of different sizes. For use in CNC machines that have helical interpolation capability.

Single-Profile Thread Mills

For more information on end mills, see page 2277.

- Carbide material

Single-profile thread mills create very low side-cutting pressure and provide more control over pitch diameter and cut length during thread-milling tasks than helical-flute or straight-flute thread mills. They are suitable for threading applications with unfavorable length-to-diameter ratios and can create internal threads with a variety of pitch ranges, lengths, and diameters, eliminating the need to change tools when threading multiple holes of different sizes. For use in CNC machines that have helical interpolation capability.

Straight-Flute Thread Mills

- Carbide material

Straight-flute thread mills are suitable for general purpose thread-milling applications and create internal threads of the same pitch in a range of hole diameters, eliminating the need to change tools when threading multiple holes of different sizes. They provide good strength but require a rigid machine setup. For use in CNC machines that have helical interpolation capability.

Carbide End Mill Sets

- ⅛ in, 3/16 in, ¼ in, ⅜ in, ½ in sizes included
- Center cutting

Sets contain five end mills in a range of sizes and are ideal for job sites that frequently use various sizes of end mills in machining tasks.

Square End Mills

Square end mills have a square nose and create a flat-bottomed groove with 90° inside corners in milling tasks. Also called square-nose end mills, they are used for counterboring, side and face milling, and milling square shoulders.

General purpose end mills are intended for milling a wide variety of common materials.

High-performance end mills are used in production milling.

Roughing end mills remove large amounts of material from a workpiece more quickly than roughing/finishing and finishing end mills.

Roughing/finishing end mills remove large amounts of material and create a smooth finish on the workpiece at the same time.

Finishing end mills create a finer finish on the workpiece than roughing and roughing/finishing end mills.

Ball End Mills

Ball end mills have a rounded nose and create a round-bottomed groove in milling tasks. Also known as ball-nose end mills, they are used to make round-bottomed slots and pockets or mill complex shapes without sharp corners.

General purpose end mills are intended for milling a wide variety of common materials.

High-performance end mills are used in production milling.

Roughing end mills remove large amounts of material from a workpiece more quickly than roughing/finishing and finishing end mills.

Roughing/finishing end mills remove large amounts of material and create a smooth finish on the workpiece at the same time.

Finishing end mills create a finer finish on the workpiece than roughing and roughing/finishing end mills.

Corner-Radius End Mills

Corner-radius end mills have a square nose with slightly rounded corners that help distribute cutting forces evenly to prevent damage to the end mill and extend its life. Sometimes called bull-nose end mills, they create a flat-bottomed groove with slightly rounded inside corners in milling applications that require a specific radius.

High-performance end mills are used in production milling.

Roughing/finishing end mills remove large amounts of material and create a smooth finish on the workpiece at the same time.

Finishing end mills create a finer finish on the workpiece than roughing and roughing/finishing end mills.

High-Performance Roughing/Finishing Carbide Corner-Chamfer End Mills

High-performance roughing/finishing carbide corner-chamfer end mills are used in production milling. They each have a square nose with slightly angled corners that help distribute cutting forces evenly to prevent damage to the end mill and extend its life. They create a flat-bottomed groove with slightly chamfered inside corners in milling applications that do not require a specific radius size. Roughing/finishing end mills remove large amounts of material and create a smooth finish on the workpiece at the same time.

General Purpose Finishing Carbide Corner-Chamfer End Mills

General purpose finishing carbide corner-chamfer end mills are intended for milling a wide variety of common materials. They each have a square nose with slightly angled corners that help distribute cutting forces evenly to prevent damage to the end mill and extend its life. They create a flat-bottomed groove with slightly chamfered inside corners in milling applications that do not require a specific radius size. Finishing end mills create a finer finish on the workpiece than roughing and roughing/finishing end mills.

Double-End Straight-Shank Corner-Rounding End Mills

Double-end corner-rounding end mills have a straight shank with concave cutting edges on both ends. They create rounded outside edges on a workpiece in milling tasks and can accomplish more milling tasks than single-end end mills before they need to be replaced.

Carbide Drill Mills

MICRO 100 WIDIA HANITA

Drill mills have a nose with a pointed tip and can drill holes or create angled features in a piece of stock. They are used for slotting, side profiling, chamfering, spotting, countersinking, and cutting grooves in milling tasks.

Keyway End Mills

YG CLEVELAND

Keyway end mills make slots in parts so that key stock can be inserted into the slots when mating other components with the parts. These end mills are typically undersized, which means they create an undersized slot to ensure a snug, secure fit when key stock is inserted into the slot.

Double-End Straight-Shank Chamfer Mills

Double-end chamfer mills have a straight shank with angled cutting edges on both ends and can accomplish more milling tasks than single-end chamfer mills before they need to be replaced. They are used to create chamfered or beveled edges, to debur edges, and to spot and countersink holes in one step prior to drilling.

Router Bit Sets

Router bit sets contain multiple bits for creating decorative edges and other features in workpieces. These bits are used in woodworking and light manufacturing applications in a variety of materials, including wood, some metals, plastics, and composites.

Solid Router Bits

Solid router bits make plunge and profile cuts in solid surfaces. The geometry of the router bit helps determine the material it's best suited for use with. These router bits are used in CNC routers, machining centers, and milling machines for manufacturing and production applications.

WIDIA

Carbide Burs

- For long shank burs, see Grainger.com®
- For information on overall length, see Grainger.com®

Single Cut—For general purpose use on steel, cast iron, ferrous, and nonferrous metals.

Double Cut—For use on steel, stainless steel, high-temperature alloys, and cast iron.

Diamond Cut—For fiberglass routing.

Cylinder - No End Cut (SA)

Cylinder - End Cut (SB)

Cylinder - Radius End (SC)

Ball (SD)

Egg/Oval (SE)

Tree - Radius (SF)

Aluma Cut Carbide Burs

These single-end burrs are designed with a high flute finish for easy chip flow in soft materials such as aluminum, plastics, and zinc. Made of micrograin C-2 grade premium carbide with 8% to 10% cobalt content. For use in die grinders, CNC machining centers, and high-speed dremel-type rotary tools.

Note: Additional trade sizes available, go to Grainger.com®.

WALTER VALENITE

Turning Inserts

- Positive rake
- Screw mount
- Priced each, sold in pkg. of 10 only

Note: For additional sizes, go to Grainger.com®.

Power Clamp Shrink Fit Machines

- Compatible with carbide and HSS tools
- 5-second shrink time
- Induction shrink fitting style
- Integrated contact cooling (except 52TV71)

Mini—This single chuck version features standard coil V2008 and interchangeable stop discs. Includes base holder, chuck support, and 3 stop discs.

Special Edition—This single chuck version features standard coil V2008 and interchangeable stop discs. This unit includes cooling manager, base holder, and chuck support.

Comfort NG—Includes intelligent NG coil, rotary table with 3 stations plus chuck support, and cooling manager.

Premium NG—Features intelligent NG coil and integrated drawer. Integrated contacted cooling has 5 cooling bodies fixed to linear guides. Includes cooling manager, 2 precision base holders, and 2 precision chuck supports.

Standard Shrink Fit Chucks

- Balanced to 25,000 rpm

Made of heat-resistant, hot-working steel with a fine-machined surface. Suitable for all kinds of high-speed steel and solid carbide shrink-fit units. Features include high runout accuracy, extreme clamping torque by high pressing in the clamping bore, short camfer, reinforced shank, slimness (marginal interference contour), and rigidity. CAT40 Form ADB means central-coolant supply and coolant channels through the flange can be sealed again. Threaded bores allow for simple and fast balancing with screws.

TECHNIKS BUILT FOR SPEED

CV40 Toolholders

End Mill Holder 40MZ59

These toolholders securely grip and center rotary cutting tools to enable them to make accurate cuts.

End mill holders attach end mills to a milling machine. They grip more securely than a collet to keep end mills from spinning or pulling out during heavy cuts.

Shell mill holders secure shell mills and face mills to a milling machine.

Shrink-fit toolholders use thermal contraction rather than mechanical tightening to get a strong, uniform grip on cutting tools. They provide more gripping force, better balance, and higher concentricity in high-speed machining applications than collets, milling chucks, or hydraulic chucks.

Collet Chuck

- Coolant-Through

Collet chucks connect collets to milling machines, lathes, and other manual and CNC machine tools so that the collets can hold small-diameter tools and workpieces securely on the machine.

TECHNIKS BUILT FOR SPEED

ER Milling and Drilling Collets

042/ER-16 Series

045/ER-16 Series

- Heat-treated for improved flexibility and durability
- Made from high-carbon bearing steel

042 Series—Precision collets feature a collapse range of 0.039" and an average T.I.R. of 0.0002". Can be used with RD, DR, ESX, and BR collet chucks.

045 Series—Steel-sealed precision coolant collets are sealed to 2000 psi with no plugs to fail. They protect the toolholder from contaminants. Can be used with ER, RD, DR, ESX, and BR collet chucks.

Jacobs CHUCK LLAMBRICH USA

Ball and Plain Bearing Drill Chucks

Chuck jaws are center ground for absolute straightness and alignment. Through-hardened sleeve teeth and hardened chuck nose provide superior wear resistance.

Ball Bearing—Engineered for heavy-duty, close tolerance production drilling. Designed to work with a wide range of production drilling equipment, jig borers, milling machines, lathes, and radials. Ball thrust bearings reduce friction and increase grip torque and overall performance.

Plain Bearing—Llambrich USA chucks feature 1-pc. gearing and sleeve to reduce the possibility of broken teeth. Ideal for stationary drilling, turning, milling, and wood working machines. Designed for medium-duty industrial use. Use threaded mounts for hand-held drilling, and tapered mounts for stationary driling machines. Jacobs® chucks were designed for heavy- and medium-duty applications using portable, bench, or floor-mounted power tools.

Stainless Steel—Designed for applications requiring chemical corrosion resistance and/or where there is a potential for hazardous sparking. 1-pc. sleeve design eliminates cracks between drilling teeth. For use with portable or stationary machine tools.

LLAMBRICH USA Jacobs CHUCK

Keyless Chucks

Designed for high accuracy applications on conventional or CNC equipment.

Medium-Duty—Self-tightening feature automatically increases gripping force proportional to increased torque, preventing tool shank slippage in clockwise rotation. Automatic fitting eases quick tool changes.

High Torque—In addition to the features listed for Medium-Duty Chucks, these models have milled wrench flats and spanner, allowing for supplementary gripping torque. Light tightening increases gripping torque up to 3 times over hand tightening. Right-hand rotation and instant spindle stop make chucks resistant to tool loosening on high-speed machines.

High Torque With Shank—Integrated design keeps arbor and drill chuck together. Compact design minimizes accumulated run-out. Precision tested and certified to 0.0016" (0.04 mm) T.I.R. maximum at maximum capacity. For right-hand rotation applications only.

High Precision—Self-tightening feature automatically increases gripping force proportional to increased torque, preventing tool shank slippage. Automatic fitting eases fast tool changes. Precision tested and certified to 0.0016" (0.04 mm) T.I.R. maximum at maximum capacity.

Arbors

Arbors adapt Morse taper to Jacobs® taper; Morse taper to threaded shank; and Bridgeport taper. Precision CNC-machined and ground for high-accuracy performance and close-tolerance fit. Wedge sets are used to remove taper mount chucks from arbors. Also remove Jacobs® tapers Nos. 4 and 5; stack Nos. 3 and 6 wedge sets together.

TE-CO

Clamps

- Black oxide finish

PLAIN

Tapered nose allows clamping in tight spaces.

SERRATED END

Serrated teeth engage into teeth of step blocks for clamping in machining operations.

TAPPED END

For single-point clamping. Tapped hole in end for supporting stud.

NUZZLER EDGE

Adjustable, double-action nose exerts clamping pressure downward and inward, and has serrations for better gripping of non- or semi-finished workpieces. Low grip style provides greater machining clearance.

CLAMP SUPPORT

Includes washer, spring, and shaft collar. Helps prevent clamp from falling when attached to clamp stud.

Flange Nut

Swivel Flange Nut

Spherical Flange Nut Assembly

TE-CO

Flange Nuts

Flange—Case-hardened steel with black oxide finish, or stainless steel.

Swivel Flange—Head rotates while washer remains stationary. Hold rigidly on contact, without marring workpiece.

Spherical Flange—Design compensates for slight misalignment of clamp to workpiece to provide proper clamping force. Assemblies include flange nut and spherical washer.

Fixture Clamps

Cam-action workholding clamps provide fast, strong clamping, and have a low profile design. Simple, 2-component design helps keep maintenance costs low, and the small size allows more parts per load.

Note: Clockwise rotation is recommended. Workpiece stop should be on the right of clamp.

Dovetail Fixtures and Cutters

RAPTOR WORKHOLDING PRODUCTS

▪ For accessories, see Grainger.com®

Made to hold part on 4- and 5-axis CNC machines. Fixtures provide rigid clamping while exposing 5 faces of the workpiece. Spring-loaded clamps require a small amount of material to hold the workpiece. Prepare all parts with a single dovetail and utilize the same fixture for every part.

Vertical and Horizontal Toggle Clamps

These clamps feature maintenance-free, high-quality swivel bushings. They allow for a consistent use of force when opening and closing. Optimum stability is achieved through the conical clamping arm with U-profile. Can be used on a variety of fixtures for applications where hold-down action can replace fasteners. Models with safety interlock include an internal bar lock with automatic safety catch.

Verical Handle—Feature 2 to 3 times the holding force with fewer pinch points for safety and durability.

Horizontal Handle—Provide a low profile for applications where minimum vertical height is required.

Vertical, Horizontal and Compact Toggle Clamps

Feature corrosion-resistant stainless steel rivets and molded grips for safety. Can be used on a variety of fixtures for applications where hold-down action can replace fasteners. Models with Toggle Lock Plus release lever prevent accidental opening due to vibration.

Vertical Handle—Some models feature 2 to 3 times the holding force with fewer pinch points for safety and durability. Flat cushion neoprene spindle.

Horizontal Handle—Provide a low profile for applications where minimum vertical height is required.

Compact Horizontal Handle—Low-silhouette hold-down clamp features a handle that can be operated from either side or from behind.

Positive Locking Pins

Provide a secure way to adjust or remove accessories on equipment. Push button initiates and controls ball action and retraction. Use Lanyards (sold separately) to securely affix pin to fixture or frame.

Kipp®

Cam Levers

Single-Action Cam Levers—For clamping that requires quick adjustment, and where space is limited. For external thread levers, handle rotation is required for fixed stud insertion/removal for mating application. Available in lightweight cast aluminum with powder-coat finish or stainless steel with polished finish.
- Black matte finish
- External threads are fixed into the handle

Adjustable Cam Levers—Used when the position of the tensioning lever relative to the axis of tension only permits one specific position. Cam levers allow this position to be adjusted using a screwdriver. Screwdriver slot in stud allows for fine insertion/removal from mating application; handle rotation not required. Available with black powder-coated cast-aluminum handles or stainless steel handles.
- Adjustable with slotted head

Ball-Style Adjustable Handles

- Black satin finish

Zinc handle, with inserts and internal components in steel or stainless steel. Adjustable from 20 to 45 positions, depending on handle size. Can be adjusted by pulling up on handle to disengage the gear while stud or insert remains stationary.

Note: Additional handles can be found on Grainger.com®; search for "kipp ball-style adjustable handles."

Knobs and Levers

T-KNOBS
For moderate- to heavy-torque applications. Black polypropylene knobs have steel zinc insert and satin finish. Heat-resistant phenolic knobs have brass insert or steel, zinc-plated screw.

3-PRONG
Designed for clamping and quick adjustment. Rounded edges make knobs easy to grasp and turn. Knobs up to 1¾" dia. are 3P style; 2" dia. and up are RT style.

4-PRONG AND 4-LOBE
For high-torque or heavy-duty clamping applications. Soft touch 4-lobe knobs have over-molded rubber layer for comfortable, nonslip grip.

SNAP-LOCK
Molded with a hex hole to accept standard locknuts, hex nuts, hex bolts, and hex cap screws. Fasteners can be easily pushed into position and snapped into the hex hole for a secure fit.

FLUTED
Large flutes and wide hub design for heavy torque applications, clamping, and quick adjustment. Easy to grasp and turn. Knobs up to 1¾" dia. are F2/F4 style; 2" dia. and up are F6 style. Soft touch knobs have over-molded rubber layer for a sure, comfortable grip.

STAR
For high torque applications, with rounded edges for comfortable grip. Impact- and scratch-resistant black polypropylene knobs have steel zinc insert. Knobs with locking thru taps have molded lock nut for vibration resistance. Soft touch knobs have over-molded rubber layer for nonslip grip.

BALL
Multipurpose black knobs with satin finish hide scratches and dirt. Soft touch knobs have over-molded rubber layer for comfortable, nonslip grip.

UNIVERSAL
Self-tapping/threading black polypropylene knobs are vibration resistant. Fit multiple thread sizes. No metal insert.

PULL
Designed for pushing, pulling, and lifting. Black color, impact and scratch resistant.

LONG TAPERED
Designed for heavy-duty applications. Impact and scratch-resistant black polypropylene knobs have steel zinc insert.

KNURLED
Deep, coarse knurls and rounded edges provide sure grip. Impact and scratch resistant, and designed for quick adjustment. For applications where clearance is an issue. ABS thermoplastic knobs are heat resistant to 250°F; nylon to 275°F.

Precision Measuring Information

IP Rating

IP rating indicates the level of protection an instrument offers against water, coolants and fluids, dust, and the elements

IP54-rated tools withstand splashes of water and are safe from particles, debris, and dust.

IP65-rated tools withstand jets of water and provide protection against metalworking fluids, coolants, and dust.

IP66-rated tools are dust-tight and withstand water projected from powerful jets

IP67-rated tools are the best choice for wash-down enviornments or where tools are exposed to seawater, coolants, or cutting fluids.

Resolution—Refers to the smallest visible change in measurment.

Long Form Calibration Certificate—A long-form calibration certificate is issued with insturments that meet standards of accuracy and repeatability set by NIST (National Insitute of Standards and Technology).

SPC Output—An insturment with SPC Output is capable of transmitting measurments via a cabled or wireless connecton to a computer, mini-processor, or other compatible device.

CALIPER TIP TYPES

Carbide-Tipped and Ceramic—Carbide-tipped measuring faces are harder than standard steel. Carbide tips provide more reliable readings, but may chip easier than other materials. Ceramic-tipped jaw faces are wear-resistant, nonmagnetic, and nonconductive.

Carbon Fiber and Plastic—Carbon fiber is used in the construction of long-range calipers. It is lightweight and allows tools to be used across a broad range of measurments. Plastic is nonmagnetic, nonconductive, and typically used in lab applications.

Stainless Steel and Steel—Stainless steel is the most commonly used material in the construction of calipers. It is strong, durable, and rust- and corrosion- resistant. Hardened steel is harder and more wear-resistant than stainless steel.

Plastic Jaw 3YWH2

Stainless Steel 408P47

Dial Calipers

Easier to read than vernier calipers and are commonly used in light and heavy manufacturing, production and machine and woodworking shops.

Vernier Caliper 408P35

Compact Slide 5UAU5

Vernier & Compact Slide Calipers

Vernier calipers take inside and outside measurements. Operators read the main and vernier scales and add the values to determine the reading. **Compact slide calipers** do not have a higher-precision second scale. They are small enough to fit in shop coat pockets. These calipers are commonly graduated with fractions of an inch and often used by woodworkers and for maintenance applications.

Inside Groove 408P10

Inside Point 54GE93

RTJ Ring 408P15

Digital Calipers for Inside Groove and RTJ Groove Diameters

- SPC Output
- 0.005 in/0.01 mm Resolution
- Steel jaw and body
- For SPC processors and accessories see page 2336

Digital calipers for inside groove diameters have specialty jaws that project straight and parallel to each other with outward-facing adjustable contact points for measuring narrow inside grooves. **RTJ (ring-type joint) calipers** have one set of jaws with small, 23° angled contact points that are inserted into RTG grooves to measure outer edge-to-outer edge or inner edge-to-inner edge.

Digital Calipers with Blade, Nib & Pointed Jaws for Small Grooves and Recesses

- 0.005 in/0.01 mm Resolution
- SPC Output
- Stainless Steel body and jaws
- For SPC processors and accessories see page 2336

Blade-jaw calipers with laterally thin blades have carbide-tipped measuring faces for determining outside diameters. **Nib jaws** have a small, squared tip rather than a pointed jaw and are used to measure inside diameters. **Pointed jaws** have very narrow tips that are used for determining outside measurements.

Vernier Scale Outside Micrometer Sets

Vernier scale outside micrometer sets come with multiple mechanical micrometers of the same style across a span of measuring ranges. These micrometers have the same construction, finish, graduations, and thimble type, and increase in 1" or 25mm increments. These sets are commonly used in automotive service and machine shops, tool rooms, and in inspection departments.

Spherical Face Micrometers

- For SPC processors and accessories see page 2336

Spherical face micrometers, also known as round or rounded face micrometers, have a standard outside micrometer body, thimble, and C-shaped jaw. Both contact faces are rounded, and they are commonly used to take measurements of rounded features.

Adjustable-Collar & Interchangeable-Anvil Outside Micrometers

- Ratchet thimble
- Digital Micrometers have cable, wireless w/transmitter data output
- Digital Micrometers have SPC output
- For SPC processors and accessories see page 2336

Interchangeable anvil outside micrometers have a standard micrometer C-shaped jaw and stock, but have anvils that can be changed to accommodate a range of applications.

Digital Indicators

Digital drop indicators, also called electronic indicators, have a linear encoder with an LCD fixed to a plunger-style stem with a contact point on the end. When the contact point touches the workpiece or feature, the up-and-down movement will be translated to a numeric value on the digital display.

Dial Test Indicators and Sets

Dial drop indicators, also called plunger-style dial indicators or dial indicators, have a dial face fixed to a stem with a contact point on the end. When the contact point touches the work-piece or feature, the up-and-down movement of the plunger is amplified on the graduated dial face. The graduations on a balanced-reading dial indicator increase in both directions from the reference point, while those on a continuous-reading dial indicator increase in one direction, typically clockwise. They are commonly used for setup and calibration applications on the shop floor and other applications for measuring and amplifying slight variations. . Back plunger dial indicators are used in appli-cations similar to those of a dial test indicator. Sets include both a dial drop indicator and a holder with a magnetic base.

SPC Components for Precision-Measuring Tools

SPC processors are portable mini printers that print a hard copy of an instrument's measurement data. Foot switches allow hands-free transmission of measurements. **Wireless SPC data transfer components** are used to record and transmit data to a computer without cords or cables. **Wireless transmitters** are small units that plug into precision measuring tools with SPC output capability.

Digital Height Gauges

- Includes display
- 2D Digital Height Gauges include SCS Certificate of calibration
- SPC Output except where noted

1D digital height gauges are used measure height and scribe lines for layout applications.

2D digital height gauges have a scriber that moves along the X axis so the operator can perform measurements in 2 dimensions. They measure height and inspect round parts and bores, with the probe moving in a circular path. They are also used to scribe lines in layout applications.

Bore Gauges

Dial Bore Gauges are mounted to the gauge handle. The user rocks the gauge in the bore or hole to find the minimum reading on the dial. **Digital bore gauges** have a integrated LCD or removable and exchangeable digital indicator that provides quick, easy reading of inside-diameter measurements of holes and openings.

Telescoping Gauge Sets

Inserted into openings and controlled by a knurled knob or small handle that expands the telescoping arm until the spring-loaded plungers make contact with the sides of the bore. Polished-steel gauge is locked into place and removed. It is then measured with an outside micrometer to determine a bore's hole diameter.

Feeler Gauges and Sets

Long Blade
3R019

Set
463T14

- Individual feeler gauges have a ½" blade width

Steel feeler gauge sets measure gap widths by inserting the gauge into a gap. They can also be used as high-precision, durable shims. They are commonly used by engineers, machinists, and in light and heavy production, automotive, and woodworking applications.

Pin Gauges

Class X Go (Plus)

- Class X have 0.0001 in. diameter increment, Class ZZ 0.0005 in.
- Class X have a 0.00004 in. tolerance, Class ZZ 0.0005 in.
- Class X diameter ranges from 0.0040 to 1.0000 in. available on Grainger.com
- Class ZZ diameter ranges from 0.0110 to 1.0005 in. available on Grainger.com

Class X No-Go (Minus) pin gauges are unthreaded smooth rods of tool steel used to perform No-Go (Minus) tolerance tests on bores and holes. If the No-Go gauge does not fit into the hole or bore, then the hole is within the acceptable tolerance for the maximum acceptable size. They are also used to calibrate measuring equipment. These gauges are 2" long and come with a short-form certificate of accuracy stating they are traceable to NIST. **Class ZZ** gauges are for general purpose use and come unfinished or with black oxide coating to indicate signs of wear. They are also used to calibrate measuring equipment and come with a short-form certificate of accuracy that confirms they are within specs traceable to NIST.

Black Oxide Set 5VUD8

Black Oxide Library 5MAU4

Vermont Gage Starrett®

Pin Gauge Set & Libraries

- ZZ Tolerance class
- 0.001 in/0.02 mm Diameter increment

Go (Plus) pin gauge sets contain 240 pin gauges in a sturdy case, each with a marked slot in an insert. Gauges are used to confirm that a hole's diameter meets the minimum spec size. Each pin is a 2"-long rod of tool steel with a black-oxide coating that shows signs of wear so users know when the gauge may need to be replaced. These gauges offer mild resistance and wear recognition, with a surface finish of 10 micro inches or better.

Radius Gauge Sets

Fixed Leaves with Handle 463N63

These radius gauge sets contain various-sized loose leaves or multiple leaves that are mounted to one or more hubs on a handle. They are used to quickly check or inspect the size of the radius or fillet, confirming a known size or determining an unknown one. They are also used as a stencil on a workpiece in combination with a scriber and layout die to mark a radius that needs to be cut. These gauges are commonly used in woodworking and light and heavy manufacturing applications.

Shaft Alignment Tools

4CEV9

Shaft alignment tools check alignment of motor bearings and shafts without having to dismantle the engine or check alignment in hard-to-reach areas. Sets typically pair a roller-chain clamp with an extension clamp and posts, or include one or two clamps with accessories and dial indicators in a hard case.

Includes	Dial Gauge Range	Dial Reading	Graduations	Item No.

Precision Steel Parallels & Sets

These precision steel parallel sets are comprised of rectangular blocks with highly parallel, square dimensions within tight tolerances. When a vise is too deep to hold a workpiece, parallels are commonly used to position the workpiece for accurate cutting by creating a parallel and flat base. These parallels offer certainty about the alignment of the workpiece rather than requiring guesswork and constant adjustments with a level, protractor, or indicator.

Single-Function Digital Scale Units with SPC Output

Linear scales with SPC output move along a beam and display the distance traveled on a digital display. They are available in horizontal or vertical designs to measure distances. They measure absolute positioning, zero-setting for relative positioning, and have built-in low battery alarms. The also have direction changeover to reverse the direction of measurement, programmable presets to display a specific value, and data hold. They are commonly used for table positioning, quill positioning, and tool presetting.

Inspection Surface Plates

Grade B Toolroom Grade surface plates are made to a precise tolerance of flatness and repeatability suitable for smaller QA and inspection jobs on the shop floor where metrology lab-level sensitivity is not a factor. **Grade A Inspection Grade** surface plates are built to a medium tolerance of flatness and repeatability. They have either four flat edges or ledges on two sides that create an overhang for clamping, supporting, and securing objects. **Grade AA Laboratory Grade** surface plates are made to the best tolerance of flatness and repeatability. These plates are thicker than lesser-grade plates, so they have less deflection and are intended for permanent installation.

Handheld Surface Roughness Testers with On-Board Probe & Display

Built with an on-board probe and digital display, the entire unit can be placed directly on the surface of a feature or workpiece. The retractable probe extends from the body in multiple orientations. They have a simple digital display that can cycle through standard measurements such as Ra and Rz of a surface.

Handheld Durometers

Mechanical 1ARV2

Digital 463T24

Shore A durometers can measure more flexible materials, such as the rubbers used to make hydraulic O rings and automotive tire treads. Shore D durometers can measure harder materials, such as those used to make hard hats and solid truck tires. **Analog durometers** have peak-retaining hand functions that help provide error-free readings. **Digital durometers** have a data-hold function that can retain readings on the LCD or allow them to be downloaded to a computer.

Shore A 1ARU7

Mitutoyo Starrett®

Durometer Calibration Sets

Rubber durometer test blocks help you to test the operational status of your Shore A or Shore D durometer. Choose a Shore A test block kit to yield hardness values of averaged ranges of 30, 60 and 90. Use a Shore D test block kit to find hardness values in the average ranges of 20, 40 and 80. A set of three rubber test blocks for testing type A hardness values of 27 to 94 includes a certificate.

Milling and Mill/ Drill Machines

MILLING

Step Pulley—Use belts to manually change speeds. For more information, see Grainger.com®.

Variable Speed—JET models have handwheel adjustment to set speed and internally cooled spindle head. For more information, see Grainger.com®.

CNC Vertical—Feature 3-stage power downfeed with automatic stop, internally cooled spindle head and heavy-duty spindle brake. ACU-RITE MILLPWR® CNC 2- or 3-axis control.

MILL/DRILL MACHINES

Provide accurate milling, drilling, and boring capabilities. Sharp models have a 10" to 20" lathe capacity.

Benchtop and Floor Stand Drill Presses for Metal

These stationary drilling machines typically spin bits at low speeds with high torque. They maintain consistent alignment to create more accurate holes than handheld drills. Models with geared head drive eliminate belt slippage and the need to replace belts in belt drive drill presses.

Benchtop Drill Presses with Manual Downfeed—Mount to a work surface to save floor space and are more compact with a shorter spindle travel than floor-stand drill presses. They require hand-cranking to lower the bit so it can drill holes in metal workpieces.

Floor Stand Drill Presses with Manual Downfeed—Provide a long spindle travel to drill through thicker metal workpieces and create larger-diameter holes than benchtop drill presses. They require hand-cranking to lower the bit so it can drill holes in metal workpieces.

Floor Stand Drill Presses with Power Downfeed—The downfeed automatically lowers the drilling head at a smooth, consistent rate to drill holes. Models can drill more uniform holes than manual-downfeed presses.

Benchtop and Floor Stand Radial Drill Presses for Metal

Radial drill presses mount their drilling head on an arm that extends from the support column and allows vertical and horizontal positioning of the head. The drilling head moves up and down with the arm, and it can slide along the length of the arm to accommodate wide workpieces. They maintain consistent alignment to create more accurate holes than handheld drills. Models with a geared head drive eliminate belt slippage and the need to replace belts in belt drive drill presses.

Benchtop Radial Drill Presses with Manual Downfeed—Create holes in thinner workpieces and mount to work surfaces to save floor space. They are more compact with a shorter spindle travel than floor-stand drill presses, and their manual downfeed requires hand-cranking to lower the drill bit into workpieces.

Floor Stand Radial Drill Presses with Manual Downfeed—Have a long spindle travel to drill through thicker metal workpieces and create larger-diameter holes than benchtop drill presses. Their manual downfeed requires hand-cranking to lower the drill bit into workpieces.

Floor Stand Radial Drill Presses with Power Downfeed—Provide a long spindle travel to drill through thicker metal workpieces and create larger-diameter holes than benchtop drill presses. Their power downfeed automatically lowers the drilling head at a smooth, consistent rate to drill more uniform and accurate holes than manual-downfeed presses.

Benchtop and Floor Stand Drill Presses for Wood

Drilling machines are stationary and normally spin bits at high speeds with low torque. They support work on the table below the drill head and maintain consistent alignment to create more accurate holes than handheld drills. Models with a direct drive eliminate belt slippage and the need to replace belts in belt drive drill presses.

Benchtop Drill Presses for Wood—Create holes in thinner wood workpieces and mount to a work surface to save floor space. They are more compact with a shorter spindle travel than floor-stand drill presses, and their manual downfeed requires hand-cranking to lower the drill bit into workpieces. The motor uses belt-driven pulleys to transmit torque to the drilling spindle.

Floor Stand Drill Presses for Wood—Provide long spindle travel to drill through thicker wood workpieces and make larger-diameter holes than benchtop drill presses. Their manual downfeed requires hand-cranking to lower the drill bit into workpieces, and their motor uses belt-driven pulleys to transmit torque to the drilling spindle.

How to Select a Live Center

1. Determine machine's taper.
2. Determine the weight of the workpiece, while taking cutting forces into consideration. Weight of workpiece noted next to each item is the maximum weight the live center can safely carry.
3. Determine required operating speed.
4. Determine point style that best suits application. Standard points are best when rigidity and weight requirements are most important. Longer points offer maximum tool clearance when needed.

Dual-Bearing Bull Head 41LK14

Quad-Bearing CNC Carbide Point 41LJ99

Tri-Bearing Design CNC Point 41LJ92

Dead Center 41LJ59

Live & Dead Centers

Bull Head Point centers are shorter than pipe heads, reducing interference in blind center hole applications and ensuring that the load is positioned over the bearings. Tri-Bearing design enables both high rpms and good load ratings. Quad-Bearing centers (and 41LJ90) feature Royal Roto-Shield™ technology with a live center point machined from a solid bar incorporating a specially-shaped steel coolant slinger.

Mitering 2LKT4

Non-Mitering 446N83

Manual Horizontal Band Saws

Cut metal, pipe, channel, and conduit. **Mitering band saws** have a pivoting head to make mitered cuts in addition to straight cuts. **Non-mitering band saws** make straight downward cuts. They provide better precision and repeatability when making straight cuts than mitering saws that have a pivoting head.

Semi-Automatic Horizontal Band Saws

A tool head on these saws automatically cuts metal after the operator manually positions and clamps the workpiece in place. Semi-automatic saws help prevent fatigue and speed operations when the same cut is made repeatedly. These saws are used in small production facilities where similar materials are cut and settings don't need to be changed regularly.

Automatic Horizontal Band Saws

- 3-phase

Programmable, automatic saws feed and cut material based on settings determined by the operator. This speeds processing and helps alleviate operator fatigue. Automatic band saws are used in production applications when cuts are repeated.

Combination Vertical/Horizontal Band Saws

- Single phase

A pivoting head allows these saws to cut metal vertically or horizontally. **Manual** band saws are manually operated in both the vertical and horizontal position. In the vertical position, the operator pushes the material through the blade. In the horizontal position, the operator lowers the saw head to make the cut. **Semi-automatic** saws are manually operated in the vertical position and semi-automatic in the horizontal position. In the vertical position, the operator pushes the workpiece through the blade. In the horizontal position, the workpiece is clamped to a table and the saw is programmed to lower the cutting head to complete the cut.

Vertical Metal-Cutting Band Saws

Manual saws have a table that supports the workpiece while the operator pushes it through the blade to make the cut. **Semi-automatic** saws are programmed by the operator to cut the material after the operator clamps the workpiece in place. The head moves through the workpiece as it rests on a stationary table.

Starrett® LENOX

Narrow Band Saw Blades

- Bimetal tipped

Blade widths up to ½" leave the blade flexible to make curved cuts. The ends of these metal-cutting blades are welded to form a continuous loop with a single cutting edge that cuts as the blade rotates through the workpiece. Blade material, tooth, and geometry are optimized for specific metals.

Wide Band Saw Blades

For Structural Shapes
5XHD7

- Bimetal tipped

Blade widths of 1 ¼" or more for extended use in large band saws for production and manufacturing tasks. **General purpose blades** cut mild steel, stainless steel, aluminum, and softer metals such as brass. They are common on production lines and fabrication operations where a variety of materials are cut so blades don't have to be changed between cuts. **Structural shape blades** cut steel profiles such as tube and I-beams where the blade passes through different thicknesses of material in a single pass.

Wood-Cutting Band Saw Blades

- Carbon steel tipped

For use in vertical band saws that operate at higher speeds required for cutting wood. **Flex-back blades** absorb shock at high speeds to resist fatigue better than hard back blades. They are best suited for cutting soft wood and making curved cuts. **Hard-back blades** make straight cuts and are used when high force or pressure is applied to the blade as material moves past the blade, such as when cutting hard wood, mild metal, and large workpieces. They are usually used at slower speeds than flexible back blades.

Band Saw Blades for Ceramic, Composites & Cast Iron

Abrasive grit cuts through hard and brittle materials including ceramic, composite materials, and cast iron. **Continuous-edge** carbide-grit band saw blades have carbide grit on the entire length of the blade. They leave a fine edge on stone, glass, and thin, brittle material. **Gulleted-edge** blades have grit on the cutting teeth and semicircular gaps between the teeth to cut thick material, cast iron, and composite materials.

Band Saw Blades for Cutting Meat and Frozen Food

- Bimetal tip

Food-safe blades cut meat, fish, and produce in large- and small-scale food processing and butchery applications. **Hook-tooth** blades cut frozen foods and bone-in meat. **Scalloped-tooth** blades have a serrated edge for cutting soft foodstuffs like cheese, vegetables, and fresh meat. They also cut through soft, non-food materials such as foam, paper, and rubber.

Roller Head Stands

Chrome-plated steel rollers with double-sealed ball bearings. Mounting holes in base. Horizontal and "V" heads are interchangeable on common base.

"V" Roller Head—Used to support bar stock, pipe, tube, conduit, or other round material. Two 2" x 5" rollers accommodate material from 1" to 18" in diameter.

Horizontal Roller Head—Used to support bar stock, sheet metal, beams, or other flat material. Single 2" x 14" roller protrudes above the head casting, allowing use with material wider than the roller.

Ironworkers

Generate high-pressure hydraulic force to perform different metal-forming actions such as punching, shearing, forming, bending, pressing, and notching on thick plate metal, angles, and bars. They have separate tooling stations for each function and accept compatible add-on stations for additional functions. **Hydraulic Ironworkers** have a hydraulic pump to drive different metal-forming actions. **Ironworkers with External Hydraulic Power Output** use a hydraulic pump to drive different metal-forming actions and an external output to power other compatible hydraulic tools. They eliminate the need for a separate hydraulic power unit to run additional tools such as benders, rollers, and presses.

Box and Pan Brakes

Have a segmented, top beam that can fabricate multiple bends in sheet metal workpieces and form boxes, trays, and pans. **Manual Box and Pan Brakes** need manual effort to clamp the top beam and lift the folding bar to make bends in sheet metal. They are commonly used in areas or on jobsites without access to power. **Hydraulic Box and Pan Brakes** have hydraulic cylinders to apply force to clamp the top beam and lift the folding bar to make more controlled bends with less effort than manual brakes. They are used for longer bends and thicker materials than manual brakes.

Plate and Slip Rollers

Machines feed sheet metal or metal plates between their long, cylindrical rollers to form flat workpieces into rolls. They produce slight curves or tight rolls depending on the roller positioning, **Electric Plate Rollers** can roll thinner plates than most hydraulic models, while **Hydraulic Plate Rollers** can roll thicker plates than most electric models. **Manual Slip Rollers** have a hand crank to create curves and form rolls in sheet metal.

Bead Rollers

Machine tools pass sheet metal between two rolling dies to form ridges, steps, and other profile shapes. Bead rollers accept compatible forming dies to change profile shapes and create offsets or flanges. **Electric Bead Rollers** can produce more uniform beading and bead heavier-gauge sheet metal than manual models. **Manual Bead Rollers** have a hand crank to turn their dies and add beads to sheet metal. Models can bead lighter-gauge sheet metal than electric models.

Straight Machining Shears

Tools drive their cutting blades through sheet metal to leave a clean, straight-edged cut. They hold the sheets on their table between the blades or dies, which press down to make the cut.

Air-Powered Machining Shears—Run cooler and typically have a long life compared to electric and hydraulic shears. Shears cut heavier-gauge sheet metal with less effort than manual models.

Foot Pedal Machining Shears—Have a pedal that operators press down to engage the cutting blades. They leave both hands free to position and hold the sheet metal.

Hydraulic Machining Shears—Use hydraulic power to operate their cutting blades. They make clean cuts with great force to speed production.

Rotary and Straight Blade Bench Shears

Manual shears use their cutting blades to slice through sheet metal and are worktable mountable. Their throatless design allows long cuts along the edges of materials

Rotary Blade Bench Shears—Roll sheet metal between their cutting wheels to make straight, curved, and irregular cuts.Shears are commonly used to make rounded and intricate cuts to shape workpieces.

Straight Blade Bench Shears— Make straight cuts by pressing their blades through metal sheets, thin plates, tubes, and bar stock.

Shrinker Stretchers

Compress sheet metal to form inside curves or expand it to form outside curves. Their jaws clamp onto material and either pull it together to shrink it or push it apart to stretch it. Stretchers are typically used to curve workpieces that already have a right-angle bend, especially when forming patch panels for door frames, windshield channels, trunk gutters, and other automotive and framing applications.

Foot Pedal Shrinker Stretchers—Pedal is pressed down to engage the jaws and add a curve to workpieces while both hands are free to position and hold the material. They can shape heavier-gauge sheet metal than hand-operated models but lighter gauges than hydraulic units.

Hand-Operated Shrinker Stretchers—Hand lever manually engages the jaws and adds a curve to workpieces. They shape lighter-gauge materials than foot pedal and hydraulic models.

Hydraulic Shrinker Stretchers—Deliver a powerful downstroke for greater forming force than manual machines. Tools shape heavier-gauge sheet metal than manual models and reset more quickly between strokes to speed production.

Sheet Metal Punches

Used to cut clean, accurate holes in flat metal sheets and plates. They hold workpieces in the throat of the tool and drive a punch through the material and into a die to create a hole. Punches accept different punch and die sets to make holes of the desired shape and size and are commonly used to punch holes in automotive panels and manufacturing components.

Manual Sheet Metal Punches—Hand lever drives the punch as it cuts holes in light-gauge sheet metal and plates.

22 ga	1 ⅛ in	⅛ in Punch and Die, 3/16 in Punch and Die	Yes	**5KNV3**

Sheet Metal Notchers

- 90° notch angle except 29CK41 is 180°

Carve out rectangles, triangles, and other shapes along the edges of flat metal sheets. Their cutting blades or dies shear through workpieces to make clean cuts and are commonly used to remove the corners of sheets and leave flaps that can be folded in to form trays, pans, and boxes.

Air-Powered Sheet Metal Notchers—Have fewer moving parts, weigh less, run cooler, and have long life compared to electric notchers. They cut heavier-gauge sheet metal with less effort than manual notchers.

Corded Sheet Metal Notchers—Electric motor operates their cutting blades to cut heavier-gauge sheet metal with less effort than manual notchers.

Manual Sheet Metal Notchers—12G601 has a foot pedal and 13W870 has a hand lever to engage their cutting blades. The lower blade can be reversed and sharpened for long life. Their triangular ram controls cutting head alignment to make accurate cuts in box, chassis, and panel blanks. They can notch lighter-gauge sheet metal compared to corded and air-powered models.

English Wheels

Form curves and contours on sheet metal as the metal rolls back and forth between two anvil wheel dies. The user can adjust the wheel pressure and move workpieces along the wheels by hand as the wheel dies press against the metal to slowly stretch and round it. Tools can accept dies with different contours to get the desired curve on the workpiece. Suitable for shaping metal for tanks, fenders, and other domed parts.

Powered Planishing Hammers

Air-Powered 18F219

Electric 31XV19

Variable speed tools shape and smooth sheet metal workpieces by striking them with forming dies. They hold material between two dies and repeatedly strike the top die (hammer) against the bottom die, and can accept die sets of various sizes and shapes to form metal to the desired surface profile. They are commonly used to shape, and finish domed workpieces and to remove dents or wrinkles from damaged workpieces.

Air-Powered Planishing Hammers—Operate on compressed air and generally strike faster, contain fewer moving parts, run cooler, and have long life compared to electric models.

Electric Planishing Hammers—Corded units can operate in locations where a compressed air supply is not available.

Arbor Presses

Note: Pneumatic and Compound Arbor Presses are available on Grainger.com®.

Standard—Dayton® models provide heavy pressure, and feature a machined table with a slotted, removable, 4-position revolving anvil. JET model has precision-machined base, ram housing, framework, and 4-position bottom plate. Dake® single-leverage press has a shimmed ram cap and adjustable handle.

Ratcheting—Use for consistent application of force when needed for broaching or pressing large items. Ratchet device lets the lever be used in the most convenient position. Has counterweight for rapid handle return and quick ram advance via the side-mounted handwheel. Rotating table has 4 slots.

H Frame Hydraulic Presses

For pressing, bending, and straightening operations.

Manual—Dake models feature a single-speed hand pump, and a large dia. single-acting polished piston with a top-mounted gauge. Cylinder can be relocated to the right or left. Table is adjustable. JET® hand-operated presses have pressure gauge for direct pressure readings. Hand crank raises and lowers table, and ram moves laterally.

Electric—Dake® models feature lever control ram advance and a double-acting cylinder. 1-hand ram positioning with 4-way valve hydraulic control. Edwards® presses have rolling cylinder for maximum adaptability, while open-sided design allows longer material to pass through the frame. Electric foot pedal has integrated jog control. Includes hydraulic-assist adjustable worktable height, pressure gauge, and 20-ft. quick-connect hoses. 454R58 and 454R60 offer adjustable up/down stroke control. Adjustable PSI allows the user to set the desired pressure accurately.

Air—Feature industrial-grade hydraulic components, fully-welded solid steel frames, and V-block set. 31XV11 has adjustable table and includes pressure regulator and gauge. Made of rigid, electro-welded steel. 31XV13 has foot pedal and manual hand pump to lift and lower the working table.

Belt Grinders

- For replacement belts see Grainger.com®

Baileigh—31XU09 and 31XU10 can accommodate large and uncommon-shaped parts. 31XU08 includes 3 quickly interchangeable grinding tables. 31XU11 has a triangular base to let you pivot the unit to the desired angle. 31XU12 opens to provide a flat grinding position. Vacuum motor extracts and collects metal dust.

Dake®—Advanced belt tracking includes a fixed, vented front wheel for grinding on the wheel radius. Pivots up and down for work height adjustments. Hinged top cover lets you grind large pieces using the entire length of the belt.

Fein—Modular expandable grinders provide rapid material removal and feature an adjustable base and belt tracking system; ideal for metal machining. Detachable chip collection allows easy clean up. Include stand, belt grinder, and 36 grit grinding belt.

JET®—53ZC60 to 53ZC63 feature cast metal frame, integrated dust chute, and quick belt change. 3WRN4 features flat platen; ideal for grinding and refinishing cylindrical shapes. The serrated contact wheel can be used for removing heavy stock, cleaning a weld, or snagging a casting. 3WRR3 and 42W965 tilt 45° out and 20° in. They feature variable-position locks and head adjustment, plain and compound miters, adjustable cast-iron removable platen, and removable upper guard. Include miter gauge and stand. 42W958 and 42W959 pivot up and down; a hinged top cover lets you grind large pieces. Advanced belt tracking has fixed, vented front wheel.

Belt/Disc Sanders

Dayton®—Adjustable belt for vertical and horizontal positioning. Include front-mounted On/Off switch and built-in dust collection ports. 6Y945 bench model is direct drive from motor to disc and belt. Includes miter gauge and dust collection port. Floor Models include a quick-release tension mechanism for fast, easy belt changes. Come with tilting table and miter gauge. 49G990 includes an open floor stand.

JET®—42W960 has a deluxe miter gauge that turns and locks for common angles, 45° both left and right. Abrasive belt unit works like a jigsaw, coping saw, and hand file while removing material and finishing. 42W970 has preset stops at 90° and 45° for vertical or horizontal use. Dual thumbscrew belt tracking locks. Floor model 3WRP6 has 2 tilting tables for mitering applications and quick release belt tension mechanism. 3WRR2, 42W962 and 42W963 have a belt that operates at any angle and conforms to curves, angles, or circular finishing and grinding operations. Plain and compound miters are obtained using standard aluminum miter gauge.

Powermatic®—Belt head has an indexing pin with stops at 0°, 45°, and 90°, and a head lock that allows use at any angle in between. Cast-iron table has miter gauge slots and positive stops. Integral dual dust port.

Surface Grinders

- Noncoolant fed
- 220V, 60 Hz
- 3-phase

All units include grinding wheel, auto lube system, wheel adapter/ flange, wheel balancing arbor, work light, and diamond dresser.

Manual 446P01—One V and one flat way for longitudinal travel for high precision grinding. Provides accurate slot grinding by using saddle locking system. Wire rope movement with double-nut backlash eliminator. Spindle runout accuracy of 0.0001". Working surface is 6" x 18.3".

Automatic 446P09 to 446P14—Ensure accurate alignment of longitudinal and cross movement with one-piece T-base casting. Provides automatic crossfeed with intermittent and continuous mode.

Automatic 446P06 to 446P08—Constructed with two V longitudinal ways and two cross V ways, ensuring accurate alignment between working surfaces.

Mechanical valve controls the motion of table, minimizing vibration when table reaches on end and reverses back.

Automatic 446P02, 446P03, and 446P04—Have double V ways for cross travel (one V and one flat for longitudinal travel), providing automatic table and cross feed. Saddle locking system provides accurate slot grinding. Hydraulic system with oil tank prevents table from vibrating. Working surface from 6” x 18.3” to 8” x 20”. 446P04 has a touch screen NC downfeed control.

OD Grinders

- Distance between center: 27 -1/2"
- Infeed range: 0 to 10"
- Max. Grinding dia.: 10"
- Max. Load between centers: 180 lb.
- Spindle rpm: 10,000
- 3-phase, 220V, 60 Hz

Can grind up to 12” outside dia. And 24”, 40”, 60”, and 80” length work. Equipped with manual operated wheelhead infeed, and hydraulic table feed. Electronic control workhead can be swivel by 90° for CCW and CW grinding operations. Table travels on cushion of oil with no metal-to-metal contact. Automatic lubrication system with dual oil cover, prevents coolant from entering into workhead.

446P15 and 446P6 feature variable speed drive.

446P17 wheelhead feed is manually-operated.

466P18 has auto head infeed.

Sanders

DISC

Use for deburring, chamfering, grinding, and finishing large workpieces.

OSCILLATING SPINDLE

Features 1" oscillating action to reduce friction heat, built-in 2" dust port, and 4 nonskid rubber feet. Tilts to 45°.

OSCILLATING BELT

For edge, face, bevel, and contour applications. Oscillating feature reduces heat build-up. Quick-release lever and control dial help track and replace belts. Cast-iron table moves up or down.

DRUM

Patented conveyor belt TRACKERS™ reduce the need for manual belt adjustments.

CNC Router Tables

BAILEIGH INDUSTRIAL

445L77 comes with software, tooling, and a dust shroud. Cast-iron base, fully assembled. Ideal for sign makers and molding companies. Upload designs using a USB drive, and move the spindle with the handheld controller. Features ball screw X and Y axis movement for accurate positioning, square slideways for clamping, 4 collets, 15 starter router profiles, air-cooled spindle, and 4 T-slotted clamps to hold material for clean cuts. 445L78 and 445L79 automatically change tooling in 8 seconds. Prebuilt tables come with software, air-cooled spindle, and servo motors. Preload up to 4 collets. Include dust shroud and fully welded steel frame.

42W822

Dust Collectors

Dayton | JET | POWERMATIC

Not suitable for aluminum or other reactive dust, or for hot metal dust.

Single-Stage Portable—Dayton 115/230V units include PVC inlet hose and clamps. 3AA30 has a pick-up nozzle. 1RWB3 and 3AA28 have bag support assembly and built-in wheels. JET units include quick-connect collection bags and 4 casters. 42W940 features Vortex Cone to improve chip separation and prevent filter from clogging. Powermatic unit has efficient canister filter and triple 4" dust ports. TurboCone feature improves chip separation and prevents filter clogging.

2-Stage Portable—Include 5-ft. wire-reinforced PVC inlet hose and clamps, and 5-micron dust collection bag. Drum not included.

2-Stage Central—Conical blower housing induces a cyclone to effectively separate heavy and light particles; heavier particles drop into the drum and lighter particles are captured in the dust filter bag. Include fiber-glass drum lid with hose and clamps, 5 micron dust collection bag, 230V motor starter, and all hardware required for assembly.

5-HP models support 1 drum and 1 dust bag; larger models support 2 drums and 2 dust bags. Drum not included.

Dust Collector for Metal—Uses Replacement Filters 42W951, sold below.

Safety Shields and Enclosures

Westward Safety Shields—Feature quick cam action and 360° swivel locking shield.

Ferndale—45HE37 is for milling machines and has 3 interlocking safety switches. Fitted to an articulated arm, balanced, and kept in position by a gas spring`with steel pipe and polycarbonate hood. 45HE42 is for grinders and includes clutch and easy-to-fit swiveling mounting bracket. Designed with aluminum frame and 130 x 130mm polycarbonate screen. 45HE60 is a polycarbonate safety screen with lathe safety guard that can be tensioned to stay mid-way up. For use with chuck size up to 11" dia.

3D PRINTERS

3D40 FLEX - Flexible metal build plate allows easy, safe removal of printed objects. Improved 50 micron ultra high quality print resolution is ideal for intricate, detailed designs. Prints up to 30% faster than low resolution using draft mode printing profile; perfect for classroom settings. Easy set up using touchscreen control.

3D45 - High quality printer for creating complex models and prototypes using advanced filament types at higher temperatures. RFID recognition automatically detects filament type and adjusts printer settings. Heated bed prevents warping. Enclosed build area has cooling and filtration systems to keep temperature consistent and protect from dust. WiFi and integrated HD camera allow remote printing and monitoring.

Sanding Belt Selection Guide

	Size Range	Application
File Belts	⅛ to 1" W, 12 to 30" L	Light weld removal and blending, shape and contour sanding, surface preparation prior to coating and plating, removing cutting tool marks from molds and dies, general clean-up and finishing
Portable Belts	3 to 4" W, 15½ to 24" L	Grinding and finishing all metals, blending welds, sanding and finishing wood, glass seaming, and polishing
	1 to 10" W, 36 to 132" L	Benchstand and backstand belts, grinding and deburring of all metals, heavy stock removal, blending, dimensioning and shaping, polishing

GRIT SELECTION GUIDE

Grit Size	Application
36 to 50	Stock Removal
60 to 100	Intermediate
120 to 320	Finishing

GRAIN SELECTION GUIDE

Abrasive Grain	Application
Ceramic - High Performance	High cut rate and long life on stainless, aluminum and other hard-to-grind metals
Zirconia Alumina - Heavy-Duty	High rate of stock removal and long life in demanding applications
Aluminum Oxide - General Purpose	General purpose metalworking applications

TROUBLESHOOTING GUIDE

Problem	Correction
Loading	Decrease infeed pressure or belt spread
Shedding	Reduce applied pressure Use less aggressive contact wheel Dress contact wheel if worn or damaged Use entire surface of belt
Belt Breakage	Reduce belt tension Use less aggressive contact wheel Check tracking mechanism for belts tracking erratically

More sizes and styles available online; for our complete selection go to grainger.com/sandingbelts

Choose the Right Abrasive for Your Application

General Purpose—The most affordable option uses Aluminum Oxide grit.

Heavy Duty—Zirconia grit provides a faster cut rate and longer life compared to Aluminum Oxide. An excellent combination of quality and price.

High Performance—Ceramic grit provides the best combination of service life and cut rate, for consistent performance over the entire product life. Your best choice for production applications.

Non-Woven Abrasive Rolls

Scotch-Brite™

An economical alternative to pre-cut pads for effectively hand cleaning male and female threading, and inside of cylinders; cut to size and use only what you need. The flexible, nonloading, nonrusting material conforms to work surfaces for light- to heavy-duty cleaning, deburring, blending, polishing, and finishing. Use on metal, wood, composite, plastics, stone, solid surfaces, and painted surfaces.

Abrasive Cloth Roll Kit

Kit comes with 24-ft. L premium aluminum oxide abrasive sheets in 5 different grits; cut or tear off to the length that you need to help eliminate waste. The strong bonding system allows the sheets to be torn and rolled without shelling. An excellent choice for all your utility sanding and general maintenance work, including blending, finishing, and cleaning applications.

NORTON SAINT-GOBAIN

Open-Mesh Abrasive Rolls and Sheets

In applications where life and load resistance are the most-important factors, the open mesh screen on these silicon carbide sheets resists loading for fast, easy, and efficient sanding. Use for sanding plastic piping prior to gluing; preparing copper pipe and fittings prior to soldering; and sanding softer materials where loading is a problem, such as plaster, wood, drywall, brass, etc.

Diamond Hand Pads

NORTON SAINT-GOBAIN

Color-coded hand pads combine the durability and aggressiveness of diamond on a high-strength, flexible backing. Single-sided; conform to shapes and contours. Well-suited for quick finishing of ceramic tile to get a smooth edge before grouting. Can be used on many other surfaces to smooth edge chips, reface edges, or polish dies and molds. 1RDJ5 is an assortment that contains 1 of each type of pad.

Abrasive Sponges

NORTON SAINT-GOBAIN 3M

Durable coated foam lasts up to 5 times longer than sandpaper and resists tearing. Can be used wet or dry, and can be washed and reused multiple times.

General Purpose—Small, flexible sponges are coated on 2 sides and can be used on most materials. Silicon carbide abrasive.

Sealer Sanding—Designed for hand sanding primers and sealers between coats on furniture and cabinets. Premium silicon carbide abrasive. Coated on 2 sides.

Profile—Designed for flat surfaces and corners on metal, wood, plastic, or paint. Aluminum oxide abrasive. Coated on 3 sides.

Small Area—The ultra sharp aluminum oxide grain offers faster cut and longer life for small area paint and drywall repair. Coated on 2 sides.

Dual-Angle and Angled—Extra-firm sponges are coated with aluminum oxide abrasive on 4 sides for sanding inside corners and crevices of drywall compound.

Contour—Thin, flexible sponges are designed for small diameter objects with contours such as ceramics, spindles, turnings, and railings. Aluminum oxide abrasive. Coated on 1 side.

Soft Touch—Superior flexibility for hand sanding or finishing flat, curved, contoured, and hard-to-reach areas. Aluminum oxide abrasive. Coated on 1 side.

Corner Drywall—2 sides have aluminum oxide abrasive, providing dual sanding action for near-perfect inside corners on drywall. Extra-firm sponges are designed for sanding drywall corners, but can also be used on a variety of other materials.

Softback—Coated on one side with an aluminum oxide grit that is excellent for automotive applications, this flexible sponge is effective for hard-to-reach areas like headlight openings and door jambs. The soft foam backing allows comfortable hand sanding.

Foam Sanding Pads

NORTON SAINT-GOBAIN

- A275 aluminum oxide grain with No-Fil® coating
- 4½"W x 82'L roll
- 178 (5½"L) sheets per roll

Water-resistant sheets are excellent for fine sanding water-based primers, topcoats, wood, metal and composite, especially on rounded edges, contours, and curves. Can be used moist to provide a uniform finish that minimizes scratching.

Sanding Disc Specifications

Series	Application	Backing	Abrasive
Norton A275	Faster cut rate than standard discs. Flexible backing. Available with vacuum holes to pull swarf away from the point of grind.	B-weight, latex	Aluminum Oxide
Norton A290	Provides consistent finish for dry sanding applications.	C-weight, paper	Aluminum Oxide
Norton A475	Ideal for use between sealer coats and for hard-to-sand surfaces.	B-weight	Silicon Carbide
Norton A975	For stripping and sanding paint, primers, bare wood, metal, and fiberglass.	C-weight for 80 to 120 grit B-weight for 150 and higher grit	Ceramic Alumina
Norton H875	For soft material applications, fiberglass, and composites.	E-weight, paper	Zirconia Alumina
Norton Multi-Air® Cyclonic™	Provide maximum dust extraction for virtually dust-free sanding. Flat, laser-cut holes maximize cut rate and disc life.	Fiber-reinforced latex/paper	Ceramic Alumina
ARC Abrasives Inc® PREDATOR®	Premium blend of proprietary grains and grinding aid for high performance with a fast cut and long life. Ideal for mild steel and carbon steel.	Y-weight, cloth	Ceramic
CUBITRON™ II	Precision shaped ceramic grain for faster cuts and long life. Ideal for stock removal on a wide variety of substrates.	C-weight, paper	Ceramic

Non-Vacuum H5933

PSA Paper Disc Rolls

Pressure Sensitive Adhesive (PSA) backing enables quick disc changes. Stearate coating reduces disc loading. For use on random orbital and rotary sanders. Use for all-purpose dry sanding and finishing applications. Use with PSA back-up pads, sold separately; search for "PSA Back Up Pads" on Grainger.com®.

Hook-and-Loop Sanding Discs

Hook-and-loop backing makes discs reusable and enables quick disc changes. Stearate coating reduces disc loading. Designed for use on random orbital and rotary sanders. Use for preparing primed and painted surfaces for finishing; stripping primer and paint; sanding plastic, fiberglass, and bare wood; light weld blending and deburring; and finishing all types of metal. Use with hook-and-loop back-up pads, sold separately; search for "Hook-and-Loop Back Up Pads" on Grainger.com®.

ARC J1056

PSA Cloth Discs

For maintenance and repair applications, from medium grinding to light deburring and finishing. Pressure-sensitive adhesive (PSA) offers fast, convenient disc mounting. Discs are made without center holes for full-face usage.

8" discs and smaller are designed for use on orbital sanders or vertical shaft grinders and must be used with PSA back-up pads, sold separately; search for "PSA Back-Up Pads" on Grainger.com®. Discs 9" and larger are designed for use on stationary disc sanders.

GRAIN SELECTION

Abrasive Grain Type	Application
Aluminum Oxide - General Purpose	General purpose metalworking applications
Zirconia Alumina - Heavy Duty	High rate of stock removal and long life in demanding applications
Ceramic - High Performance	High cut rate and long life on stainless, aluminum and other hard-to-grind materials

General Purpose Quick-Change Cloth Discs

- Aluminum oxide abrasive

Quick-change attachment system helps minimize downtime and improve productivity.

Norton Neon R766—Discs feature Y-weight polyester cloth backing and are excellent for stock removal, leveling, and blending applications on both contoured and flat metal surfaces.

Norton Metalite® R228—X-weight cloth backing. Use for general purpose applications.

Merit—For general use, including blending light welds, breaking edges, and removing parting lines and machine marks. Abrasive surface is laminated to a tough backing for exceptional durability.

3M™ 361F—For deburring, blending, leveling, and finishing all types of materials. Lock securely and unlock easily with just a half twist. Resin bonded for heat resistance. Heavy-duty cloth backing.

ARC Abrasives, Inc® AO Series—Y-weight backing. Use for general purpose grinding.

Heavy-Duty Quick-Change Cloth Discs

- Zirconia alumina abrasive

Note: More sizes and styles are available; to see Grainger's full assortment of quick change discs, go to grainger.com/quickchangediscs

ARC Zirc Plus—Self-sharpening zirconia alumina grain offers a consistent removal rate and features an additional grinding aid to reduce heat. Ideal for use on stainless and other heat-sensitive metals.

NorZon BlueFire—Self-sharpening zirconia alumina abrasive provides cooler cutting action and longer disc life than aluminum oxide. Heavy Y-weight backing. Great for grinding and deburring stainless steel.

High Performance Quick-Change Discs

- Ceramic abrasive

Note: More sizes and styles are available; to see Grainger's full assortment of quick change discs, go to grainger.com/quickchangediscs.

3M 987C—Precision-shaped ceramic grain for fast cuts with less pressure. Grinding aid minimizes temperature for heat-sensitive alloys. Use on virtually all metals; ideal for stainless steel and nickel alloys. Fiber backing.

3M Cubitron II 947A—The precision-shaped coated ceramic grain is self-sharpening, for consistent, long-lasting performance that resists loading. Excellent for deburring, blending, cleaning, and finishing applications. X-weight poly-cotton backing.

3M Cubitron II 984F—A durable edge backing provides extended edge retention. Precision-shaped ceramic grain is self-sharpening and has a grinding aid for cooler running, wet or dry. YF-weight polyester cloth backing.

ARC Abrasives, Inc. Predator—Premium blend of proprietary grains, plus a grinding aid, with heavy polyester backing. Ideal for grinding mild steel and carbon steel. Fast cut rate and long life. Y-weight cloth backing.

Norton R983—Ceramic grain with "supersize" grinding aid lubricant resists dulling, providing outstanding wear resistance and long-lasting cutting performance. Cloth backing.

Norton SG Blaze R980P—Improved ceramic aluminum oxide grain provides cool cut with fast cut rate. Durable polyester Y-weight backing. Treated with grinding aid for better part finish and integrity. Y-weight cloth backing.

Surface Blending Discs

COLOR	GRADE
Gray	Super Fine
Blue	Very Fine
Green	Fine
Maroon	Medium
Brown	Coarse
Black	Extra Coarse

Use on right angle or vertical shaft grinders to remove surface defects, flashing, rust and corrosion, paint, or scale. Also good for cleaning molds, blending mill and tool marks, and imparting finishes.

Merit and Scotch-Brite™—Aluminum oxide grit is excellent for finishing, cleaning, and light deburring; great for general purpose surface conditioning.

Norton Rapid Prep—Provide a smear-free finish, even on high nickel-content alloys; excellent for finishing and blending. Proprietary coating helps extend disc life.

Norton Vortex Rapid Prep—Proprietary aluminum oxide grain and coating help cut process times in half, and wear up to 4x longer. Provide a smear-free finish and will not load on aluminum and soft metals.

Scotch-Brite™ AL—Non-woven discs have open web construction for outstanding blending and finishing capabilities, and excellent loading resistance; last up to twice as long as standard discs.

NORTON MERIT 3M

Quick-Change Disc Back-Up Pads

Designed for use on vertical shaft grinders to provide the required support and locking mechanism. Use TS pads with Norton Speed-Lok® TS and Merit® Type 2, Standard Quick-Change™ discs. Use TR pads with Norton Speed-Lok TR, 3M® Roloc™, and Merit Type 3 discs. Medium density can be used for a variety of grinding and finishing applications. Use hard density for high-pressure applications and jobs that require heavy metal removal.

787C

3M

Roloc Fiber Discs

- Ceramic abrasive
- Pkg. qty. 10

Precision-shaped ceramic grain produces a faster cut and runs cooler for longer service life, increased production, and lower cost-per grind.

782C—An outstanding choice for grinding and cutting carbon steel.

787C—Engineered for use on stainless steel and non-ferrous metals, such as aluminum and titanium.
